Overview

ABSTRACT

The Afrobarometer South Africa Survey 2002 was part of Round 2 of the Afrobarometer surveys, and collected data on the attitudes and opinions of the citizens of South Africa. Respondents were asked to rate South African President Mbeki and his administrations' overall performance and to state the most important issue facing the nation. Opinions were gathered on the role of the government in improving the economy, whether corruption existed in local and national government, whether government officials were responsive to problems of the general population, and whether local government officials, the police, the courts, the overall criminal justice system, the South African Defense Force, the media, the Independent Electoral Commission, and the South African Broadcasting Corporation could be trusted. Respondents were polled on their knowledge of government officials, their level of personal involvement in political, governmental, and community affairs, the inclusiveness of the government, and what their reactions would be to executive branch-sponsored government-imposed restrictions or prohibitions on the media, the judicial system, and parliament.

Scope

NOTES

The South African Afrobarometer 2002 covered the following topics:

Political opinions on the role of the government in improving the economy, whether corruption existed in local and national government, whether government officials were responsive to problems of the general

population, and whether local government officials, the police, the courts, the overall criminal justice system, the South African Defense Force, the media, the Independent Electoral Commission, and the South African Broadcasting Corporation could be trusted.

Economic questions on the country's and the respondent's economic condition, whether great income disparities are fair, and whether encouraging people to start small businesses would create more jobs.

Societal questions on trust in others, whether it is wise to plan ahead, whether everyone should be responsible for themselves and their own success or failure, what characteristics respondents used to identify themselves, whether it was easy to obtain assistance with securing food, water, schooling, and medical services, and by what methods respondents secured food, water, news, information, and medical services.

Background variables include age, home language, education, current employment status, employment history, family financial situation over the last 12 months, monetary support system, whether a close friend or relative had died from AIDS,

language used in interview, sex, ethnicity, type of physical disability, if any, type of housing, location of interview and respondent's attitude during interview.

Questionnaires

Overview

There was one questionnaire for the Southern African Barometer Project Democracy Survey I (South Africa) conducted in 2000.

Economic questions addressed the past, present, and future of the country's and the respondent's economic condition, whether great income disparities are fair, and whether encouraging people to start small businesses would create more jobs.

Societal questions addressed how much trust could be placed in others, whether it is wise to plan ahead, whether everyone should be responsible for themselves and their own success or failure, what characteristics respondents used to identify themselves, whether it was easy to obtain assistance with securing food, water, schooling, and medical services, and by what methods respondents secured food, water, news, information, and medical services.

Background variables include age, home language, education, current employment status, employment history, family financial situation over the last 12 months, monetary support system, whether a close friend or relative had died from AIDS, language used in interview, sex, ethnicity, type of physical disability, if any, type of housing, location of interview and respondent's attitude during interview.
