Labour force survey (LFS11)                                                                 March  
2005

This document sets out the information that is needed to access labour force survey (LFS11) data.

The files essential for accessing the data are provided in text format. This format was chosen to make the data usable with as many software packages as possible, and thus accessible to a wide range of people. Other files with relevant information are provided in Word 2000 format. If you do not have software appropriate for this format, please contact Stats SA and hard copies will be forwarded to you.

Other important information can be found in the:

Questionnaire
Additional code lists (occupation, industry and district council)
Relevant statistical release
Record layouts
Stats SA’s website: www.statssa.gov.za

The data files

The files and the corresponding sections of the questionnaire are as follows:

Person: Data from flap and Section 1  
Worker: Data from sections 2, 3, 4, 5 and 6  
House: Data from section 7

The information in each file contains the following:

Description of variables

Variables comprise:

Descriptive name: This is a short description of the variable with the variable name in brackets.

Position of the variable: The position of a variable within a record is recorded in the format (@xxx y.). “@xxx” indicates that the variable starts at position (i.e. column) xxx, and “y” indicates the length of the field. All variables are numeric and right justified except for District Councils (DC) which is character and thus left justified.

Final code list: The range of valid values for variables. For continuous variables it only reflects the upper and lower limits.

Not applicable: The code for not applicable is provided for each variable.

Missing value: The code for “missing”/“unspecified” values is given for each variable.
Note to users: Additional information for further clarity on questions.

Merging files
Each record contains a unique number (UqNr), which is a household identifier. The household identifier is the first field in each record. The unique number can be used to merge household records from the HOUSEHOLD, PERSON and WORKER files. For the individuals in a household, a further two digits that constitute the person number (PersonNr) exists which can be used together with the unique household identifier (Uqnr) to merge the PERSON and the WORKER files.

METHODOLOGY

1. Official and expanded unemployment rates
Statistics South Africa (Stats SA) uses the following definition of unemployment as its official definition. The unemployed are those people within the economically active population who: (a) did not work during the seven days prior to the interview, (b) want to work and are available to start work within two weeks of the interview, and (c) have taken active steps to look for work or to start some form of self-employment in the four weeks prior to the interview. The expanded definition of unemployment excludes criterion (c).

The expanded definition therefore includes persons who said they were unemployed but had not taken active steps to find work in the four weeks prior to the interview (i.e. discouraged work-seekers).

2. Sample design
Enumeration Areas (EAs) that had a household count of less than twenty-five were omitted from the census frame that was used to draw the sample of Primary Sample Units (PSUs) for the Master Sample. Other omissions from the Master Sample frame included all institution EAs except workers’ hostels, convents and monasteries. EAs in the census database that were found to have less than sixty dwelling units during listing were pooled.

The Master Sample is a multi-stage stratified sample. The overall sample size of PSUs was 3000. The explicit strata were the 53 (DCs). The 3000 PSUs were allocated to these using the power allocation method. The PSUs were then sampled using probability proportional to size principles. The measure of size used was the number of households in a PSU as calculated in the census.

The sampled PSUs were listed with the dwelling unit as the listing unit. From these listings systematic samples of dwelling units per PSU were drawn. These samples of dwelling units form clusters. The size of the clusters differs depending on the specific survey requirements. The LFS uses one of the clusters that contain ten dwelling units.

3. Rotating panel methodology
Statistics South Africa uses a rotating panel methodology for the labour force survey, to ultimately obtain a better picture of movements into and out of the labour market over time. The rotating panel methodology involves visiting the same dwelling units on a number of occasions (in this instance, five at most). After the panel is established, a proportion of the dwelling units is replaced each round (in this instance, 20%). New dwelling units are added to the sample to replace those that are taken out. The advantage of this type of design is that it provides the basis for monitoring changes in the work situation of members of the same households over time, while retaining the larger picture of the overall employment situation in the country. It also allows for both longitudinal and cross-sectional analysis.
4. Coverage
The target population is all households, as well as residents in workers’ hostels and convents/monasteries. The survey does not cover institutions such as old age homes, hospitals, prisons and military barracks.

5. Weighting the LFS of March 2005
A two-stage weighting procedure was applied to the LFS

The PSU inclusion probability is given by

\[ P_{PSU} = \frac{n_{PSU}}{N_{PSU}} n_s \]

where \( n_{PSU} \) is the number of households constituting the selected PSU during census fieldwork, \( n_s \) is the number of PSUs per stratum, in this case the District Council (DC) and \( N_{PSU} \) is the number of households constituting the selected stratum during census fieldwork.

