

Wave 4 Changes between V1.0 & V1.1

This document highlights the changes between Wave 3 data V1.0 (previous public release data set) compared to V1.1.

Panel weights and post-stratified weights

There were some changes to the weights variables, *w4_pweight* in the *innderived* data file and the *w4_wgt* in the *hhderived* data file. Changes in these variables were caused by:

1. Missing panel weights for some babies born to CSM mothers after Wave 1 (2008).
2. One (now adult) respondent with a missing weight.

CSM/TSM Changes

The following CSM/ TSM changes were made to the data.

1. PID 721857 – Is a TSM who was incorrectly reflected as a CSM.
2. PID 682522 – This child was previously not recorded as being resident in any household. Her record has now been corrected to reflect that she is a resident in the household in which she shares with her mother.
3. PID 617044 – This individual was interviewed under pid 622914. Pid 617044 has now been removed as it is a duplicate of pid 622914.

Interview dates

To correct a data error an update was made to 13 questionnaires to update their month of interview from September 2014 to October 2014.
