INDEX

	TABLE No.	PAGE
INTRODUCTORY NOTES		vi
LAND AND CLIMATE		
Area of Kenya Colony and Protectorate	1	1
Area of provinces and districts, 1959	2	1
Lakes, mountains and national parks, 1959	3	1
Land classification, 1959	4	2
Rainfall: Main stations, 1959, compared with the average	5	2
Temperature: Main stations, 1959, compared with the average	6	5
Relative humidity: Main stations, 1959, compared with the average	7	5
Sunshine: Main stations, 1959, compared with the average	8	6
CONSTITUTION		
Legislative Council: Composition, May, 1960	9	8
Legislative Council: Analysis of membership, May, 1960	10	8
POPULATION AND VITAL STATISTICS		
Population		
Population in census years	11	11
Civil population estimates, 1946-59	12	12
Population Census, 1948		
Civil population by sex, age, nationality, religion, industry and occupation	13	11
Population of main townships	14	12
Population density by province, district and race	15(a)	15
Distribution of population of districts by density per square mile	15(b)	16
Main tribes	16	16
Main tribes by district	17	17
Non.African population : Average number of live births per woman ever married	18	18
African population: Average number of live births per woman	19	18
Vital Statistics		
Births registered, 19470-1959	20	18
Deaths registered, 1947-1959	21	19
Nairobi: Live births notified (residents), 1947-1959	22	19
Nairobi: Deaths notified (residents), 1947-1959	23	19
MIGRATION		
Arrivals		
Reported arrivals by all routes, 1938, 1947-1959	24	21
Reported arrivals: Analysis by method of entry and race, 1950-1959	25	21
Reported new permanent immigration, 1947-1959	26	21
Reported new permanent immigration, 1959: Analysis by race, sex and age group	27	22
Reported new permanent immigration, 1959: Analysis by race, sex and main occupation	28	22
Reported change of status: Visitors who are accepted as new permanent immigrants, 1950-1959	29	23
Departures		
Reported departures by all routes, 1938, 1947-1959	30	23
Reported permanent emigration, 1947-1959	31	23
Reported permanent emigration, 1959: Analysis by race, sex and main occupation	32	25
New permanent immigration and permanent emigration: Analysis of European aliens by nationality, 1954-1959	33	25
Visitors		
Visitors and persons in transit: Analysis by race and reason for visit, 1952-1959	34	26
Visitors and persons in transit: Analysis of Europeans by reported nationality, 1954-1959	35	26
EXTERNAL AND INTERTERRITORIAL TRADE		
External Trade		
Exports		
Volume and visible balance of external trade, 1954-1959	36	28
Domestic exports: Principal commodities by quantity and value, 1954-1959	37	29
Domestic exports: Principal commodities, percentage of total value, 1954-1959	38	29
Domestic exports: Value of principal commodities by countries of destination, 1957-1959	39	30
Domestic exports : Value by currency group. 1954-1959	40	31

	TABLE No.	PAGE
EXTERNAL AND INTERTERRITORIAL TRADE—(Contd.)		
Imports		
Net imports: Principal articles by quantity and value, 1957-1959	41	32-33
Imports: Value by currency group, 1954-1959	42	34
Imports and duty collected by S.I.T.C. sections, 1958-1959	43	37
Direct imports: Value of S.I.T.C. sections by principal countries of origin, 1958-1959	44	37
Retained imports: Classification by stage of production and use, 1954-1959	45(a-c)	38
External Trade Indices, 1955-1959		
Kenya: Indices of domestic exports	46	39
Kenya: Indices of retained commercial imports	47	39
East African Trade Indices	48	39
Interterritorial Trade		
Value of interterritorial trade, 1950-1959	49	40
Local produce and manufactures: Principal commodities exported to Tanganyika, 1954-1959	50	40
Local produce and manufactures: Principal commodities exported to Uganda, 1954-1959	51	41
Local produce and manufactures: Principal commodities imported from Tanganyika, 1954-1959	52	41
Local produce and manufactures: Principal commodities imported from Uganda, 1954-1959	53	41
East African Territories: Summary of trade in local produce and manufactures, 1958-1959	54	42
TRANSPORT AND COMMUNICATIONS		
East African Railways and Harbours Administration		
Railways—East Africa: Mileage of lines open for traffic, 1900-1959	55	44
E.A. Railways and Harbours: Revenue, 1948, 1954-1959	56	44
E.A. Railways & Harbours: Expenditure, 1948, 1954-1959	57	46
Rail, road and water transport: Passenger, livestock and goods traffic (East Africa), 1948, 1954-1959	58	46
E.A. Railways & Harbours: Capital Expenditure in East Africa, 1952-1959	59	48
Stocks of transport equipment held by East African Railways and Harbours (East Africa), 1951-1959	60	48
Shipping		
Kenya ports: Number of vessels entered, 1938, 1946-1959	61	49
Kenya ports: Net registered tonnage entered, 1938, 1946-1959	62	49
Passengers and cargo handled at Mombasa, 1938, 1946-1959	63	50
Air Traffic		
East African Airways Corporation: Operating statistics, East Africa, 1946, 1954-1959	64	50
Commercial aircraft movements: Passengers and freight handled at main airports, 1947-1959	65	51
Commercial aircraft: Direction of external traffic—arrivals, 1958-1959	66(a)	52

NOTICE

Though every care is taken in compilation, no responsibility can be assumed by the East African Statistical Department for the complete accuracy of all statistics contained in this Abstract.

In some tables individual figures will not necessarily add to totals because of rounding.

Throughout the tables the following signs have been used:—"—" means NIL, or less than half the final digit.

". ." means figures not available.

"()" means estimated.

INTRODUCTORY NOTES

LAND AND CLIMATE

The Colony and Protectorate of Kenya lies across the equator on the east coast of Africa. It is bordered by Ethiopia in the north, by the Sudan in the north-west, by Uganda in the west, and by Tanganyika in the south. It has a relatively long seaboard which is washed by the Indian Ocean.

The total area of Kenya is 225,000 square miles, including 5,000 square miles of water. It has, in fact, two water borders, since in addition to its littoral with the Indian Ocean, its boundaries between Tanganyika and Uganda run through Lake Victoria. There can be few countries of comparable size which contain such a variety of scenery, of climate, of people, and of types of economic and social development.

The seaboard of Kenya has a tropical climate and tropical vegetation. The coastal strip is narrow and inland the country rises sharply. Large plains of scrub and grass are found at a height of some 3,000 to 4,000 feet above sea level which are then followed by rolling uplands at altitudes of 5,000 to 8,000 feet, where the rainfall is sufficient to support plantation agriculture as well as mixed farming of both European and African types. There are, in addition, large areas of natural forests with streams fed from the slopes of some of the highest mountains in Africa. Through Kenya runs the unique Rift Valley, a natural fissure in the earth which stretches from Northern Syria, includes the Red Sea, and after running the length of Kenya, Tanganyika and Nyasaland finally reaches the coast in Portuguese East Africa. In Kenya the floor of the Rift Valley is at places up to 40 miles wide with walls rising several thousand feet to the surrounding hills and plateaux. In the north of Kenya is a huge desert which borders on Somalia and Ethiopia. This vast area of sand and waste stretches for 100,000 square miles, or nearly 50 per cent of the total area of the Colony and Protectorate of Kenya.

Kenya shares with her neighbours, Uganda and Tanganyika, Lake Victoria, the second largest inland lake in the world with an area of some 24,300 square miles. The lake lies at an altitude of about 3,800 feet and on it are numerous islands, some of which are scantily populated. Round the shores the land is densely populated.

The climate of Kenya is as varied as its physical structure. Rainfall and climate depend to a large extent on the height above sea-level, the distance from large areas of water, and also on the distance from mountains. In spite of its equatorial position, the climatic conditions range from the dry heat of the deserts to perpetual snow on the mountain tops. Kenya's position within the tropics ensures that seasonal variations in climate are limited. In certain parts of Kenya there is a wider divergence between the day and night temperatures than between summer and winter temperatures. Most parts of Kenya enjoy two rainy seasons, one of relatively long duration and the other short. It is, however, impossible to generalize about Kenya's climate.

By studying the meteorological tables in this Abstract it is possible to obtain a picture of the types of climate found in the main towns of Kenya, but it must be remembered that towns cover only a small part of the total range of climatic conditions. In Kenya there are now 900 units reporting rainfall daily to the East African Meteorological Department, 15 full-time weather stations reporting all major aspects of weather changes, and seven part-time weather stations reporting twice daily. Weather information from Kenya is co-ordinated with similar information from the neighbouring territories and reports are broadcast at regular intervals.

The vegetation and animal life of Kenya reflect the variety of its topography and climate. At the coast are found tropical plants, and in the reefs along the coast many kinds of tropical fish. A journey from the main port of Mombasa to the capital city of Nairobi takes one through the huge Tsavo National Park which covers 8,000 square miles and is a reserve for all kinds of wild animals from elephant and rhinoceros to giraffe, wildebeeste and zebra and down to the smallest of the deer and rodents. Plants, trees and birds are found in greater variety on the better watered foothills of the mountains than on the plains.

The total land mass of Kenya amounts to 220,000 square miles. Of this, 52,000 square miles are reserved for African occupation while alienated land, including townships and land held by, or available for, non-Africans, accounts for 14,000 square miles. More than half the total land area of Kenya consists of unsurveyed Crown land, mainly desert or semi-desert in the Northern Frontier District; 126,000 square miles are considered to be of little use economically. There are nearly 6,000 square miles of forest areas.

THE GOVERNMENT AND THE CONSTITUTION

The recorded history of Kenya dates from very recent times. Although the coast was visited by the Portuguese as early as the fifteenth century, the hinterland was not penetrated, except by a few explorers and missionaries, until the end of the nineteenth century, when the history of Kenya can really be said to begin. In 1888 a Royal Charter was granted to the Imperial British East Africa Company which thereupon took control of a wide area of what is now Kenya and Uganda with the purpose of developing the country commercially and abolishing the slave trade. Seven years later the Company was taken over by the British Government.

The first task in the opening up of the country and the abolition of the slave trade was the building of a railway. At that time Uganda was the centre of interest and the area through which the railway passed on its way to Lake Victoria was considered of little economic value. The railway was financed by the British Government and, starting from Mombasa in 1895, it reached Kisumu just six years later. The development of government and the rise of Nairobi as the centre of government has been described adequately in many books. It must be remembered that before 1920, when the East Africa Protectorate became the Colony of Kenya, the boundaries of the East Africa Protectorate and of Uganda were very different from those existing today.

The period from 1900 saw the formation of the first towns and settlements, the first European farms and missions, and the growth of an administration which had to contend with many problems.

