### VERSION DESCRIPTION

v2: Edited, anonymised dataset for licensed access

### PRODUCTION DATE

2012

### NOTES

Version 1 of the dataset downloaded from Statistics South Africa's website on 22 october 2012 did not include a "persons" file. This file should contain demographic data for household members such as: age, gender, population group, relationships to household head, education, and some variables on employment status.

The data file, VCS 2012 RSI\_S21to27\_v1\_20121022, in version 1 had formatting problems with the variable "UQNO" which made it difficult to merge with the Household file.

In this version, version 2, the data file VCS 2012 RSI\_S21to27\_v1\_20121022 has been replaced with a new file, VCS 2012 RSI\_S21to27\_v2, to correct for the formatting of the variable, "UQNO". The new data file was acquired from Statistics South Africa on the 19th of March 2013.

## Overview

---

### ABSTRACT

The primary aim of the Victims of Crime Survey is to establish the prevalence of particular kinds of crime within a certain population. This may be victimisation experienced by individuals or households. Data from victimisation surveys can be used to supplement official police recorded crime statistics. The objectives of the survey are to:

- Provide information about the dynamics of crime from the perspective of households and the victims of crime.
- Explore public perceptions of the activities of the police, prosecutors, courts and correctional services in the prevention of crime and victimisation.
- Provide complimentary data on the level of crime within South Africa (SA) in addition to the statistics published annually by the South African Police Service (SAPS).

### KIND OF DATA

Sample survey data [ssd]

### UNITS OF ANALYSIS

The units of analysis in the study were individuals and households

## Scope

---

### NOTES

The VOCS 2012 focuses on people's perceptions and experiences of crime, as well as their views regarding their access to and effectiveness of the police and justice system. Households are also asked about community responses to crime. The survey profiled different aspects that are inherent in the different types of crimes, such as the location and timing of the different crimes, the use of weapons and the nature and extent of the violence that takes place.

## Coverage

---

**GEOGRAPHIC COVERAGE**

The survey had national coverage

**GEOGRAPHIC UNIT**

The lowest level of geographic aggregation covered by the data is province

**UNIVERSE**

The target population of the survey consists of all private households in all nine provinces of South Africa, as well as residents in workers' hostels. The survey does not cover other collective living quarters such as students' hostels, old-age homes, hospitals, prisons and military barracks. It is only representative of non-institutionalised and non-military persons or households in South Africa.

# Sampling

## Sampling Procedure

---

The sample design for the VOCS 2012 was based on a master sample (MS) originally designed for the Quarterly Labour Force Survey (QLFS) as a sampling frame. The MS is based on information collected during the 2001 Population Census conducted by Stats SA. The MS has been developed as a general-purpose household survey frame that can be used by all household-based surveys, irrespective of the sample size requirement of the survey. The VOCS 2012, like all other household-based surveys, uses a MS of primary sampling units (PSUs) which comprises census enumeration areas (EAs) that are drawn from across the country.

The sample for the VOCS 2012 used a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage. The sample was designed to be representative at provincial level. A self-weighting design at provincial level was used and MS stratification was divided into two levels. Primary stratification was defined by metropolitan and non-metropolitan geographic area type. During secondary stratification, the Census 2001 data were summarised at PSU level. The following variables were used for secondary stratification: household size, education, occupancy status, gender, industry and income. A randomised probability proportional to size (RPPS) systematic sample of PSUs was drawn in each stratum, with the measure of size being the number of households in the PSU. The sample size of 3 080 PSUs was selected. In each selected PSU a systematic sample of dwelling units was drawn. The number of DUs selected per PSU varies from PSU to PSU and depends on the inverse sampling ratios (ISR) of each PSU. The sample size for the VOCS 2012 is approximately 30 000 dwelling units.

## Weighting

---

### Sampling weights

The sampling weights for the data collected from the sampled households are constructed in such a manner that the responses could be properly expanded to represent the entire civilian population of South Africa. The design weights, which are the inverse sampling rate (ISR) for the province, are assigned to each of the households in a province. The design weights for the VOCS 2012 sample were obtained by applying three adjustments to the base-weights. The first adjustment was applied to account for informal and/or growth PSUs. The second adjustment was applied to account for the EAs with less than 25 households and the third was the non-response adjustment. In addition, there were two types of non-response adjustments: PSU non-response adjustment and household non-response adjustment. The PSU non-response adjustment was applied at the stratum level, whereas the household non-response adjustment was applied at the PSU level.

