ABSTRACT
The WORLD Policy Analysis Center (WORLD) is committed to improving the quantity and quality of globally comparative data available to policymakers, citizens, civil society, and researchers on laws and policies that work to support human rights, including economic opportunity, social and civic engagement, human health, development, well-being, and equity. The WORLD Constitutions 2024 dataset was created to assess progress on constitutional rights that matter to equal opportunities through a systematic review of national constitutions across all 193 UN countries as of June 2024. The dataset covers equality and non-discrimination across race and/or ethnicity, gender and sex, migrants and refugees, religion and belief, disability status, socioeconomic status, sexual orientation, and gender identity, as well as the right to education, health, decent working conditions and non-discrimination in employment, and social protection.

VERSION DESCRIPTION
v1: Edited anonymised data for distribution as public access share-alike data

VERSION DATE
2024

Scope

NOTES
Constitutional equality and non-discrimination across race and/or ethnicity, gender and sex, migrants and refugees, religion and belief, disability status, socioeconomic status, sexual orientation, and gender identity, as well as the right to education, health, decent working conditions and non-discrimination in employment, and social protection.

Coverage

GEOGRAPHIC UNIT
The data is at the level of country and includes all 193 UN member states

DATA COLLECTION NOTES

WORLD examined constitutional and legal provisions as they set a foundation for rights and are a first step toward improving outcomes. Across countries, having laws on paper does make a difference in practice. Laws and constitutional rights lead to change by shaping public attitudes, encouraging government follow-through with inspections and implementation, and enabling court action for enforcement. Even when local enforcement is inadequate, laws may still have an impact by shaping the terms of political debate and providing levers for civil society advocates. Laws are a mechanism by which power can be democratically redistributed, changes in institutions can be created to ensure greater fairness, and a social floor guaranteeing minimum humane conditions can be established.

DATA SOURCES

In selecting data sources to analyze, our first priority is to identify sources containing full-text original legislation. To ensure the greatest level of accuracy and comparability across countries, we always aim to read the original laws (primary sources) rather than secondary summaries or policy descriptions. Primary sources allow for more accurate coding across countries, particularly in complex legal areas. Working with primary sources also allows us to provide excerpts or links to actual legislation and constitutions for those interested in passing new laws or creating reform in their countries. We review documents in their original language or in a translation into one of the UN's official languages.

Secondary sources are used when information is unclear or insufficient for particular countries. In choosing these secondary sources, we prioritize those that are comparable across multiple countries, such as global or regional sources. When using information sources that cover a limited number of countries, we aim to ensure that the information they contain can be made consistent with other sources.

This dataset relies exclusively on primary constitutional texts in force as of June 2024, in a constitution's original language whenever possible or translated into an official UN language when this was not possible. Additional legislation was included in the database only when the constitution explicitly referenced it. Although the vast majority of countries have codified written constitutions, a few countries (e.g., the United Kingdom, Canada, New Zealand and Israel) either have no written codified constitution or have a series of constitutional laws rather than a single text. In these cases, those documents or laws that are considered to be constitutional either by the country itself or by the legal community are used. Our current dataset is a reflection of what is explicitly written in constitutions. Litigation can play an important role in creating a body of jurisprudence that can further extend constitutional protections beyond what is contained in the constitutional text itself. Given that the scope of the project includes 193 UN countries, and that the role and strength of case law varies substantially

across countries, we are unable to include an analysis of case law relevant to the rights reported. Including case law in future analyses will be important to understanding more fully the extent to which equal rights are protected in different countries.

CODING FRAMEWORKS

In this work, coding refers to the process of translating legislative, policy, or constitutional text into a set of features which can be quantitatively analyzed to provide readily understandable summaries of policy approaches across countries and transformed into data visualizations, such as maps or charts. For example, a researcher reviews many pieces of labor and social security legislation and uses them to answer questions such as: Does a country guarantee paid parental leave? Is it available to all parents, only mothers, or only fathers? How long is paid leave? What is the wage replacement rate? How long do workers need to have been employed to access paid leave?

To answer these questions consistently across countries, we first identify the essential policy features that we want to capture, including intrinsic characteristics, such as coverage; important elements identified in policy research; and minimum standards recognized in global agreements, where they exist. Researchers then read legislative text from 20 to 30 countries to develop an understanding of the approaches countries take in each of these areas. A coding framework consisting of questions and close-ended responses is developed to capture the essential policy features systematically across countries based on the range of approaches identified. Research team members then test whether this coding framework accurately captures approaches on an additional ten to twenty nations.

Once we have a viable framework, we seek feedback from civil society and researchers working in these areas to ensure the questions we are asking will provide the critical answers needed to inform policy debates. Their feedback can lead to more scoping and test coding to determine which questions are feasible to answer with available legislation, recognizing that some important areas aren't always covered by national laws and policies. For example, access to sanitation facilities and safe transportation matters deeply to girls' ability to complete their education but is rarely addressed in a meaningful way in national-level education laws and policies. In other cases, new areas of research might involve going beyond the initial legislation we planned to code, expanding the scale of the project.

Capturing the richness and variety of approaches taken by different countries is our priority throughout the coding process. At times, research teams would have already analyzed 60 to 80 countries before coming across a single country whose approach to a particular problem was different enough in important ways that it could not be adequately captured within the coding scheme. In these cases, the coding scheme was revised to add the elements necessary to capture new features of legislation and policymaking that had presented themselves. All previously coded nations were reviewed to determine whether the revised coding system would alter how they were analyzed. In other words, the new coding system, better adapted to the full variety of approaches nations around the world take, was applied to all countries in the end.

The data sources available contained systematic information on legislation and policies but not on implementation. To ensure consistent approaches across countries, reports that contained comprehensive information on policies but only limited incidental information on implementation were coded only for policies. Obtaining systematic sources of information on implementation should be a pressing priority for global organizations.

CODING PROCESS

Core to ensuring transparency and consistency is developing a codebook that details the rules and examples for coding each question. Researchers rely on this codebook to make decisions on coding policy features. The codebook is designed to be as straightforward as possible, but some questions require judgment calls. To minimize human error, we use a double coding system where two researchers independently code legal text for each country and then meet to compare their results. When two researchers cannot reach consensus based on the existing codebook, they bring these questions to the full coding team and senior analysts. This team meets regularly to discuss any questions or concerns that arise through the coding process. We record detailed minutes of these meetings and update the codebook to reflect any determinations that impact the coding rules.

ACCURACY, ANALYSIS, AND UPDATING

Upon completion of coding, we conduct systematic quality checks. We also carry out targeted checks of countries that appear as outliers globally or for their region or income level.

For each of our data sets, we use the most up-to-date sources available. While this approach is designed to achieve accuracy, it is important to note that when publicly available sources have not been fully updated, the most recent amendments may not be captured in our data sets. Further, our process of coding legislation inevitably involves important matters of interpretation. For all data sets, we welcome receiving feedback and copies of laws from anyone who believes the data sets may not be fully up-to-date.