Throughout the whole period political control has remained with the British Crown through Parliament and the Colonial Office, but within this framework there has been gradual constitutional development and the Lyttelton Constitution of 1954 introduced a multi-racial system of Government with ministers drawn from all races and eight seats in Legislative Council for African Elected Members. This was superseded in April, 1958, by what is known as the "Lennox-Boyd Constitution", details of which were embodied in the Kenya (Constitution) Order in Council, 1958.

(vii)

The present Constitution provides for a Legislative Council consisting of *ex-officio* Members, 36 Constituency Elected Members, Specially Elected Members (12 at the outset to be elected by the Council sitting as an Electoral College) and Nominated Members to maintain a working majority. The Council of Ministers consists of 16 members, of whom not more than 8 and no fewer than 6 shall be Public Servants. The Constitution also makes provision for a Council of State, consisting of a Chairman and 10 members to be appointed by the Governor and with certain powers of delay, revision and reference in regard to legislation which, in the Council's opinion, discriminates unfairly against members of any racial or religious community.

A conference was held at Lancaster House, London in January and February, 1960, to consider the next stage of constitutional development in Kenya. This conference agreed on certain proposed changes to the composition of the Legislature and the Executive which may be summarized as follows:—

(a) *The Legislature*.—There should be in the Legislative Council 65 Elected Members, 53 of whom would be elected on a Common Roll with a wide franchise, and 12 National Members to be elected by the Elected Members of Legislative Council. Twenty of the 53 Common Roll seats would be reserved for the minority communities allocated as to 10 European, 8 Asian and 2 Arab with communal primary elections. The Governor would retain the right to nominate members in order to enable the Government to maintain a working majority.

(b) *The Executive*.—The Council of Ministers should consist of 12 Ministers, of whom 4 might be official and 8 unofficial Ministers. The 8 unofficial posts should be filled by 4 Africans, 3 Europeans and 1 Asian and, in addition, there should be an Arab representative with the right to attend all Council meetings.

Following the conference the composition of the Council of Ministers under the existing Constitution was altered slightly and portfolios redistributed in order to allow for increased African participation. Four African Elected Members have now joined the Council, 3 holding ministerial portfolios and 1 as Assistant Minister.

Local government in the City of Nairobi and other municipalities and townships has been established for many years; the last seven years have seen notable advances in the formation and development of county councils and African district councils. There are seven county councils, twenty-six county district councils, six municipalities and twenty-six African district councils.

The East Africa High Commission, which was formed in 1948 to replace the East African Governors' Conference, consists of the Governors of Kenya, Tanganyika and Uganda and controls more than 20 departments providing services common to the three territories. These services include the East African Railways and Harbours Administration, the East African Posts and Telecommunications Administration, both of which are self-financing, the East African Customs and Excise Department, the East African Income Tax Department and a number of scientific, economic and advisory departments such as the East African Statistical Department and the East African Agriculture and Forestry Research Organization. The body responsible for legislating for these services and for approving their budgets is the Central Legislative Assembly consisting of representatives from each territory together with a number of *ex-officio* members of the High Commission who answer for the various departments and administrations under their control.

POPULATION

The seaboard of Kenya has long had settlements of traders from Asia, mainly from Arabia and Persia. The east coast of Africa was known for centuries before the birth of Christ and Arab sailors have used its harbours since ancient times. The Arabs predominate at the coast to this very day, while there were small settlements of Indian traders living in the coastal towns of East Africa long before the advent of the British administration. The main influx of the Asian population, however, followed the construction of the Uganda Railway with the opening up of commercial opportunities in the interior.

In the last 30 years migration from Asia, mainly from the sub-continent of India, has produced an Asian population which is now nearly five times the size of the Arab population and nearly three times the size of the European community. At the time of the 1948 population census the Asian population numbered nearly 100,000. It is estimated that by mid-1959 it had risen to 170,000, an increase of some 70 per cent over the eleven-year period. A considerable proportion of this increase has been due to immigration and the rest to the natural growth of the population which has a relatively high birth rate and a low death rate. The majority of the Asian population live in towns and other urban centres and are engaged in trade and commerce.

The European community has developed along two lines. The original settlers came out as pioneers to develop the Highlands, while others were recruited to form the administration and other services of Government and of commerce. Over one-third of the European population of Kenya now lives in the City of Nairobi, and there are about 3,000 European farmers and their families engaged in farming the Highlands. The total European population at mid-1959 was estimated at 66,000. The resident European population in earlier years consisted mainly of adult males and adult females, the children often being sent to the United Kingdom to school. This has seriously affected the development of the population pyramid, but at the present time there is an increasing proportion of European children in the Colony and the population pyramid is now approaching a more normal European pattern. In contrast, the Asian population pyramid shows that the resident Asian community has been established for a long period of time. There is a large base to the pyramid consisting of children up to the age of 15 years. There are relatively few elderly people because, until recent years, elderly people tended to return to their homeland. In the past the Asian community showed a considerable preponderance of men, although this unusual sex ratio has been reduced in the last ten years. In 1948 there were 137 Asian males to every 100 females.

The African population of Kenya consists of many tribes. The four main tribal groups account for only half the total African population. The largest tribe, the Kikuyu, inhabit the area between Mount Kenya and the Aberdare Mountains, and to the north and west of the capital of Nairobi. The second and third largest tribal groups are the Luo and the Baluhya who occupy areas to the west of Kenya on the shores of Lake Victoria. The Luo occupy the central and northern shores of Lake Victoria, and the Baluhya occupy the hinterland of North Nyanza. The fourth largest tribe is the Wakamba who occupy an area in Central Kenya to the east of Nairobi. The total number of main tribes recorded in the 1948 census in Kenya was 87 and there were 19 tribes each accounting for more than one per cent of the African population of the Colony. Most of these tribes have their own languages and social customs, but the lingua franca of East Africa is Swahili.

The study of the growth of the African population presents considerable difficulties because of the lack of basic statistical knowledge and the absence of registration of vital occurrences. But based on the researches carried out at the time of the 1948 census, and bringing together other surveys and studies made by anthropologists, sociologists and demographers, it is possible to make some estimates. At mid-1959 the African population, based on a growth of per cent per annum, was estimated at nearly 6,500,000. It is realized that this is an average rate for the whole of the Colony and that rates will differ in different tribes and geographical areas. Population growth was extremely small in the past due to the many endemic diseases and the famines which raged throughout the Colony. The increase in population growth has been relatively rapid and the development might be even faster in the future with the extension of medical knowledge, hospitals and hygiene services. The results of population censuses held in recent years in Tanganyika and Uganda suggest that the African population in Kenya is increasing at a higher rate than the 1½ per cent per annum on which present estimates are based.

The age distribution of the African population of Kenya is of great importance in considering economic development. Forty. eight per cent of the African population of Kenya are children estimated to be under 16 years of age, 43 per cent are adult males and females up to 45 years of age and 9 per cent are elderly people taken to be over 45 years of age. The percentage of children reported may be slightly too high. It will be seen that there is a great preponderance of children in this population, which is an indication not so much of a high birth rate as a high death rate in previous years. It is, therefore, necessary if children are to be taken out of the working group and placed in schools, for the adult male population to increase its output, since the efforts of a few will have to be distributed in economic return among many.

A sample census of the City of Nairobi, which was carried out at the end of 1957, revealed that the total population residing in the city was approximately 222,000, made up of 115,000 Africans, 22,000 Europeans and 85,000 Asians and other communities. The total population of Nairobi increased by 86 per cent between 1948 and 1957, although the rate of increase was by no means uniform for the three racial groups.

MIGRATION AND TOURISM

The statistics of migration in 1959 maintained trends which have been established for several years. The total of new permanent immigrants (including visitors who subsequently became permanent immigrants) which has shown a downward trend since 1955, fell again in 1959. This was, however, entirely due to a fall in the number of European visitors who became permanent immigrants; work was not easy to obtain in 1959 and it seems likely that more people than usual who came to Kenya expecting to find employment were disappointed. Again, there was a rise in the number of reported permanent immigrants; 3 per cent more Europeans and 12 per cent more Asians left the Colony permanently in 1959 than in 1958. The net result of these changes was an increase in the European population of just over a thousand, and an increase of nearly two thousand in the Asian population.

There was very little change in the age composition of permanent European immigrants, 30 per cent of whom were in the age group 20.29 and 18 per cent between 30.39. Some 20 per cent of the total immigrants stated that they were taking up work of a professional, technical or managerial nature, or else were joining government service. Some 62 per cent were not classifiable by occupation. The magnitude of this figure is partly explained by the fact that it includes housewives and children and also large numbers of Asians who come to Kenya with the object of joining their families and assisting in the family business. For Asians only the "not classifiable" figure was 2,996, or 74 per cent of the total.

The migration statistics suggest that the tourist trade enjoyed a good year in 1959. Compared with 1958, there was an increase of nearly 4,000 in the visitors to Kenya and persons "in transit", and an increase of some 14 per cent in those who stated they were on holiday. Some 20 per cent of visitors and persons "in transit" spent between one and three weeks in Kenya and a further 17 per cent, or considerably more than five thousand people, spent more than three weeks in the Colony.

There was also quite a sharp increase in the number of persons who came to Kenya by air. In 1959 more than 42,000 persons arrived by this method of transport, 16 per cent more than in 1958.

EXTERNAL TRADE

The value of Kenya's external trade increased in 1959 after a definite decline in 1958. This increase was brought about by greater exports and re-exports with little change in the value of imports retained in Kenya during 1959. As a result of the increase in exports there was a reduction in the adverse visible balance of trade from £27.7 million in 1958 to £23.1 million. The decreased balance of trade at £23.1 million was the lowest in Kenya for several years and was financed by the provision of services for neighbouring territories together with tourism which both provide invisible exports, and by the inflow of capital funds. Except for 1957, exports from Kenya have increased in value each year during the past five years. Between 1958 and 1959 the value of domestic exports rose by 14 per cent, to a total of £33.3 million. This increase in value was due mainly to increases in the quantity of exports; prices of exports were generally at a similar level to the previous year. A welcome increase in the price of sisal in 1959 was offset by less attractive prices for a number of other products. The major exports of coffee, tea and sisal each increased in value during 1959. There was also an increase in Kenya's re-exports from £3.9 million to £5.1 million in 1959. This expansion in re-exports continues the trend which had been apparent during the previous five years.