The household inclusion probability per PSU is given by

\[ P_{HH} = \frac{n_{HH}}{H_{HH}} \]

where \( n_{HH} \) is the number of selected dwelling units per PSU, \( H_{HH} \) is the number of dwelling units in the PSU in question at a particular time different from the census time.

The non-response adjustment factor is given by \( r_{HH} \), where \( r_{HH} \) is the response rate and is given by \( \frac{n_{RESP}}{n_T} \) where \( n_{RESP} \) is the number of responding households and \( n_T \) is the total number of visited households (in the sampled dwelling units) per PSU. The design weights adjusted for non-response are now given by

\[ W_{HH} = \frac{1}{P_{PSU} P_{HH} r_{HH}} \]

A SAS macro called CALMAR was used to benchmark \( W_{HH} \) to the population estimates. The mid-year population estimates were adjusted to give population estimates for March 2005 (when survey fieldwork took place).

6. Symbols used in the tables that follow
When a dash (-) is shown there were no respondents in the category.
When a single asterisk (*) is shown in the table, the sample size was too small to give reliable estimates.

7. Estimation and use of standard error
The published results of the labour force survey are based on representative probability samples drawn from the South African population, as discussed in the section on sample design. Consequently, all estimates are subject to sampling variability. This means that the sample estimates may differ from the figures that would have been produced if the entire South African population had been included in the survey. The measure usually used to indicate the probable difference between a sample estimate and the corresponding population figure is the standard error (SE), which measures the extent to which an estimate might have varied by chance because only a sample of the population was included.

There are two major factors, which influence the value of a standard error. The first factor is the sample size. Generally speaking, the larger the sample size, the more precise the estimate and the smaller the standard error. Consequently, in a national household survey such as the LFS, one expects more precise estimates at the national level than at the provincial level due to the larger sample size involved. The second factor is the variability among households in terms of the specific characteristics of the population being estimated, for example, the number of unemployed persons in the household.
8. Questionnaire
Details about the questions included in the LFS questionnaire administered by field-staff are presented below. As indicated in Table A, the LFS questionnaire has seven sections, each of which focuses on a particular area of relevance to labour market issues and associated concerns. In total, the questionnaire contains 103 questions.

District council/metro (DC)  
In South Africa there are 53 district councils (DCs) which consist of forty-seven (47) non-metropolitan areas and six (6) metropolitan areas. Of the forty-seven (47) non-metropolitan areas, forty-two (42) of the DCs are confined to a single province (DC 11 and DC41 do not exist). In addition, there are five DCs, which are cross provincial boundaries (CBDC) and are coded CBDC1, CBDC2, CBDC3, CBDC4 and CBDC8. Although DC9 is not classified as CBDC it also crosses provincial boundaries.

Metropolitan Areas (Metro):

Metropolitan areas are conurbations featuring high population density; intense movement of people, goods and services; extensive development; and multiple business districts and industrial areas. There are six metros, as follows:

Cape Town - City of Cape Town
Durban – Ethekwini municipality
East Rand – Ekurhuleni Metropolitan municipality
Johannesburg - City of Johannesburg Metropolitan municipality
Port Elizabeth - Nelson Mandela
Pretoria – City of Tshwane Metropolitan municipality

*Stayed nights (B_4Night)*

B.1 Has ...... stayed here for at least four nights on average per week during the last four weeks?

1 = Yes

2 = No  → End of questions for this person

**Note to users**
This question is asked for each person found in the selected dwelling. Those who are not household members (those who haven’t spent at least four nights per week) would be eliminated on the second category (2 = No). The instruction in this question is to end the interview for those who have answered “No” to this question. It is through this question where household members are identified within the selected dwelling.

**Universe**
Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

*Stayed in September (B_Sep04)*

B.2 Was ... part of this household in September 2004?

1 = Yes

2 = No

**Note to users**
This question is asked for each person found in the selected dwelling. It seeks to find out if the household members who are present in the household during the survey were also present during the survey conducted in September 2004. It is through this question that permanent household members are identified within the selected dwelling.

**Universe**
Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

**Final code list**

**Note to users**
This question is asked for all household members, to determine their gender. The enumerators are instructed not to assume the gender of the members of the households by just looking at people’s names or physical appearances. In this instance they have to ask the respondent the gender of each member of the household without any assumptions.