### Final survey weights

The final survey weights were constructed by calibrating the adjusted non-response design weights to the known population estimates as control totals using the 'Integrated Household Weighting' method. The lower bound for the calibrated weights was set equal to 50 when computing the calibrated weights with the StatMx software (Statistics Canada software). The VOCS 2012 sample was weighted using the population estimate of mid-November 2011. The final weights were benchmarked to the known population estimates of 5-year age groups by population groups by gender at national level, and broad age groups at province level. The calibrated weights are constructed in such a way that all persons in a household would have the same final weight. Records for which the age, population group or gender had item non-response could not be weighted and were therefore excluded from the dataset. No additional imputation was done to retain these records.

# Questionnaires

## Overview

---

The VOCS 2012 questionnaire was based on the questionnaires used in the International Crime Victim Survey (ICVS) and previous VOCSS conducted by the Institute for Security Studies (ISS) and Statistics SA. The questions are covered in 27 sections and deal with the following topics:

Flap Demographic information (name, sex, age, population group, etc.)  
 Section 1 Household-specific characteristics (education, economic activities and household income sources)  
 Section 2 Beliefs about crime  
 Section 3 Individual and community response to crime  
 Section 4 Victim support and other interventions  
 Section 5 Citizen interaction or community cohesion  
 Section 6 Perception of the police service  
 Section 7 Perception of the courts  
 Section 8 Perception of correctional services  
 Section 9 Corruption experienced by the respondent  
 Section 10 Experience of household crime (screening table)  
 Section 11 Theft of car experienced by a household member(s) in the previous 12 months  
 Section 12 Housebreaking or burglary when no one was at home in the previous 12 months  
 Section 13 Theft of livestock, poultry and other animals in the previous 12 months  
 Section 14 Theft of crops planted by the household in the previous 12 months  
 Section 15 Murder experienced by a household member(s) in the past 12 months  
 Section 16 Theft out of a motor vehicle experienced by a household member(s) in the previous 12 months  
 Section 17 Deliberate damaging/burning or destruction of dwelling experienced by a household member(s) in the previous 12 months  
 Section 18 Motor vehicle vandalism or deliberate damage of a motor vehicle experienced by a household member(s) in the previous 12 months  
 Section 19 Home robbery (including robbery often around or inside the household's dwelling) experienced by a household member(s) in the previous 12 months

Sections 20–27 of this questionnaire required that an individual be randomly selected from the household to respond to questions on crimes committed on them as an individual. The methodology used was to select a person 16 years or older, whose birthday was the first to follow the survey date. These sections collected data on:

Section 20 Experiences of individual crimes (screening table) in the past 5 years and in the previous 12 months  
 Section 21 Theft of bicycle experienced in the previous 12 months  
 Section 22 Theft of motorbike or scooter experienced in the past 12 months  
 Section 23 Car hijacking (including attempted hijacking) experienced in the previous 12 months  
 Section 24 Robbery (including street robberies and other non-residential robberies, excluding car or truck hijackings, and home robberies) experienced in the previous 12 months  
 Section 25 Assault experienced in the previous 12 months  
 Section 26 Sexual offences (including rape) experienced in the previous 12 months  
 Section 27 Consumer fraud experienced by the individual experienced in the previous 12 months  
 All sections Comprehensive coverage of all aspects of domestic tourism and expenditure

The final data files correspond to sections of the questionnaire as follows:

Person: Data from Flap and Section 1 (excluding Section 1.6 and 1.7)  
 Household: Data from Section 1.7 and Section 10–19  
 RSI experience of crime: Data from Section 20–27

The VOCS 2012 is comparable to the previous VOCSS in that several questions have remained unchanged over time. Where possible, it was generally indicated in the report. The VOCS 2012 sample size was the same as for VOCS 2011 which is more than double of the previous surveys (surveys before VOCS 2011). The current survey can thus provide more accurate estimates than the previous surveys, for example at provincial level and for domain variables, such as gender and race. Caution should be exercised when running cross tabulation of different crimes by provinces and other variables. In most cases the reported experienced cases were too few.

### Other forms of Data Appraisal

1. The "persons" file was not provided with version 1 of the dataset.
2. The metadata document provided with the data files has errors which reflect that it was copied and pasted from the VCS 2011 metadata document, for example the caption for Table 2 is "Table 2: Contents of the VOCS 2011 questionnaire".