While the total of imports retained in Kenya changed little between 1958 and 1959, there were a number of changes in the composition of imports. Goods imported by Government continued to decrease during 1959, both on account of capital and consumer goods. Only Government imports of spares and accessories showed a definite increase. The total value of Government imports fell from £4.5 million in 1958 to £3.8 million in 1959. In 1958 there had been a distinct fall in the value in goods imported on private account. This decline was arrested in 1959 and, indeed, there was a modest increase in commercial retained imports to £52.6 million. Imports by Parcel Post continued to decline in 1959, as did imports of producers' materials, but these reductions were more than offset by increased purchases of consumer goods, capital goods, spares and accessories. Kenya had to pay import prices which were 5 per cent higher in 1959 than in 1958. Since the value of private imports was maintained it follows that there was a reduction in the quantity of goods imported. Machinery, transport equipment and manufactured goods together comprised 56 per cent of Kenya's imports; all showed increases in prices during 1959 at the same time as a reduction in the quantities imported.

Following the trend of recent years, Kenya's trade with the neighbouring territories of Tanganyika and Uganda continued to expand. Information about interterritorial trading cannot be complete in the absence of strict Customs control on the roads joining these territories. The recorded information for 1959 showed an increase in imports from both Tanganyika and Uganda together with a greater value of exports to each of these territories.

While the Commonwealth continued to be Kenya's best customer and also its main supplier, its proportionate share in Kenya's trade continued to fall in 1959. In 1954 the Commonwealth purchased 58 per cent of Kenya's exports. By 1959 the proportion had dropped to 44 per cent. This was not so much due to a reduction in purchases by the Commonwealth, but rather to increased purchases by other countries. Of recent years Western Germany, the United States of America and Japan have all increased their purchases from Kenya substantially.

TRANSPORT AND COMMUNICATIONS

Railways and Harbours

During 1959, the East African Railways hauled a smaller tonnage of goods and carried slightly fewer passengers. These reductions amounted to 2 per cent or less. In spite of this fact, the revenue from passenger traffic was maintained at £2.1 million, and revenue from goods traffic increased by nearly 4 per cent to over £15.1 million. The increased revenue from goods traffic was due to changes in the rating structure. There were also compensating alterations to charges at Mombasa port, designed to encourage shipping to work within normal working hours. Harbour revenue throughout East Africa increased by 3 1/2 per cent in 1959 to a total of over £4 1/2 million. The increase in harbour revenue was due to the greater tonnage of exports handled during the year.

Airways

Aircraft passengers handled at Nairobi increased by over 14 per cent in 1959, compared with a per cent increase during the previous year. At the same time there was an increase in freight traffic of nearly 20 per cent which more than offset the reduction in 1958. It was noticeable that the greater weight of goods carried by air was spread over freight as well as post office mails. Incoming air-freight increased, but not as rapidly as freight leaving Kenya. The increase was evenly distributed over nearly all the routes to and from Kenya.

Road Vehicles

The number of motor vehicles licensed in Kenya continued to increase during 1959 to over 77,000 vehicles, an increase of 6 per cent. Registration of new vehicles increased by over 5 1/2 per cent. In both cases the rate of increase was less than in the previous year. Imports of motor vehicles fell slightly in 1959, while imports of bicycles increased substantially over the low level of the previous year.

During the past four years the mileage of roads with bitumen surface in Kenya has increased from 350 miles to 530 miles. During 1959 a start was made on a £4 million road scheme, financed by the contractors. This road building programme will give added impetus to the progress of bitumen surfacing during 1960.

There was again an increase in traffic accidents during 1959 after the reduced number of accidents in 1957 and 1958.

Postal Services and Telecommunications

Compared with the previous year, 1959 letter traffic in Kenya increased by 8 per cent, while parcel traffic fell by 2 per cent. The number of telephones in use continued to expand rapidly (9 per cent) while telegraphic traffic fell slightly. Due entirely to increased revenue from telephone services, total revenue increased by 4 per cent during the year. Operating expenses increased at a slightly faster rate.

AGRICULTURE

During 1959 agriculture in Kenya received a greater cash return for its products than in any previous year. This was mainly due to increased production of plantation crops and of livestock and livestock products. Prices were generally maintained during the year. As a result, 1959 was a better year for agriculture than 1958, which had been a distinctly difficult year. As in 1958, African agriculture made substantial advances, with progress in consolidation of land and in better farm planning. The cash income received by African farmers in 1959 was 19 per cent higher than in 1958.

In contrast to the general development of agriculture, cereal production remained depressed during 1959. Production decreased, partly due to poor rains at the end of 1958 and during early 1959, and partly because of lower guaranteed prices. Good weather during the preceding seasons had resulted in a surplus of maize for export at prices unattractive to cereal producers in Kenya. Export surpluses of maize had the effect of depressing guaranteed prices in the following season. Under new arrangements made in 1959 it is only the price for maize sold locally which will be guaranteed in advance; it is hoped that this will provide an element of greater stability in cereal prices in the future.

The main feature of coffee production was the larger proportion of the total coffee crop grown by African farmers. The Swynnerton Plan for developing African agriculture has now gathered momentum and is resulting in a rapid growth in the cash income of farmers. This is particularly noticeable in the case of coffee, Kenya's principal export. It is likely that the proportion of Kenya coffee produced by Africans will continue to increase, due to the potential production already planted but not yet bearing. In 1959 the acreage of coffee planted by Africans had reached 26,000 acres, compared with 68,000 acres on non-African farms and estates.

Both tea and sisal production increased during 1959, accompanied in the case of sisal by a welcome rise in price following the low price level existing for some years previously. Neither of these crops is yet significantly large in the African farming sector, but planting of tea on African farms continued during 1959 and will provide a major source of increased revenue in the future. Pyrethrum also did well during 1959. In spite of increased deliveries, from 3,800 tons in 1958 to 4,800 tons in 1959, the Pyrethrum Board was still unable to meet the anticipated demand. The increased deliveries of pyrethrum by non-African farmers was matched by a substantial increase in planting of pyrethrum by African farmers.

During 1959 the price for livestock and livestock products was generally maintained, in spite of the necessity to market increased production. 1959 saw a considerable advance in the promotion of exports of livestock products, including the export of animals on the hoof to neighbouring territories and to the Arabian Peninsula. On non-African farms the number of dairy cattle increased by 4 per cent during the year and there was a record proportion of cows in milk. The beef herds on these farms increased by 6 1/2 per cent between 1958 and 1959, with an increase of over 26 per cent in the number of cattle sold for slaughter during the year. The sheep population showed an annual increase of over 12 per cent to 548,000 head on non-African farms.

The wool clip increased by 16 1/2 per cent to over 2.1 million lb. in 1959. For the first time for many years there was a drop in the pig population. This was due to uncertain prices during 1958 and early 1959. By the end of 1959 both prices and production showed signs of stabilizing.

MINING

The total value of Kenya's mineral production—excluding cement and the mineral constituents of cement—rose from £2.2 million in 1958 to £2.8 million in 1959. Increased sales of soda ash from Magadi amounted to 153,000 long tons in 1959, compared with 111,000 tons in the previous year. The value of sales increased by nearly million to £1 3/4 million. Soda ash still represented over half the value of the Colony's total mineral production. Copper production at the Macalder-Nyanza Mine was at the same level as in 1958, with a recovery in the price of copper during 1959. The 1,982 tons of copper produced in 1959 were valued at £458,000. The comparable figures for 1958 were 1,988 tons and £383,000. Gold and silver were produced in slightly larger quantities than in the previous year although the combined value of these two minerals amounted to less than £130,000. No other mineral could be regarded as of great economic importance.

No new mineral discoveries were made during the year and no new development schemes were inaugurated.

(X)

FUEL AND POWER

Electricity

The bulk supply of hydro-electric power from Uganda to Kenya commenced on 1st January, 1958, with the result that production from thermal electric stations serving Nairobi was reduced and some of the plant sold. During 1959 the supply of electricity from Uganda was extended to additional towns in Kenya. Imports from Uganda during 1959 amounted to some 129 million kWh, an increase of 44 per cent over 1958. This represented 36 per cent of the total units, both generated locally and imported. In 1958 electricity imported from Uganda comprised 27 per cent of the total units.

There was a further slight decrease in Kenya's installed capacity and for the first time there was a reduction in electricity imported from Tanganyika which amounted to 21.7 million kWh in 1959 as compared with 24.0 million kWh in 1958.

Total units generated and imported rose from 328 million kWh in 1958 to 363 million kWh in 1959, an increase of 11 per cent over the previous year. The demand for electricity in Kenya continued to expand faster than the economy as a whole; indeed, the rate of increase in this demand was slightly higher than in 1958.

Fuels and Lubricants

The sale of motor spirit rose from 31.7 million gallons in 1958 to 33.0 million gallons in 1959, an increase of a little over 4 per cent. During the same period, the sale of light diesel fuel rose from 18.0 million gallons to 20.8 million gallons, an increase of almost 15 per cent. During the past few years there has been a higher percentage increase in the number of diesel vehicles than of petrol driven vehicles, and an associated increase in the sale of diesel oil. With the implementation of the 1960/61 Budget proposals, however, under which the tax on diesel oil is to be increased, it is unlikely that the consumption of diesel oil will continue to increase as rapidly as in recent years.

COMMERCE AND INDUSTRY

Commerce

Following the decline in trading activity during 1958 there was an increase in the value of turnover during 1959, according to the available statistics. The value of imports retained in Kenya during 1959 was the same as in the previous year, but import duty on these goods increased during the year, giving an increased value when sold locally. Imports from Tanganyika and Uganda increased in value during the year, and exporters handled a larger volume and value of exports. On the supply side, therefore, all the indications showed an increase in turnover in 1959 after the recession of 1958. The greater value of supplies was matched on the demand side by a greater purchasing power from employment, and by an increased cash revenue from agriculture, particularly African agriculture.

Industry

After the rapid advances in secondary industry in Kenya, during the previous five years, 1959 was a year of little change compared with 1958. Certain types of manufacturing continued to expand, including the production of consumer products such as beer, cigarettes and tobacco. In other industries, however, the level of employment fell during 1959. As a result there was no increase in employment in manufacturing industries as a whole.

The most important new development during the year 1959 was the decision by the Shell Group to establish an oil refinery designed to meet the domestic needs of East Africa and to provide a surplus of certain products for export. Another important primary project, in which a consortium of local interests and a large European steel concern are associated, is the proposed establishment of a smelting furnace and rolling mill in the Colony. Basic materials will be iron and steel scrap from local sources and production will initially cover reinforcement bars, mild steel rounds, together with small profiles and sections.

BUILDING

The year 1959 saw some revival in building activity after the downward trend of the previous two years. The value of recorded private building work completed rose from over £91 million to £10.7 million, an increase of nearly £1.6 or 17 per cent, but was still well below the peak figure of £12.1 million in 1956. Residential building made only a small contribution to the year's increase. Completions of new non-residential buildings in the six main towns, on the other hand, were higher than in 1958 by over £1 million, of which Nairobi accounted for some £875,000 and Mombasa some £150,000. The combined value in the six main towns was almost the same as in 1956. In terms of floor area, however, the 1956 level was far from regained; all categories of commercial and industrial building were still significantly lower and the marked rise in other types of non-residential building only offset this to a limited extent. In the public sector building was little more than maintained at the 1958 level.