**Universe**
Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

**Note to users**
This question is asked to find out the age of the household members. This is asked for each member of the household. The instruction is to write the age in completed years to the nearest whole numbers and not in words. Thus if a person is two years and six months, the instruction is to write the two completed years. For children aged less than a year, the instruction is to write 00.

Note to users
This question is asked to determine the population group of persons from the selected dwelling. The respondent must answer for each member and the enumerator shouldn’t make any assumptions. The enumerator is also instructed not to make any conclusions, which may be influenced by his observation or using people’s names during the interview. This question may seem very sensitive to some respondents especially in this post apartheid era, but it is important to find out the composition of the South African population.

Note to users
This question is about the marital status of the members of the household. There are different kinds of marriages in South Africa, even if a couple is living together as husband and wife they are regarded to be married. Both modern and traditional marriages are considered in this question.

If the response is widow/widower, divorced or separated and never married the enumerator is instructed to go to Q 1.2, which is on language most often spoken at home.

1 = Yes
2 = No
3 = Don't know

→ Go to Q 1.7.a

**Note for users**

This question seeks to establish how many people have vocational training because of the increased recognition of the importance of this sort of training. Vocational training can help people earn a living either by getting a (better) paying job or by starting their own businesses. The instruction to the interviewer is to go to Q1.7.a if the answer to this question is NO or DON’T KNOW.

**Universe**

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

District council/metro (DC)  (@26   14.)
In South Africa there are 53 district councils (DCs) which consist of forty-seven (47) non-metropolitan areas and six (6) metropolitan areas. Of the forty-seven (47) non-metropolitan areas, forty-two (42) of the DCs are confined to a single province (DC 11 and DC41 do not exist). In addition, there are five DCs, which are cross provincial boundaries (CBDC) and are coded CBDC1, CBDC2, CBDC3, CBDC4 and CBDC8. Although DC9 is not classified as CBDC it also crosses provincial boundaries.

**Note to users**

This question is asked for all household members, to determine their gender. This question is only applicable if there is a “Yes” in the previous question, which determines whether a person is a household member or not. The enumerators are instructed not to assume the gender of the members of the households by just looking at people’s names or physical appearances. In this instance they have to ask the respondent the gender of each member of the household without any assumptions.

2.2 If “NO” to all parts of Question 2.1
Even though ….. did not do any of these activities in the last seven days, does he/she have a job, business, or other economic or farming activity that he/she will definitely return to?
For agricultural activities, the off-season in agriculture is not a temporary absence.
1 = Yes
2 = NO
→ Go to Section 3

Note to users
This is only applicable to household members who answered “No” to all the categories in Q 2.1. The main intention of this question is to qualify whether people have not done anything in the last seven days as it has been reflected in the previous question. The enumerators are instructed that for agricultural activities, any off-season in that field, people are considered to be active in their current jobs, and therefore economically active. For “No” response there should be a skip to Section 3.

Universe

**Note to users**
This is applicable to all household members aged 15 years and above who did not work and did not have a job to return to in the seven days prior to the interview (those with “No” in Q 2.2). The intention of this question is to find out the reasons people were not working in the seven days prior to the interview. For any other reason that is not specified in the given categories there is provision to specify it. However, if the person has found a job and is supposed to start at a definite date in the future, there should be a skip to Q 3.11.

**Kind of work done (Q313Occu)**
3.13.a What kind of work did …… do in his/her last job? Give occupation or job title.
Work includes all the activities mentioned earlier
Record at least two words: Car sales person, Office cleaner, Vegetable farmer, Primary School teacher, etc.
For agricultural work on own/family farm/plot, state whether for own use or for sale mostly.

3.13.b What were ……’s main tasks or duties in this job?
Examples: Selling fruit, repairing watches, keeping accounts, feeding and watering cattle, teaching children.

Note to users
This question is applicable to household members who have ever worked. It is important that the main tasks should be in English as the occupational codes are only in that language. The instruction to the enumerator is to ask the respondent the main tasks or duties done in his/her last job given in Q 3.13.a.
Questions 3.13.a and 3.13.b were written-in. The responses were used to determine the occupation. The occupation was coded to four digits on the basis of the International Standard Classification of Occupations (ISCO 88) (see elsewhere in documentation for codes).

Universe

For government or large organisations, give the name of the establishment and branch or division: e.g. Education Dept – Rapele Primary School; ABC Gold Mining, Maintenance Div.
Write ‘Own house’ or ‘No fixed location’, if relevant.

