VERSION DESCRIPTION

v1.1: Edited, anonymised dataset for licensed distribution

Version 1 of the Volunteer Activities Survey 2010 was downloaded from Statistics South Africa's website on 25th of February 2013.

This version, version 1.1, is version 1 with changes made to variable labels to make them unique for each activity.

PRODUCTION DATE

2013-09-17

NOTES

Version 1 of the Volunteer Activities Survey 2010 was downloaded from Statistics South Africa's website on 25th of February 2013.

This version, version 1.1, is version 1 with changes made to variable labels to make them unique for each activity.

Overview

ABSTRACT

Statistics South Africa (Stats SA) conducted its first Volunteer Activities Survey (VAS) in the second quarter of 2010 (Q2:2010). This is a household-based sample survey that collects data on the volunteer activities of individuals aged 15 years and older who live in South Africa. Households selected to take part in the Quarterly Labour Force Survey (QLFS) were used in the survey. The survey collected data on these activities undertaken in the four weeks preceding the survey interview.

Volunteer activities are defined as activities willingly performed for little or no payment to provide assistance or promote a cause. These activities can be performed either through an organisation or directly for someone outside one's own household. They take many forms, from picking up groceries for a disabled neighbour to participating in community policing. At the time the survey was conducted it was recommended that volunteer activities performed for immediate family members should not be regarded as volunteer work. However, the definition of what constitutes one's family, or even immediate family, varies among countries and cultures, and differentiating this practice is difficult to achieve. In line with the International Labour Organisation's (ILO) Manual on the Measurement of Volunteer Work, it was finally decided that activities performed for immediate family members should be regarded as volunteer work as long as the recipient is not a member of the household. Thus only activities performed for household members are excluded.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

The units of analysis in the survey are households and individuals

Scope

NOTES

The scope of the Volunteer Activities Survey 2010 includes: types of volunteer activities, reasons for volunteer activity, time spent on volunteer activity, and monetary value of volunteer activity

Coverage

GEOGRAPHIC COVERAGE

The survey had national coverage

GEOGRAPHIC UNIT

The lowest level of geographic aggregation covered by the data is province.

UNIVERSE

The target population of the survey consists of individuals aged 15 years and older who live in South Africa and who are members of households living in dwellings that have been selected to take part in the second quarter (Q2: 2010) of the Quarterly Labour Force Survey (QLFS)

Sampling

Sampling Procedure

The Quarterly Labour Force Survey (QLFS) sample frame was used for data collection in the Volunteer Activities Survey. The sample for the QLFS is based on a stratified two-stage design with probability proportional to size (PPS) sampling of primary sampling units (PSUs) in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage. The frame was developed as a general purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample is based on information collected by Statistics SA during the 2001 Population Census and is designed to be representative at the provincial level and within provinces at the metro/non-metro level. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms and tribal land.

Weighting

Sampling weights for the data collected from the sampled households are constructed so that responses can be expanded appropriately to represent the entire population of South Africa. The weights are the result of calculations involving several factors, including design weights, adjustment for non-response, and benchmarking to known population estimates. The final survey weights are constructed by calibrating the adjusted base weight to the known population counts at national and provincial levels, cross-classified by 5-year age groups (0-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, and 65 and over), gender and race. The calibrated weights are constructed to ensure that all persons in a household have the same final weight (integrated weighting).

Questionnaires

Overview

The questionnaire was administered in each household to individuals aged 15 years and older. The questionnaire collected data on demographic characteristics, type of volunteer activity, reasons for volunteer activity, time spent on volunteer activity, and monetary value of volunteer activity.

Data Collection

Data Collection Dates

Start	End	Cycle