CURRENCY AND BANKING

During the twelve months ended June 1959 the value of East African currency in circulation fell for the second year in succession. The total circulating in East Africa, British Somaliland and the Aden Protectorate declined by £1.4 million: currency in circulation in the four East African territories alone fell by £2.0 million. Commercial bank holdings of cash accounted for half this amount and most of the fall took place in Kenya. Thus cash in the hands of the public also fell by about £1 million over the period. Similarly, the index of debits to current accounts in Kenya showed a reduced turnover of cash up till the first quarter of 1959, but a marked increase thereafter as economic recovery gained momentum. Over the calendar year 1959 commercial bank deposits in Kenya showed a big increase in contrast to the rather static position over the three previous years. Most of the increase was in demand deposits, with £1 million out of the £4 million increase on Government account, but time and savings deposits also rose. Similarly, loans, advances and bills discounted rose again after the fall in 1958; a small increase in loans to industry brought that figure to a new peak; loans to agriculture fell slightly but remained high. Investments in East Africa continued to rise and reached a record level.

The Kenya Land Bank's balance of loans outstanding continued to expand.

Deposits in the Kenya Savings Bank were at a rather higher level than in the previous two years and withdrawals were again smaller, so that net withdrawals were the lowest for four years.

The Currency Board's holdings of securities are given in revised form to show the increase in local issues held since 1956 when the Board first made such purchases.

PUBLIC FINANCE

The figures of Kenya Government revenue and expenditure for 1959/60 are the original estimates presented in April, 1959. Estimates of the probable out-turn made towards the end of the financial year indicate that Colony expenditure is likely to have been slightly less at £32 million while development expenditure was still estimated at £9.6 million. Savings on Colony expenditure estimates were expected from smaller contributions to High Commission services, it having been agreed to run down Kenya's surplus with the High Commission, and from postponement of interest on Exchequer loans, payment being due annually instead of half-yearly. Thus neither source of saving will recur. Colony revenue in 1959/60 was expected to approximate closely to the original estimates, a shortfall on collections of personal tax being made good by increased miscellaneous receipts.

The 1960/61 estimates as presented indicate no increase in Colony expenditure. This is, however, an accounting phenomenon arising largely from the winding-up of the Emergency Fund which, while in operation, had increased the amount of double-counting in the accounts. The totals obtained by re-analysis and shown in Tables 122 (b) and 124 show that provision is made for continued increases in aggregate expenditure on balance. On the one hand, much reduced provision is made for former Emergency expenditure, now absorbed into departmental heads (£0.5 million against £1.6 million in 1959/60); additionally, no provision is made for the recurrent costs of the East African Land Forces (£1.1 million in 1959/60) which will in future be borne by Her Majesty's Government. Against this, increased provision is made under three major headings and a miscellaneous group of small heads. First, there are increases totalling £0.55 million in commitments, mainly statutory, e.g., interest on the public debt, pensions and contributions to local authorities. Secondly, there are increases in expenditure on the social services, particularly African and other education, only partly offset by increased Appropriations-in-Aid, which give a net increase of £0.65 million. Both these increases are in line with existing trends and further increases are to be expected in future years. The third group of major increases is in administration and maintenance of law and order. The increase is smaller (£0.4 million) and it is hoped to hold future expenditure to the currently budgeted level.

Revenue from direct taxation in 1960/61 is not expected to differ materially from receipts in 1959/60 since, although incomes in 1959 (taxed in 1960/61) were higher than in the previous year, 1958/59 collections were swollen by the recovery of arrears. The yield from indirect taxation is expected to increase in line with the resumed growth in money incomes and also from proposed increases in rates of duty. Apart from minor changes in protective tariffs, these comprise a small increase in the consumption tax on petrol and the imposition of customs duty and consumption tax at the same rates as for petrol on light diesel oil, hitherto exempt. These came into effect provisionally immediately following the introduction of the 1960 Budget. Proposals for a partly compensating reduction in licensing fees for diesel vehicles to take effect in 1961 were also introduced, together with an increase in the licensing fees for light vehicles. In a full year the statutory grant to the Road Authority resulting from these changes would be increased by some £0.2 million and general revenues by £0.45 million. The latter will be taken up to meet loan charges on capital road works.

During 1959/60 no new loans were raised on the London market. Development was financed as to £4 million by Exchequer loans and £2,225,000 was raised locally. An agreement with the World Bank provides for a loan of £2 million, guaranteed by Her Majesty's Government, to be applied to the financing of the £6 million agricultural programme included in the 1960/63 Development Programme of which £2 million is for increased credit and improved feeder roads in areas of high potential. It is estimated that in addition £6.5 million will have to be raised during 1960/61 by Exchequer loans, public issues or short-term borrowing. Provision will also have to be made for the conversion or repayment of the 4 per cent loan of £2,925,000 raised locally in 1954. In addition to the capital projects covered by the Estimates, work on the £4 million Contractor Financed Road Programme will continue and expenditure is estimated to amount to £1 million during the year.

DOMESTIC INCOME AND PRODUCT

The year 1959 saw an increase in the gross domestic product, monetary and non-monetary sectors combined, of some £7 million or 3 1/2 per cent from £208 million to £215 million. The increase for the monetary sector alone was nearly 5 per cent. The increase *per capita* (monetary and non-monetary sectors combined) was about 2 per cent and, since prices remained relatively unchanged, the real growth in gross domestic product, allowing for changes in population and prices, was also in the order of 2 per cent per annum. Although this is not a large growth figure, it compares favourably with 1957 and was a great improvement on the decline registered in 1958.

The recovery between 1958 and 1959 was also important, inasmuch as the growth was distributed through most sectors of the economy. While the manufacturing and building and construction industries remained static, all other sectors contributed to and benefited from the overall increase in gross domestic product. Agriculture and livestock production continued to take the largest share of the domestic product, which in percentage form remained virtually unchanged between 1958 and 1959. This apparent stability, however, conceals the fact that the imputed value of subsistence production in agriculture proper (excluding all related activities) fell slightly in absolute terms largely as a result of the lower prices received for maize.

Considering the monetary economy only, the percentage share of agriculture and livestock increased fractionally. In absolute terms the contribution of agriculture and livestock to gross domestic product amounted to £35.5 million in 1959 as against £33.4 million one year earlier, an increase of some 6 to 7 per cent. This reflects the higher level of agricultural production and increased turnover in almost all the major crops and livestock products. A notable exception to this was maize, the price of which in 1958/59 was fixed at a lower level than in 1957/58 and the production of which also declined.

Retained imports on commercial account in 1959 were much the same as in 1958, but there was, nonetheless, a small increase in turnover and hence in the contribution of wholesale and retail trade to gross domestic product. In general, however, the improvement in agriculture had a limited effect on the level of trading activity, a situation which would appear to result in part through a time-lag in the operation of the increased purchasing power, and in part from a reluctance on the part of traders to build up stocks to the level from which they had fallen prior to the onset of the recession in 1958. There is evidence that in certain trades, notably motor vehicles, a considerable amount of destocking took place during part of 1959.

Income

The share of the domestic product accruing in the form of wages and salaries remained constant at about 41 per cent between 1958 and 1959, although in absolute terms it increased by nearly £3 million from £85.5 million to £88.4 million. This increase was spread fairly evenly between the private and public sectors. Gross profits, before depreciation but excluding rental surpluses (£66.5 million), were some £3.6 million up on the previous year. Most of this increase may be attributed to the private sector. All industrial groups shared in this expansion, with the exception of manufacturing industry, but the most significant increase affected agriculture and livestock production where the operating surplus rose by nearly 10 per cent from £22.2 million in 1958 to £24.2 million in 1959. Within this overall increase profits earned by African farmers rose by well over £1 million, or nearly 20 per cent. The amount earned in the form of rental surpluses also increased by some £3/4 million between the two years.

CAPITAL FORMATION

The figures of gross capital formation for 1959 indicate a revival in capital expenditure, following the break during 1958 in the previous upward trend, occasioned by the diminution in Emergency expenditure, the completion of a number of large-scale projects in the public sector and uncertainty in the private sector arising from poor business conditions. Total capital expenditure in 1959 is estimated at £43 million, a rise of £2.5 million compared with 1958, but still well below the peak of £47 million in 1957. In the public sector as a whole there was a small increase of about million. Private capital expenditure rose by about £2 million to £29 million; increases in building, particularly non-residential, and in purchases of machinery and equipment being partly offset by reduced purchases of transport equipment.

RETAIL PRICES AND COST OF LIVING

During 1959 and the first half of 1960 prices showed only a slight tendency to increase. Between February, 1959, and April, 1960, the Nairobi Cost of Living Index (excluding rent), rose by two points, or less than one per cent.

The food, drink and tobacco group rose by four points as a result of increases in the price of local produce, particularly bacon, fish and certain types of meat. The miscellaneous group rose by seven points, reflecting increases in the price of automobiles. There were also increases in the price of imported spirits, locally produced beer and cinema charges, resulting from changes in taxation announced in the 1959 Budget. Offsetting these were falls in domestic servants' wages and a slight reduction in the price of petrol.

Whereas the Nairobi Cost of Living Index measures the changes in living costs for those people earning about £1,000 per year, it has long been realized that a similar index was required to measure the changes in living costs of the lower paid workers. A Wage Earners' Index of Consumer Prices, which was constructed from the results of the survey of income, expenditure and consumption patterns of the African in Nairobi, carried out in 1957/58, has now been introduced. The index is based on October to December, 1958 = 100, and although it applies mainly to those persons whose incomes are less than Sh. 350 per month, it can be considered as having a wider application to all persons with a standard of living roughly comparable to that income group.

During 1959 and the first quarter of 1960, this index rose by one point. Mid-year increases in the price of beer, which caused the beverage and tobacco group to rise by three points, and the increased clinic attendance fees announced by the City Council in July were mainly responsible for this rise. The food group, which carries two-thirds of the total weight in the index, remained unchanged on account of constant prices for the important items of posho, milk and beef.

EMPLOYMENT AND EARNINGS

The number of persons reported in employment in 1959 rose by a little less than 4,000 to 597,000. Although the increase was common to all races, it was not evenly spread either racially or industrially.

Agricultural employment, which accounts for well over 40 per cent of the Colony total, increased by some 2,000, although there was a small drop in the numbers of Europeans employed.

The total number of persons employed in private industry and commerce remained very much the same as in the previous year, but within this general classification increased employment in commerce was offset by falling employment in the building and construction industry (for the second year in succession), and a fairly sharp fall in the numbers employed in the food manufacturing industry. For the group as a whole these marginal changes were reflected in slightly increased employment of Europeans and a small decrease in the number of Africans employed.