3.14.b What were the main goods and services produced at ……’s place of work? What were its main functions?
Examples: Repairing cars, Selling commercial real estate, Sell food wholesale to restaurants, Retail clothing shop, Manufacture electrical appliances, Bar/ restaurant, Primary Education, Delivering newspapers to homes, Transporting goods by rail.

Note to users
This question is applicable to household members who have been performing certain economic activities in the seven days prior the interview. It is important that the service or main goods are in English as the industry codes are only in this language. Although a person may have certain roles and responsibilities within the company she/he is working for, the enumerator is instructed to record the main goods or services produced by the company.
Questions 3.14.a and 3.14.b were written-in. The responses were used to determine the industry. The industry was coded to three digits on the basis of the International Standard Industrial Classification of all Economic Activities (ISIC) 1993 (see elsewhere in documentation for codes).

Universe
All household members aged 15 years and above and did not have jobs to return to in the four weeks prior to the interview but did not look for work.

If “YES” to response category 1
→ Go back to Q2.1 for that person

**Note to users**

This is applicable to all person’s unemployed or not economically active regardless of whether a person has worked before or not. The interest in this question is to find out how people support themselves even though they are not working. The enumerator is instructed to ask all the given categories. There should either be a “Yes” or a “No” for each category. For any other reason that is not categorised the enumerator has to complete the information in the provided space. If the answer is code “1 = Did odd jobs during the past seven days” where a person “did odd jobs during the seven days prior to the interview” the instruction is to go back to Q2.1.

<td></td>
</tr>
</tbody>
</table>

**Note to users**

This question is applicable to household members who have been performing certain economic activities in the seven days prior to the interview. It is important that the main tasks should be in English as the occupational codes are only in that language. The instruction to the enumerator is to ask the respondent the main tasks or duties done or usually done in his/her job given in Q 4.1.a.

Questions 4.1.a and 4.1.b were written-in. The responses from both questions were used to determine the occupation. The occupation was coded to four digits on the basis of the International Standard Classification of Occupations (ISCO 88) (see elsewhere in documentation for codes).

Note to users
This question is applicable to household members who have been performing certain economic activities in the seven days prior to the interview. It is important that the service or main goods are in English as the industry codes are only in this language. Although a person may have certain roles and responsibilities within the company she/he is working with, the enumerator is instructed to record the main goods or services produced by the company.
Questions 4.2.a and 4.2.b were written-in. The responses to these two questions were used to determine the industry. The industry was coded to three digits on the basis of the International Standard Industrial Classification of all Economic activities (ISIC) 1993 (see elsewhere in documentation for codes).

**Note to users**

This question is applicable to household members who have been performing certain economic activities in the seven days prior to the interview (from Q 2.1 and Q 2.2: “Yes”). This question is only applicable if there was no answer in Q 4.15.a, thus in case of a non-response, refusal or don’t know. Since this kind of information is very personal the enumerator is instructed to show a “score card” to the respondents for them to choose the category in which they fall. They are also asked to inform the respondent that there are certain acts that protect individuals in cases of these nature, so Statistics South Africa as a government department is therefore compelled to abide by them.

District council/metro (DC)  (@24 14.)
In South Africa there are 53 district councils (DCs) which consist of forty-seven (47) non-metropolitan areas and six (6)
metropolitan areas. Of the forty-seven (47) non-metropolitan areas, forty-two (42) of the DCs are confined to a singleprovince (DC 11 and DC 41 do not exist). In addition, there are five DCs, which are cross provincial boundaries (CBDC)
and are coded CBDC1, CBDC2, CBDC3, CBDC4 and CBDC8. Although DC9 is not classified as CBDC it also crosses provincial boundaries.

Metropolitan Areas (Metro):

Metropolitan areas are conurbations featuring high population density; intense movement of people, goods and services; extensive development; and multiple business districts and industrial areas. There are six metros, as follows:

- Cape Town - City of Cape Town
- Durban – Ethekwini municipality
- East Rand – Ekurhuleni Metropolitan municipality
- Johannesburg - City of Johannesburg Metropolitan municipality
- Port Elizabeth - Nelson Mandela
- Pretoria – City of Tshwane Metropolitan municipality

### Note to users
This question is about the dwelling the household occupies. The interest is on the main house and also considers the other dwelling if there is more than one structure that belongs to the household. The instruction to the enumerator is to make sure the respondent understands the kind of information requested. For example the other dwelling cannot exist without the main dwelling while the latter can without the former. For any other material used that is not specified in the given categories, there is a provision for them on code 11, to complete the required information. There should be only one mark for each category.
