### SURVEY ID NUMBER

zaf-statssa-lfs-2003-sep-v2.1

### TITLE

Labour Force Survey 2003, September

### SUBTITLE

September

### COUNTRY

Name	Country code
South Africa	zaf

### STUDY TYPE

Labor Force Survey [hh/lfs]

### SERIES INFORMATION

Statistics South Africa. Labour Force Survey: September 2003. [dataset]. Version 2.1. Pretoria: Statistics South Africa [producer], 2003. Cape Town: DataFirst [distributor], 2011. DOI: <https://doi.org/10.25828/a3dm-qr39>

### ABSTRACT

The LFS is a twice-yearly rotating panel household survey, specifically designed to measure the dynamics of employment and unemployment in South Africa. It measures a variety of issues related to the labour market, including unemployment rates (official and expanded), according to standard definitions of the International Labour Organisation (ILO).

All editions of the LFS have been updated (some more than once) since their release. These version changes are detailed in a document available from DataFirst (in the "external documents" section titled "LFS 2000-2008 Collated Version Notes on the South African LFS").

### KIND OF DATA

Sample survey data [ssd]

### UNIT OF ANALYSIS

Households (dwellings) and individuals

## Version

---

### VERSION DESCRIPTION

v2.1: Edited, anonymised dataset for public distribution

### VERSION DATE

2011

### VERSION NOTES

The South African September 2003 LFS dataset was originally released in March 2004 as 4 data files (house, migrant, worker and person). A second version was downloaded from the Statistics South Africa website in July 2006 by Datafirst. This version differed slightly from the originally obtained release in a number of ways. Most notably, weights were recast to reflect population estimates released in February 2005. This version was also benchmarked to the 2001 South African census (whereas previously it had been benchmarked to the 1996 South African census). As a result, the weight variable(s) in each data file differ between versions 1.0 and 2.0.

A third version (version 2.1) was downloaded by DataFirst on 11 August 2011, which differed slightly from version 2.0 in the following ways,

- 1) No suffix "\_Sep2003" in some variable names
- 2) Variable labels were altered. Previously, all variable labels were literal questions. Now the variable labels describe the

variables.

3) A number of variables were renamed (beyond dropping the suffix "\_Sep2003"). This could prove confusing when comparing between current and previous versions of the data file.

4) Version 2.0 and 2.1 have some substantive differences:

Household/general data file:

The household/general file in version 2.1 has 10 extra observations, all of which are in Gauteng

Worker data file:

The worker file in version 2.1 has 19 extra observations, all of which come from the abovementioned dwellings in Gauteng

## Scope

### NOTES

Household characteristics, household listing, demographics, education, economic activity, work for pay, business ownership, unemployment, employers, main work activity in the past week, wages, salary, employment, migration

### TOPICS

Topic	Vocabulary	URI
employment [3.1]	CESSDA	<a href="#">Link</a>
in-job training [3.2]	CESSDA	<a href="#">Link</a>
labour relations/conflict [3.3]	CESSDA	<a href="#">Link</a>
retirement [3.4]	CESSDA	<a href="#">Link</a>
unemployment [3.5]	CESSDA	<a href="#">Link</a>
working conditions [3.6]	CESSDA	<a href="#">Link</a>

DEMOGRAPHY AND POPULATION [14]	CESSDA	<a href="#">Link</a>

## Coverage

### GEOGRAPHIC COVERAGE

National Coverage

### GEOGRAPHIC UNIT

Province (variable name: "Prov") - Note that this variable is conspicuously absent from the Household data file, but is present in the Person and Worker data files.

### UNIVERSE

The LFS sample covers the non-institutional population except for workers' hostels. However, persons living in private dwelling units within institutions are also enumerated. For example, within a school compound, one would enumerate the schoolmaster's house and teachers' accommodation because these are private dwellings. Students living in a dormitory on the school compound would, however, be excluded.

## Sampling

### SAMPLING PROCEDURE

The LFS is a twice-yearly rotating panel household survey. A rotating panel sample involves visiting the same dwelling units on a number of occasions (in this instance, five at most), and replacing a proportion of these dwelling units each round. New dwelling units are added to the sample to replace those that are taken out. The pilot round of LFS fieldwork took place in February 2000, based on a probability sample of 10 000 dwelling units. This survey took place six months later, using a larger probability sample of 30,000 dwelling units. Among the 10,000 households visited in February, approximately 40% were re-visited in September 2000. The fieldworkers had some difficulty in identifying certain dwelling units in the sample, particularly in those areas where there are no addresses.

The Master Sample is based on the 1996 Population Census of enumeration areas (EA) and the estimated number of dwelling units from the 1996 Population Census. All 3000 PSUs included in the Master Sample were used in the Labour Force Survey. A PSU is either one EA or several EAs when the number of dwelling units in the base or originally selected EA was found to have less than 100 dwelling units. Each EA had to have approximately 150 dwelling units but it was discovered that many contained less. Thus, in some cases, it has been found necessary to add EAs to the original (census) EA to ensure that the minimum requirement of 100 dwellings, in the first stage of forming the PSUs, was met. The size of the PSUs in the Master Sample varied from 100 to 2445 dwelling units. Special dwellings such as prisons, hospitals, boarding houses, hotels, guest houses (whether catering or self-catering), schools and churches were excluded from the sample.

Explicit stratification of the PSUs was done by province and area type (urban/rural). Within each explicit stratum, the PSUs were implicitly stratified by District Council, Magisterial District and, within the magisterial district, by average household income (for formal urban areas and hostels) or EA. The allocated number of EAs was systematically selected with "probability proportional to size" in each stratum. Once the PSUs included in the sample were known, their boundaries had to be identified on the ground. After boundary identification, the next stage was to list accurately all the dwelling units in the PSUs.

The second stage of the sample selection was to draw from the dwelling units listing whereby a systematic sample of 10 dwelling units was drawn from each PSU. As a result, approximately 30,000 households (units) were interviewed. However, if there was growth of more than 20% in a PSU, then the sample size was increased systematically according to the proportion of growth in the PSU.

### WEIGHTING

The initial weights (household weights), based on the sample design, were equal to the inverse of the probability of selection. The initial weight for each member of the household was the same as the weight for the household itself. Further adjustment factors were then calculated within PSUs to account for non-response. To adjust for under-enumeration and to align survey estimates with independent population estimates, the weights were calibrated against Person benchmarks. A software package called CALMAR was used to perform this calibration. Using an iterative procedure, CALMAR adjusted the weights so that Person estimates conformed as closely as possible to external Person benchmarks. Gender, race and age group parameters were used for the Person cross-classification of the population.

Stats SA revised their population model to produce mid-year population estimates in the light of mortality data released in 2005 (see Stats SA Statistical Release P0309.3, 2005). The benchmarks for the LFS discussed in this statistical release have been adjusted accordingly. Weights were then adjusted according to those 2005 population estimates.

Title LFS 2000-2008 Collated Version Notes on the South African LFS  
 Author(s) DataFirst  
 Date 2011-12-06  
 Country South Africa  
 Language English  
 Contributor(s) Alex Montgomery  
 Publisher(s) DataFirst  
 Description This document summarises all differences between various editions of the LFS (2000-2008 - 16 datasets in total) discovered by DataFirst. The document may not be exhaustive as it is possible that certain differences have between versions been overlooked. Furthermore, DataFirst was only able to compare versions of the data that were available, either online or within the DataFirst archive, as of August 2011.