The overall rise of some 2,500 persons in the public service was largely accounted for by the increase in the number of Africans employed by the Kenya Government.

Employment in the nine main towns of Kenya rose in 1959 by about 3 per cent, increases up to 20 per cent in Eldoret and 15 per cent in Nakuru being recorded. There were partly compensating falls in Mombasa (5 per cent) and Kisumu. Urban employment in 1959 accounted for a third of the total employment in the Colony.

During 1958 changes took place in the statutory minimum wage payable in the nine urban centres, reflecting both movements in living costs and a further advance towards the target of an adult minimum wage of 1.67 times that of the youth minimum wage, and a housing allowance equal to the cost of two municipally-rented bed-spaces. A further step towards the attainment of the aims of the 1954 Sessional Paper was made in the new rates which became effective on 1st July, 1959. These showed rises in the basic rates for adult males of between Sh. 3 in Nanyuki and Sh. 7 in Eldoret, Nairobi and Kitale. The Thika rate remained unchanged at Sh. 94. Increases in the adult housing allowances range from Sh. 1/50 to Sh. 3 per month as between the nine towns. No change was made in the minimum housing allowance for males under 21 or for women.

EDUCATION

African Education

The provision of education for Africans continued to expand rapidly in 1959, although attendance at schools by Africans is not compulsory. One hundred and ninety nine new schools for Africans were opened, bringing the total of African Primary and Secondary Schools up to 4,742. The number of pupils attending primary, intermediate and secondary schools rose to well over 671,000, an increase of more than 66,000, or 11 per cent over the previous year. The number of girls schools increased at a slightly faster rate than for the African school population as a whole.

The Central Government spent nearly £2,538,000 on African education in 1958/59, of which £2,162,000 consisted of grants-in-aid and £275,000 was devoted to buildings. Government revenue in tuition and boarding fees amounted to £7,000, and in addition fees totalling nearly £801,000 were collected by Regional and District Education Boards.

There were 43 Teacher Training Schools for Africans in 1959, attended by more than 3,800 students. During the year there were 5 vocational schools with over 1,200 students enrolled.

Asian and Arab Education

It is compulsory for Asian boys in townships to attend school from 7 to 15 years of age. Three new Asian schools were opened during 1959, and several Asian primary schools have begun to provide secondary modern courses. As a result, the numbers of pupils being taught at secondary level rose by 19 per cent in 1959. The total number of pupils enrolled in all Asian schools in 1959 was 50,100 of which 54 per cent were boys.

The number of Asian students at the three teacher training schools again increased in 1959, from 268 to 346.

Government expenditure on Asian education in 1958/59 was nearly £1,093,000, of which £89,000 was spent on buildings, either directly or in the form of grants.in.aid. £178,000 was received in boarding and tuition fees.

Education for Arab children is provided separately, but is not compulsory. Nearly 2,600 children attended primary schools and of these 30 per cent were girls, very few of whom continue their formal education beyond this stage. There are now two secondary schools available to Arab boys, and 269 boys were being taught at this level in 1959. The Government spent £92,000 on Arab education in 1958/59.

European Education

There is compulsory education for European children of Kenya residents between the ages of 7 and 15 years. In addition, the schools at present provide limited facilities for European children from certain other East African territories and also for the children of members of H.M. Forces in East Africa. The number of European pupils increased from nearly 11,400 in 1958 to over 12,400 in 1959.

Direct expenditure by Government in 1958/59 on European education amounted to nearly £1,006,000, of which some £152,000 was spent on school buildings. Government revenue in boarding and tuition fees amounted to just under £509,000 during the year.

Higher Education

The number of Kenya students of all races following various courses of higher education increased during 1959; 175 students from Kenya were studying at the Royal Technical College of East Africa during the year 1958/59, 354 were attending Makerere College, Uganda, and a further 1,731 students were enrolled at institutions for higher education overseas.

Library Service

During 1958/59, 17,938 books were issued to readers in the Postal Library Service of the Kenya Branch of the East African Literature Bureau. The readers choose their books from a catalogue of about 4,000 books. On examining the percentages of the books issued, an interesting fact emerges—the increasing number of books borrowed from the Fiction Section. The figures for the year 1956/57 showed that 20.1 per cent of the books borrowed were fiction. In 1958/59, the percentage was 30.8 per cent, an increase of 10.7 per cent in two years. This shows that people are reading more for pleasure.

CONSTITUTION

Table 9

LEGISLATIVE COUNCIL: COMPOSITION

COMPOSITION UNDER THE KENYA (CONSTITUTION) ORDER-IN-COUNCIL, 1958. AT 31ST MAY, 1960 (THE LENNOX-BOYD CONSTITUTION ADJUSTED UNDER THE "CARETAKER GOVERNMENT" CONSEQUENT UPON THE LANCASTER HOUSE CONFERENCE)

The Speaker.
Ex-Officio Members (not less than 4).
Constituency Elected Members—36.
Specially Elected Members—12.
Nominated Members—38 (subject to adjustment).

Ministers are appointed by Royal Warrant.
Assistant Ministers are appointed by Instrument by the Governor.
Ex-Officio Members are persons holding Public Office.
Constituency Elected Members are elected in accordance with the Laws of Kenya.
Specially Elected Members are elected by the Members of Legislative Council sitting as an Electoral College.
Nominated Members are appointed by Instrument by the Governor.

LEGISLATIVE COUNCIL: ANALYSIS OF MEMBERSHIP (31st May, 1960)

POPULATION AND VITAL STATISTICS

Notes and Definitions

Population statistics for the 1948 census relate to the *de facto* civil population only. Wives and families of members of the armed forces are included, and in previous censuses it is believed that this same breakdown was followed. The non-native population count was made on the night of the 25th February, 1948, but the African population was enumerated during the week commencing 23rd August, 1948. For areas in the Northern Frontier Province, Samburu District and the East Suk Area of Baringo District, estimates have been made in lieu of a census enumeration.

In developing territories, intercensal changes are due partly to increases in population and partly to improvement in the organization of census taking. The improvement in the general organization since 1911 must be taken into consideration when studying the percentage increase in the population since that date. No quantitative appreciation of the increase due to this improvement can be made.

The statistics have for simplicity been shown to the nearest unit in most instances, but this degree of accuracy is not assumed.

Race

The term "Indo-Pakistani", when applied to a race, refers to those persons whose ancestors were resident in the sub-continent of India. It is a purely descriptive term, and excludes persons from the Portuguese territory of Goa.

Townships

The statistics of the urban population are based on those householders reporting residence within township boundaries, which, due to frequent changes, are not always well known by residents. For this reason, the statistics quoted for certain townships may be only approximate.

Population Estimates

Estimates of the population for years following 1948 were made as follows. The results of the 1948 census were used as a base; a natural increase of 1 per cent for Europeans, 2 1/2 per cent for Asians and 11/2 per cent for Africans per annum was added to the census totals. Estimated immigration and emigration for each of the non-native races was then computed and used to adjust the base figures allowance being made for the under-enumeration of emigrants. Persons who entered as visitors and later became permanent residents were included. The number of unknown factors involved make these estimates subject to some error, but it is believed that they furnish a reasonable indication of the changes in population in the years since the 1948 census.

Vital Statistics

The statistics of births and deaths maintained by the Registrar-General may be considered reliable in respect of European and of Asian births, but those of Asian deaths undoubtedly understate the true position to a serious degree. Statistics of late registrations i.e., registrations of birth made more than six months after the event and of death more than one month after the event, are excluded. The coverage by the Registrar-General of vital statistics of the African community is limited to the registration of deaths in urban areas (excluding Nairobi).

The tables of births and deaths in Nairobi are compiled from notifications of births and deaths to the City Medical Officer of Health; the figures shown relate only to residents of Nairobi.

*The statistics of the population residing within township boundaries are based on those census schedules showing residence in towns. As boundaries are not always known by householders it is possible, especially in the case of the African population, that the statistics are not entirely consistent.

Estimated population of Nairobi as at mid.1959: Europeans 23,500; Asians and other Non-African 92,000; Africans 123,000; total 238,500.

Estimated population of Mombasa as at mid.1959: Europeans 4,500; Asians and others 33,650; Arabs 21,000; Africans 93,000; total 152,150.

*No census of Africans was taken in the Northern Frontier Province, Samburu District and the East Suk Area of Baringo District. These figures are District Commissioner's estimates.

†It should be noted that the areas of Provinces and Districts are quoted as at the time of the 1948 Census. Since then, several revisions have been made, see Table I for latest data. The difference in the total area of 223,478 sq. miles and that of 224,960 sq. miles quoted in Table I is mainly accounted for by the exclusion of that part of Lake Victoria which lies in Kenya.

MIGRATION

Notes and Definitions

Migration statistics are collected under an Immigration Ordinance. Every person entering the territory is obliged by law to complete a form except, since August, 1948, visitors to East Africa passing through the E.A. High Commission Territories and between these territories and Zanzibar. These visitors are required to complete a form only on their first entry into one of the E.A. High Commission Territories or Zanzibar. There are immigration officers at seaports and main airports, and persons crossing land frontiers are required to report to the nearest Immigration Office. Statistics of migration by sea and air are relatively accurate but those of land migration are liable to considerable error.

The categories for migrants used in the compilation of migration statistics are not legally defined. In general the attempt has been made in practice to define visitors so as to satisfy the requirements of the International Tourist Travel Association and "permanent" migrants for the purposes of population studies. Since entry permits and passes are issued with a different purpose, there are cases where it is slightly doubtful into which category a migrant should be placed. The number of such cases is relatively very small.

Indigenous Africans are not obliged to fill in migration forms, so the short distance movement of natives to and from neighbouring territories is not covered by the statistics. Thus the number of Africans covered is very small, and refers largely to sea and air travellers from further afield.

Owing to the introduction of new migration schedules, it was difficult to provide statistics of visitors and total migrants for Kenya for 1950 onwards in a form strictly comparable with those for previous years. The relatively small numbers of visitors to East Africa who entered Kenya from one of the other East Africa High Commission Territories or Zanzibar are included in the statistics for the years before 1949, but not subsequently. Residents of Kenya, Tanganyika and Uganda visiting within these East African Territories are excluded from the tables, beginning with the year 1958.

OLD RESIDENTS :

Persons returning to the territory are classified as old residents if—

- (a) they have a Certificate of Permanent Residence; or
- (b) they have a valid Re.entry Pass; or
- (c) if they have been resident in the territory (other than as a visitor or person in transit as defined below) and have been absent for a period of less than one year.

