Overview

ABSTRACT

The Mesebetsi labour Force Survey was undertaken to help fill some of the existing knowledge gaps with regard to the labour market in South Africa (Mesebetsi means "work" in Sesotho). The survey was a co-operation project of the Department of Labour and the Norwegian Institute for Applied Social Science (Fafo). Fafo was the implementing agency for the study and contracted MarkData (Pty) Ltd to conduct the fieldwork for the study. The Mesebetsi Labour Force Survey was a sample survey that was carried out in all parts of South Africa gathering information on employment and unemployment, education and training, working conditions and income in both urban and rural areas.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Units of analysis in the survey include households and individuals

Scope

NOTES

The survey focused on employment, demographics, and wages and covers all household members, i.e. about 50 000 individuals. A randomly selected person of working age in each household was interviewed in more depth. Among other things, they were asked about work status, time period in (or outside) the labour market as well as basic conditions of employment, labour relations, wages, occupation and the organisation for whom they work (for those in employment).

Coverage

GEOGRAPHIC COVERAGE

The survey had national coverage

GEOGRAPHIC UNIT

The lowest level of geographic aggregation covered by the data is enumerator area. The data is also at magisterial district level.

UNIVERSE

The representative sample was provided by the Department of Labour and Fafo and was designed to include the South African population of persons 15 years and older for the household section and 18 years and older for the individual RSI section
