Sampling

Sampling Procedure

The universe from which the AMPS sample is drawn, comprises adults aged 15 years or older in South Africa. In the case of each racial group, certain areas were excluded from consideration, as containing no persons or a negligible number of persons in a given group. A multistage, stratified, quasi-probability design was employed. This study is based on a full annual sample. The data were collected by personal, in-home interviews.

Weighting

The AMPS 2011 dataset has the following weight variables:

- 1) Adult Population Weights - "pwgt".
- 2) Household Weights (not to be used with personal demographics) - "hhwgt".
- 3) Household Decision Maker Weights - to be used with personal demographics. These must be used for personal analyses on household items - only on a filtered of male heads of household and female housewives - "hhdwgt".
- 4) Purchaser Weights - These must be used for the household products only on a filtered base of those wholly or partly responsible for household purchases - "hhpwgt".