NEW PERMANENT IMMIGRANTS:

Persons entering the territory are classified as new permanent immigrants if they are not old residents as defined above and—

- (a) they have an Entry Permit. (This allows them to become residents of the territory); or
- (b) they have a Dependant's Pass; or
- (c) they have a Temporary Employment Pass; or
- (d) they have a Pupil's Pass; or
- (e) they enter the territory as visitors and later obtain permits to become residents.

PERSONS IN TRANSIT :

Persons entering or leaving the territory are so classified if they have an In Transit Pass. These passes are issued when persons are passing through the territory to a destination outside it and are valid for a period of up to two weeks (one month prior to July, 1957). They are not required by persons who do not stay overnight in the territory, or crews of aircraft and ships. Such persons are not recorded in the migration statistics.

VISITORS:

Persons classified thus are those who have.

- (a) a Visitor's Pass; or
- (b) a Special Pass.

Visitors' Passes are valid for up to six months and allow the visitor to pursue temporarily his business or profession; they also cover holiday visits. Special Passes are valid for up to two months and cover a number of short emergency visits as well as cases where further investigation has to be made before another pass is issued. Certain people who enter as visitors later obtain permits which allow them to become residents; they are then required to fill in a further immigration schedule and statistics of such changes have been produced for Kenya at the end of each year since 1949.

PERMANENT EMIGRANTS ;

Permanent Emigrants are persons who have resided in the territory concerned (other than as visitors or persons in transit) and who on departure state that they are leaving permanently.

TEMPORARY EMIGRANTS:

Temporary Emigrants are residents of Kenya who, on departure, state that they will be returning. In fact, a proportion of temporary emigrants fail to return, but for technical reasons it is not possible to reclassify them as permanent emigrants.

EXTERNAL AND INTERTERRITORIAL TRADE

Historical Note

in the valuation of East African trade it must always be remembered that valuation is at the point of entry or exit. When looking at East Africa as a whole, this makes no difference, but when studying the trading position of each territory, it results in Uganda's exports being over-valued and her imports under-valued; the same applies to a considerable volume of trade conducted by the northern provinces of Tanganyika, which almost exclusively make use of the port of Mombasa. The result is an inflation of the balance of trade, the figures in Annual Trade Reports for many years being biased in Uganda's and Tanganyika's favour. An accurate statistical picture, were such an exercise worth doing, would show a different story. It should also be noted that into Kenya's statistics of external trade are added many of the imports used on an East African basis, whether by public utilities, headquarters of industrial and commercial concerns, hotels, or other organizations.

Prior to 1949, when the Customs of Kenya, Uganda and Tanganyika were unified. Annual Trade Reports were prepared for Kenya and Uganda as a single unit and Tanganyika as a separate unit. Trading between the two separate units was treated on the basis of foreign trade.

From 1949, all trade was valued at the point of entry into or exit from East Africa and credited to the territory to or from which the goods were consigned.

From 1950 to 1955, imports have been recorded on a "NET IMPORTS" basis, which allows for adjustments of transfers of imported goods from one East African territory to another, so that the final territory of destination is shown as the importing territory. Furthermore, the transfer of local produce and manufactures between the three territories has been excluded from the external trade statistics from that year.

In order to speed up the production and allow for the expansion of the East African Monthly Trade and Revenue Reports, from 1956, imports have been recorded on a "DIRECT IMPORTS" basis (see definition 2 below). It is not possible, therefore, to compare 1956 and later countrywise data with earlier years for territorial imports, but "NET IMPORTS" totals by individual articles have been made available in order to allow for comparison back to 1950.

Notes and Definitions

1. **Net Imports.**—Imports received direct from countries outside East Africa, *plus* imported goods transferred from Uganda/Tanganyika, *minus* imported goods transferred to Uganda/Tanganyika. This basis produces negative quantities and values in certain instances (*see* note 18 below).

2. **Direct Imports.**—Goods entered at the time of importation for consumption or *warehousing* in the East African territories, including, in both cases, goods which are subsequently re-exported. Goods warehoused at the Port of Mombasa on behalf of Uganda and the Northern Province of Tanganyika are recorded as "DIRECT IMPORTS" of Kenya.

3. **Re-exports.**—Imported goods subsequently re-exported without change of form to countries outside the East African territories or re-exported as aircraft and ships' stores.

4. **Domestic Exports.**—Kenya produce and manufactures exported to countries outside the East African territories or as aircraft and ships' stores.

5. **Retained Imports.**—Net imports, minus re-exports.

6. **Transfers.**—Goods originating from outside the East African territories which are consigned from one East African territory to another. These transactions are *not* included in re-exports, but, as stated in the historical note above, result in the presentation of imports on a "NET IMPORTS" basis.

7. **Interterritorial Trade.**—Relates only to the exchange of local produce and locally manufactured goods between the three East African territories.

The figures published are not comprehensive because there is no strict control over the movement of goods between territories and certain articles transferred are not recorded by the customs.

The value of interterritorial transfers in 1959 *excludes* excise duty on excisable commodities (i.e. sugar, beer, tobacco, cigarettes and matches), and as far as possible customs duty charged on imported raw materials used for locally manufactured goods. In statistics for the previous years the above duties were included in the valuation.

The value shown in statistics for the year 1959 is therefore *not* comparable with that for the previous years.

8. **Values.**—

(a) *Imports:* Imports are valued at the point of entry into Kenya. The value includes cost, insurance, freight and any commission except buying commission up to five per cent and *excludes* Customs duty and any landing charges payable within Kenya.

(b) *Re-exports and Domestic Exports:* Valued free on board ship or aircraft. The amount of any Kenya levy, cess or export tax to which goods are liable is *included* in the value.

9. **Specie and Currency Notes.**—Included at their intrinsic value as base metals and paper respectively.

10. **Gold.**—Import and export values of gold are *included* in the external trade statistics.

11. **Country of Origin.**—The country in which the goods were grown or produced; in the case of manufactured goods, the country in which the manufacturing process was substantially completed. When the country of origin cannot be determined, the goods are shown as originating in the country from which they were consigned.

12. **Country of Destination.**—The country of final destination as far as can be ascertained at the time of export. If, however, the country of final destination is unknown, the country of consignment is shown.

13. **British Countries.**—All the countries of the Commonwealth including Protectorates, Mandated Territories and Condominiums.

14. **Sterling Countries.**—All British countries and Burma, Eire, Iceland, Libya, and Jordan, but *excluding* Canada and Newfoundland. Iraq left the sterling block on 24th June, 1959.

15. **Government Imports and Exports.**—Imports and exports made direct by Kenya Government Departments, East Africa High Commission Departments (including the Railways and Harbours and Posts and Telecommunications Administrations), the Colonial Development Corporation and Foreign Consular Services, when shown as destined for or originating from Kenya are *included* in all the tables in this publication. Details are separately recorded under each article of imports in the Annual Trade Reports. Naval, Military and N.A.A.F.I. (E.F.I.) imported stores (except goods imported by N.A.A.F.I. (E.F.I.) on which duty is collected) **are excluded**.

16. **Aircraft and Ships' Stores.**—Shown as a separate item in domestic exports and re-exports. Details are recorded under each commodity of exports in the Annual Trade Reports.

17. **Parcel Post Imports.**—Prior to 1st August, 1952, goods imported by parcel post and valued at over £50 were shown under the respective articles of imports; those valued at under £50 were allocated to a special parcel post category. Since 1st August, 1952, *all* imports by parcel post have fallen under the special category as they are not analysed by article. The quantity and value of specific articles of imports is therefore understated to the extent of trading by means of parcel post; this must particularly apply to cotton and silk piece goods. The value of overseas parcel post entries into Kenya for the years 1950-1959 was as under:—

1950: £0.4 million, representing 1.1 % of total net imports.

1951: £0.6 million, „ 1.2%

1952: £2.4 million, „ 4.1%

1953: £4.0 million, „ 7.8%

1954: £5.4 million, „ 8.9%

1955: £6.6 million, „ 9.2%

1956: £5.5 million, „ 7.9%

1957: £4.6 million, „ 6.4%

1958: £4.3 million, „ 7.1%

1959: £3.4 million, „ 5.5%

18. **Negative Quantities and Values—Net Imports.**—Are caused by the transfer, from one territory to another, of goods imported in a previous year or at a higher value than when originally imported.

19. **External Trade Indices.**—Notes on the method of compilation of the External Trade Indices are given in an introductory article in the December, 1959, issue of the "Quarterly Economic and Statistical Bulletin," published by the E.A. Statistical Department. Further information will be given on request.

20. **Introduction to East Africa of the "Standard International Trade Classification".**—With effect from 1st January, 1954, the new "Official Import and Export List" of the E.A. Customs and Excise Department, which is based on the "Standard International Trade Classification" approved by the United Nations and amended slightly to cater for specific East African needs, took the place of the local trade classifications previously in use. Comparisons in respect of certain individual articles for the years 1954/1955 and earlier years are therefore not always possible. Assistance in overcoming any difficulties experienced can be obtained from the E.A. Statistical Department.

21. More detailed definitions and notes relative to East African trade are to be found in the Annual Trade Reports of Kenya, Uganda and Tanganyika, published by the East African Customs and Excise Department.

See Note 5.

*Includes: certain materials for the production of food and also unmanufactured tobacco.

Includes: feeding stuffs for animals; oilseeds and nuts; processed oils and fats; all aviation and motor spirit; all fuel oils, lubricating oils and greases.

Excludes: private motor-cars, motor-cycles, cycles and domestic appliances, furniture and fixtures; all of which are included under "Consumers' goods".

Includes: private motor-cars, motor-cycles, cycles and tyres and tubes for same; domestic appliances including refrigerators, sewing machines, wireless sets and radiograms, wood and metal furniture and fixtures and other household utensils; all cotton and other piece goods; blankets; all articles of clothing and footwear.

+Includes: all imports by parcel post (which are not analysed by articles); livestock not for food; gold and silver.

Producers' Capital Goods—

1(a) Industry.

Includes: railway rolling stock: rails, sleepers, track construction accessories and signalling apparatus; industrial and mining machinery of all types; hand and portable appliances, tools and implements; machine tools; engines of all types; apparatus for wireless, telegraph and telephone; insulated cables and wire for electricity; wire cables, ropes, fencing, etc.

2(b) Commerce:

Includes: buses, trucks, lorries, trailers and other road motor vehicles (complete) (except private); aircraft; accounting, book-keeping, calculating and other office machines (complete), including typewriters; safes and strong room fittings.

3(c) Agriculture:

Includes: agricultural tractors, machinery and appliances, hand tools and implements; milking machines, cream separators and other farm dairy equipment; barbed wire.

(d) Other:

Includes: prefabricated buildings and their assembled parts; sanitary, plumbing, heating and lighting fixtures and fittings; scientific, medical, optical, measuring and controlling instruments and apparatus.

NOTE.—In this table the value of interterritorial trade for the year 1958 has been recalculated to be comparable with that in 1959. See Note 7

TRANSPORT AND COMMUNICATIONS

Notes and Definitions

1. East African Railways and Harbours.—

General statistics relating to Kenya, Uganda and Tanganyika on a territorial basis are available up to 1950 only, for, as from 1st January, 1951, the Administration has operated the system on an East African basis.

Statistics relating to the Capital Expenditure of the Railways and Harbours in East Africa are derived from the annual report of this organization. For accounting purposes, capital expenditure is defined as including purchases of land, expenses of loan issue and interest paid out of capital. This definition of Capital Expenditure differs slightly from the economist's definition used elsewhere in this Abstract e.g. in the tables of gross capital formation included in the Domestic Income Section.

2. Shipping.—

- (a) Details of entry only have been given in this publication.
- (b) Statistics relate to both steam and sailing ships engaged in international or coastwise trade, arriving either with cargo or in ballast. A tug with lighters in tow is counted as a single steamship with a tonnage equal to the combined tonnage of the tug plus the lighters. Naval craft are *not* included.
- (c) Returns are received from the following Kenya ports, each call at a port being counted separately:—
MOMBASA: MALINDI: LAMU: KIPINI: KILIFI: FUNZI and SHIMONI.

3. Air Traffic.—

- () From 1952 to 1957 scheduled aircraft services were operated from Nairobi (Eastleigh) and from Nairobi West (renamed Wilson Aerodrome in 1958). Nairobi Airport was opened on 8th March, 1958, and from that date Nairobi (Eastleigh) was closed to commercial aircraft, being used by the Royal Air Force only. By 6th July, 1958, all scheduled services had been transferred from Wilson Aerodrome to the new Nairobi Airport and Wilson Aerodrome is now used for non-scheduled commercial services only. From 1952 to 1957 the statistics for Nairobi therefore relate to two aerodromes. During the change-over period of 1958 statistics have been derived from the three aerodromes for varying parts of the year. From 1959 onwards it can be expected that statistics will refer only to Nairobi Airport.
- (b) R.A.F., Military, Police, training, testing and private aircraft movements are *not* recorded.
- (c) Total number of passengers handled is the number embarking and disembarking, including transit passengers twice.
- (d) Passengers in transit are those continuing their journey in the same aircraft.
- (e) Passengers landing or embarking are mainly those completing or commencing their journey, but the statistics do include a small number changing aircraft or staying over for a few days.
- (f) Freight handled is the weight of freight and mail unloaded from or loaded into aircraft. It does not include aircraft fuel or stores or goods remaining in the aircraft.
- (g) *Movements:* Each touch-down and take-off is counted as a separate movement.
- (h) Table 66 is not comparable with table 65.
- (i) Table 66 *excludes* passengers and freight in transit and internal air traffic within East African Territories, and to Zanzibar.
- (k) For the purpose of direction of air traffic, countries of origin and destination have been grouped into regions, in order to avoid disclosing the operations of individual companies. The countries included in each region are as follows:—
 - (1) *United Kingdom*—includes Eire.
 - (2) *Continental Europe*—Belgium, Bulgaria, Czechoslovakia, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Luxemburg, Netherlands, Norway, Poland, Portugal, Rumania, Spain, Sweden, Switzerland, U.S.S.R., Yugoslavia.
 - (3) *Middle East*—Cyprus, Egypt, Iran, Iraq, Israel, Lebanon, Syria, Turkey.
 - (4) *Arabian Peninsula, Pakistan and India*—Aden, Bahrein, Ceylon, India, Kuwait, Oman, Pakistan, Saudi Arabia, Yemen.
 - (5) *Africa North of the Equator (excluding Egypt)*—Algeria, Eritrea, Ethiopia, French Equatorial Africa, Libya, Morocco, Somaliland, Sudan, Tunis, West Africa.
 - (6) *Africa South of the Equator and adjoining Islands*—Angola, Belgian Congo, Federation of Rhodesia and Nyasaland, Madagascar, Mauritius, Mozambique, Reunion, Union of South Africa.
- (/) 1 Kilogram (Kg.)=2.205 lb.; 1,000 Kilograms=2,205 lb.=1 Metric Ton.

4. Roads.—

No early data has been quoted because owing to the lack of information recorded comparisons of current data with earlier published figures would only be misleading.

5. Motor and Other Road Vehicles.—

- (a) The "Kenya Survey of Motor Vehicles" is published quarterly and annually by the Registrar of Motor Vehicles. This publication contains a detailed analysis of all motor and other self-propelled vehicles by type, make, horse power, cubic capacity, carrying capacity and method of propulsion. It also includes a list of trailers.
- (b) All Government owned vehicles are *included*, but military owned vehicles are *excluded* from the statistics.

6. Posts and Telecommunications.—

Since the introduction in 1949 of a unified East African service, only certain statistical series relative to the separate territories have been retained and, as far as possible, details relative to Kenya only have been shown in this publication. Other data have had to be shown on an East African basis.

AGRICULTURE

Notes and Definitions

Data on non-African agriculture are relatively accurate and comprehensive. For the main crops, statistics of production are available, compiled from statutory returns completed by farmers or from deliveries to the various controlling Boards. Prices for certain cereals are guaranteed by Government and for others there is an average payout to producers based on the total receipts of the relevant Board or Control.

The tables relating to non-African farms are derived from the annual agricultural census. A statistical report on this census is published each year. For 1958 a very detailed "Economic Analysis" of the census has been published, giving a full account of methods and coverage. During the period 1954-1959 the coverage of the census has been improved. For certain of the major statistics adjustments have been made for limited coverage in the earlier years. The adjusted time series are given in the "Economic Analysis". The tables relating to non-African farms in this Abstract are unadjusted for coverage, and this factor should be remembered in using the statistics. Footnotes to the tables indicate the stage at which the statistics were extended to include the Voi district and the Coastal areas, and in addition there has been an improvement in coverage in other areas.

FORESTRY

Notes and Definitions

The table on production covers timber and other forest produce from forests controlled by the Forest Department. Timber cut on private farms and estates is excluded, as also is a very small amount of timber issued free by the Forest Department. The amounts excluded in this way form only a small proportion of total production. The factor 1.273 is used for converting production in hoppus cubic feet to round timber true volume.

The table on total forest areas includes forest areas on non-African farms and estates. It will be noted that private forests form only a small part of the whole.

The table on the area of plantations refers to the total area at the end of the year. This takes account of planting and felling during the year.

 *Where statistics are for periods other than a year, they have been converted to an annual basis for purposes of comparison.

AREAS OF AGRICULTURE AND INDUSTRY

MINING

Notes and Definitions

Kenya statistics of mineral production are compiled from returns made by mining concerns. For salt and lime commercial output only is covered, but considerable quantities of these items which are mined and used on farms, etc., are not recorded. The values given for gold, lime, mullite and diatomite are the gross amounts realized by the producers. The production of limestone and gypsum excludes that used as material in the production of local cement.

*Including kyanite.

FUEL AND POWER

Notes and Definitions

Electricity.—For the period prior to the second quarter of 1948, sales of the East African Power and Lighting Company are given, but as from that quarter a small amount of electricity has been sold by the Kenya Government in the Nyeri area. However, the East African Power and Lighting Company acquired the Nyeri Electricity Undertaking with effect from 1st January, 1960. Although the Kenya Power Company has generated electricity since October, 1955, and imported power from Uganda since January, 1958, this Company's entire production (including imports) is purchased by the East African Power and Lighting Company for subsequent resale to the public. Electric power has been exported by land line from Tanganyika to Kenya since 1949, and included in the sales at Mombasa. At present, imports of electricity from Uganda are sold in the Nairobi, Rift Valley and Nyanza areas.

Lubricants—Aviation lubricants include oils and greases, in thousand gallons. Railway oils are those sold on contract, e.g. action, motion and steam cylinder oils.

COMMERCE AND INDUSTRY

Notes and Definitions

Company Statistics

Statistics of local companies registered include businesses already in existence which are converted into companies of limited liability, while the details of new nominal capital created in a year include capital increases by existing limited liability companies through rights, bonus issues, etc.

Statistics of foreign companies provide details of those companies which are registered outside Kenya but which maintain a place of business in Kenya. The nominal capital of foreign companies is not shown since the total registered capital of these companies gives no indication of the amount of capital they have invested in Kenya.

Bankruptcy statistics do not include companies winding up under the Official Receiver.

Industrial Production

Statistics for the 1957 survey of industrial production relate only to establishments giving employment to five or more persons. The response of firms to the questionnaire sent to them was less than 100 per cent, but estimates of the costs and output of these non-responding firms are included in the statistics given.

The term "net output" means the value added to the gross domestic product by industry and is obtained by subtracting from the value of gross production all current non-labour costs other than depreciation.

(1) For the purpose of this table, all branch establishments in Kenya have been amalgamated with the head office, and the total number of employees (of all races) obtained in this way is the basis for classification by size.

(2) Only firms reporting employees are included in the table. Self-employed persons are excluded.

BUILDING

Notes and Definitions

Statistics of private building are compiled from the following sources:

- (a) Returns of private buildings and extensions completed in six main towns.
- (b) Details of building in non-African agriculture collected as part of the annual agricultural census.
- (c) An estimate of building in minor towns and other areas.
- (d) An estimate for non-response in the six main towns.

The term "extensions" includes all major alterations and additions to buildings.

Buildings which are partly residential and partly non-residential have been allocated according to their main purpose. It should be noted that floor area can be allocated more accurately than cost.

A block of flats is counted as a single building.

Floor area is defined as plinth area together with the floor area of any external ancillaries such as garages, servants' quarters, store rooms, lavatories, etc.

Statistics of building in the public sector are obtained by reference to the accounts of the Central Government and of the High Commission services and from returns submitted by local authorities. Buildings erected by the E. A. Land Forces and, by H. M. Government for military purposes are not included.

CURRENCY AND BANKING

Notes and Definitions.

Currency.—East African currency circulates in Kenya, Tanganyika, Uganda, Zanzibar, British Somaliland and the Aden Protectorate. The standard coin is one Shilling E.A. = 100 cents. This is exchanged in London at the rate of 20/- E.A. for £1 sterling subject to a maximum premium of 1/2 per cent on transfers. Currency notes are used for denominations of 5/- and over, silver or cupro-nickel for 1/- and 50-cent pieces and copper for lower denominations. The currency is supervised by the East African Currency Board, whose headquarters were in London until August, 1960, when they were transferred to Nairobi. The shilling currency was introduced in Kenya, Tanganyika and Uganda in 1922, in Zanzibar in 1935, in Somalia, Eritrea, British Somaliland and Ethiopia at various dates subsequent to August, 1941 and was withdrawn from Ethiopia, Eritrea and Somalia during 1949 and 1950. In October, 1951 it was made legal tender in the Aden Protectorate.

Commercial Banking.—The different categories of deposits are defined as follows:

- Demand: subject to transfer or cashing by cheque.
- Time: usually not subject to transfer by cheque and lodged for a definite period subject to notice of withdrawal.
- Saving: lodged for no fixed period of time and not subject to transfer by cheque.

The Kenya Land Bank which was established in 1931 derives its funds from the Exchequer and government-guaranteed bank overdrafts and from deposits by the public. Its main function is to provide financial assistance against security to farmers on long term for purchasing land, discharging existing mortgages, making permanent improvements, buying livestock, seed or agricultural equipment, or on short term for meeting the cost of farming operations or minor improvements. Long term loans may be up to a maximum of £5,000 or up to 60 per cent of the value of the land and are repayable in not more than 30 years.

Under the heading "Loans Reverted to Land Bank on Foreclosure" (Table 118) positive amounts represent farm properties taken over by the Land Bank, and negative amounts arise from the sale under agreement of these properties. A farm property taken over diminishes the balance of loans outstanding, and a farm property sold under agreement increases it.

KENYA GOVERNMENT ANALYSIS OF TOTAL EXPENDITURE

PUBLIC FINANCE

Notes and Definitions

The form in which Government accounts are kept and published is determined by the administrative structure and by the requirements of financial control. In Tables 123 and 124 of the following section the accounts have been rearranged so that the service or section of the economy upon which money is spent and the way in which Government obtains its money can be seen more clearly. In carrying out this reclassification the recommendations of the United Nations for the analysis of Government accounts have been followed.

Table 122 (a) is a summary of the Appropriation Accounts. Table 122 (b) summarizes the results of the reclassification of revenue and expenditure and Table 122 (c) shows how the deficit or surplus is financed or utilized. The difference between the totals as shown in the Appropriation Accounts and in the reclassification arises from two causes:—

- (i) the reclassification includes Appropriations-in-Aid in both revenue and expenditure. Appropriations-in-Aid is revenue earned by Departments and Ministries by the provision of goods and services and appropriated to meet their own expenditure;
- (ii) it eliminates double-counting arising from inter-account and inter-departmental transfers.

As both these types of adjustment affect revenue and expenditure to an equal degree the deficits or surpluses shown in Tables 122 (a) and (b) are identical.

At the beginning of the Emergency a fund was set up in order that urgent expenditure in connexion with the Emergency could be made speedily and, at the same time, be controlled from the Treasury. Some money from this fund was reallocated to Ministries who disbursed it as part of normal departmental expenditure. In Table 124 this element of Emergency expenditure has been shown separately in italics and is excluded from the departmental and grand totals in order to avoid double-counting with the Emergency contribution, which is shown as the last item of expenditure.

The following figures for 1958/59 reconcile total revenue and expenditure as shown by the reclassification with the accounting figures in the Appropriation Accounts. From them it is possible to see, firstly, revenue and expenditure (reclassified) net of Appropriations-in-Aid and, secondly, the amount of double-counting arising from inter-account, Emergency Fund and inter-departmental transfers:

	Colony Account £'000		Development Account £'000	
Revenue		38,268		
As shown in Table 123		7,150		6,147
Less Appropriations-in-Aid				109
Net Revenue		31,118		6,038
Plus transfers from Development Account	971		-	
transfers from Account			439	
transfers from Emergency Fund	910		317	
inter-departmental transfers	469			
		2,350		756
Total as shown in Appropriation Accounts	6,794	33,468		32,997
Expenditure				
As shown in Table 124		38,092		8,016
Less Appropriations-in-Aid		7,150		109
Net Expenditure		30,942		7,907
Plus transfers to Development Account	439			
transfers to Colony Account			971	
departmental Emergency expenditure	910		317	
inter-departmental transfers	469			
		1,818		1,288
Total as shown in Appropriation Accounts		32,760		9,194

DOMESTIC INCOME AND PRODUCT

Notes and Definitions

Domestic Income and Product

Since publication of the 1959 Abstract the basis of calculation of the domestic product has been changed. The new series, which starts from 1954, measures gross domestic product, whereas the former series measured net domestic product, i.e., net of depreciation. In addition, the methods of estimating many of the individual series have been revised and improved. For a full description of the estimates, sources of information and estimates of error, see the report "Domestic Income and Product in Kenya, 1954-1958".

Capital Formation

The private sector comprises incorporated and unincorporated enterprises, non-profit organizations and households. Figures for expenditure on building and construction have been derived from returns made by the owners of new buildings erected in the six main towns, an estimated addition for expenditure in other areas, and the annual non-African agricultural census for expenditure on farms. The figures for expenditure on transport equipment and plant and machinery have been based on import statistics. Expenditure on transport equipment includes passenger cars but the value of this expenditure is also shown separately.

"Public trading enterprises" comprises the E.A. Railways and Harbours and Posts and Telecommunications Administrations. Expenditure figures are obtained from their Reports and Accounts and represent the estimated Kenya share of total capital expenditure.

"General government" comprises Kenya Government departments (including the Road Authority), the Kenya share of High Commission services and local authorities. For branches of government operating on a July-June financial year, calendar year figures are averages of expenditure in two financial years. Capital formation resulting from Emergency and military expenditure other than housing has been excluded.

The figures attempt to measure expenditure on fixed assets which represent a gross addition to the stock of capital of the economy. Thus purchases of land and most purchases of secondhand assets are excluded since expenditure on these represents transfers of assets from one sector to another rather than additions to total capital.

. E.A. Railways and Harbours and Posts and Telegraphs (Kenya share). "General government" comprises central and local government and ancillary agencies.

CROSS DOMESTIC INCOME AND PRODUCT

NAIROBI

COST OF LIVING INDEX (Excluding Rent)
(Base—1939 = 100)

RETAIL PRICES AND COST OF LIVING

Notes and Definitions

The Nairobi cost of living index (excluding rent) measures, with a base August, 1939, the cost of maintaining a standard of living prevailing among European Government servants with a basic salary of less than £500 per annum in 1947. The weights used were based on a family budget survey carried out at that time.

The weights used for this index are as follows:

Group	Weight	Group	Weight
(1) Food, Drink and Tobacco	43	(5) Papers and Periodicals	1
(2) Household	11	(6) Wages	13
(3) Pharmaceutical Products	3	(7) Transport	11
(4) Clothing and Footwear	10	(8) Amusements	3
		(9) Miscellaneous	5

The weights adopted in the food, drink and tobacco group are set out below. The items in the food, drink and tobacco group number 42.

Item	Weight	Item	Weight
(1) Groceries	24	(5) Fruits	7
(2) Meat and Fish	18	(6) Vegetables	6
(3) Dairy Produce	14	(7) Beverages and Tobacco	25
(4) Bakery	6		

Wage Earners' Index

The wage earners' index of consumer prices which appears for the first time in this issue of the Statistical Abstract measures the effect of price changes on the average expenditure pattern of lower paid workers in Nairobi, that is those earning less than approximately Sh. 350 per month. For further details see "Wage Earners' Index of Consumer Prices in Nairobi" published by the East African Statistical Department, 1960.

The weights used in this index are as follows:—

Group	Weight	Group	Weight
(1) Food	671	(6) Personal Care and Health	19
(2) Beverages and Tobacco	79	(7) Recreation and Entertainment	11
(3) Fuel and Light	52	(8) Transport	26
(4) Clothing and Footwear	79	(9) Miscellaneous	10
(5) Household Operation	53		

The main food items with their weights are set out below:—

Item	Weight	Item	Weight
(1) Maize Meal	120	(5) Bread (white)	45
(2) Beef	143	(6) Kimbo	31
(3) Milk	81	(7) Wheat Flour	29
(4) Sugar	51	(8) Beans	29

Wage Adjustment Index

The wage adjustment index is a recalculation of cost of living index excluding all increases in duties on alcohol and tobacco since August, 1939. As the alcoholic beverages and tobacco group has a weight of ten in the cost of living index the removal of increases due to duty changes has a considerable effect on the movement of this index.

EMPLOYMENT AND EARNINGS

Notes and Definitions

All the tables in this section, except Tables 147, 148 and 149 are derived from the Annual Enumeration of Employees carried out by the East African Statistical Department in co-operation with the Labour Department, Kenya. This enumeration took place at the end of November each year up to and including 1955, and at the end of June in 1956 and all subsequent years.

Public Services include Kenya Government, High Commission (Kenya only), E.A. Railways and Harbours (Kenya only), E.A. Posts and Telecommunications (Kenya only), Defence (civilians only), Local Governments and African District Councils and the locally recruited staffs of representatives of foreign governments.

Private employers engaged in several activities were asked to state their main activity, and this was the basis of industrial classification. Agricultural and domestic employees are included under the general heading of Private Employment, unless shown separately.

In Private Employment, *Other Services* includes domestic service, education, medical and health, religious, legal and business, community and personal services.

Over time the coverage has improved, particularly in 1954 and 1955, and therefore the figures are not always strictly comparable.

Employment figures include all apprentices and part-time workers, but exclude directors and partners without basic salary.

Earnings or *Wages* cover all cash payments, including basic salary, cost of living allowances, profit bonus, together with the value of rations and free board, and an estimate of the employer's contribution towards housing. Non-cash benefits such as retirement benefits and passage assistance are excluded.

The *Annual Wage Bill* is an estimate from monthly data. The reported earnings for the month are multiplied by twelve.

PUBLIC HEALTH

Notes and Definitions

The statistical table giving the number of doctors and dentists in Kenya (Table 150; must be read with caution. Because there is a single fee for registration, and no annual licence, the register may include a number of doctors who do not practise or who have left the country. Thus in 1953, the number of doctors in Kenya appears to have fallen from 700 to 480, and dentists from 60 to 30. This was due entirely to the removal from the register of a number of names.

The statistics of diseases and deaths reported in Government hospitals must also be read with caution. The bare statistics imply that relatively little progress is being made. In fact, the increased availability of services is maintaining the figures and obscuring the real progress which is taking place. Apart from increased services, the population is increasing and transport facilities have improved. Since 1946 the number of mortalities per 1,000 in-patients has apparently increased. The reason appears to be that improved transport now permits an increasing number of very serious cases to enter the hospitals, which previously would never have reached a hospital.

BALANCE OF PAYMENTS

Note

Estimates of the balance of payments are made only for the three East African territories as a whole. It is not possible to make estimates for Kenya, Uganda and Tanganyika separately because of the importance of organizations operating throughout East Africa and the consequent difficulties of obtaining figures for each Territory separately.
