Quarterly Labour Force Survey Quarter 3, 2016: Metadata
Methodology

Introduction

The QLFS sample covers the non-institutional population except for workers' hostels. However, persons living in private dwelling units within institutions are also enumerated. For example, within a school compound, one would enumerate the schoolmaster’s house and teachers’ accommodation because these are private dwellings. Students living in a dormitory on the school compound would, however, be excluded.

Survey requirements and design

The Quarterly Labour Force Survey (QLFS) uses the Master Sample frame which has been developed as a general-purpose household survey frame that can be used by all other Stats SA household surveys that have a design requirement reasonably compatible with the QLFS. The 2013 Master Sample is based on information collected during the 2011 Population Census conducted by Stats SA. In preparation for Census 2011, the country was divided into 103 576 enumeration areas (EAs). The Census EAs, together with the auxiliary information for the EAs were used as the frame units or building blocks for the formation of primary sampling units (PSUs) for the Master Sample; since they covered the entire country and had other information that is crucial for stratification and creation of PSUs. There are 3 324 primary sampling units (PSUs) in the Master Sample with an expected sample of approximately 33 000 dwelling units (DUs). The number of PSUs in the current Master Sample (3 324) reflects an 8.0% increase in the size of the Master Sample compared to the previous (2008) Master Sample (which had 3 080 PSUs). The larger Master Sample of PSUs was selected to improve the precision (smaller coefficients of variation, or CVs) of the QLFS estimates.

The Master Sample is designed to be representative at provincial level and within provinces at metro/non-metro levels. Within the metros, the sample is further distributed by geographical type. The three geography types are: Urban, Tribal and Farms. This implies, for example, that within a metropolitan area, the sample is representative of the different geography types that may exist within that metro.

It is divided equally into four sub-groups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one (1) to four (4) and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the QLFS is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.
Sample rotation

For each quarter of the QLFS, a ¼ of the sampled dwellings is rotated out of the sample. These dwellings are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings are expected to remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household.

Therefore, if a household moves out of a dwelling after being in the sample for, say two quarters, and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (or unoccupied).

Weighting

The sample weights were constructed in order to account for the following: the original selection probabilities (design weights), adjustments for PSUs that were sub-sampled or segmented, excluded population from the sampling frame, non-response, weight trimming and benchmarking to known population estimates from the demographic analysis division within Stats SA.

Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edits failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents. Weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.). The adjustment for total non-response was computed at two levels of non-response: PSU non-response and household non-response.

Final survey weights

In the final step of constructing the sample weights, all individuals within a household are assigned the same adjusted base weight. The adjusted base weights are calibrated such that the aggregate totals will match with independently derived (by Stats SA Demography Division) population estimates (from the Demographic Analysis Division) for various age, race and gender groups at national level and individual metropolitan and non-metropolitan area levels within the provinces. The calibrated weights are constructed using the constraint that each person within the same household should have the same calibrated weight, with a lower bound on the calibrated weights set at 50.

Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in Agriculture in Western Cape, number of females employed in Manufacturing, etc.
Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-responses and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS, are the Taylor-series Linearization, Jack-knife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007). The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance).

The coefficient of variation provides such a measure. It is the ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage. It is very useful in comparing the precision of several different survey estimates, where their sizes or scale differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If p-value <0.01, the difference is highly significant; if p-value is between 0.01 and 0.05, the difference is significant; and if p-value >0.05, the difference is not significant.

Contents of CD

The CD contains a flat, ASCII, fixed-field file, with one line of given length per record. This format was chosen so as to make the data usable with as many statistical programs as possible, and thus accessible to as wide a range of people as possible.

Users can also access, explore and download the micro data in various formats, i.e. SAS, SPSS, Stata, etc., as well as the metadata from StatsOnline at www.statssa.gov.za.

Other important information for users can be found in the following:

- Questionnaire
- Additional code lists (occupation and industry)
- Relevant statistical release
- Record layouts
- Stats SA website: www.statssa.gov.za

The data file

The data file contains information on sections 1, 2, 3, 4 and 5. Each section contains the following information for each variable:

Description of variables

Descriptive name: This is a short description of the variable with the variable name in brackets.

Position of the variable: The position of a variable within a record is recorded in the format (@xxx y.). '@xxx' indicates that the variable starts at position (i.e. column) xxx, and 'y' indicates the length of the field.

Final code list: The range of valid values for variables. For continuous variables it only reflects the upper and lower limits.

Not applicable: The code for 'missing' values is given for each variable (□ = Not applicable).

Note to users: Additional information for further clarity on questions.
DATA FILE

Unique number (UQNO)  
Unique household identifier allocated to each household.

Valid range: 160100720000002701–987105530000016001

Person number (PERSONNO)  
Person (respondent) number

Valid range: 01–25

SECTION 1
This section covers particulars of each person in the household.

Question 1.2

Stayed at least four nights (Q12NIGHTS)  

<table>

</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Yes</td>
</tr>
<tr>
<td>2</td>
<td>No  → End of question for this person</td>
</tr>
</tbody>
</table>

Note to users
This question was asked for each person found in the selected dwelling. Those who were not household members (those who had not spent at least four nights per week during the last four weeks) were excluded from the data (2 = No). The instruction in this question was to end the interview for those who had answered 'No' to this question. It is by means of this question that household members are identified within the selected dwelling.

Universe
Every person who had stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

Final code list
1 = Yes
Question 1.3

</tr>
<tr>

<td></td>
<td>2</td>
</tr>
</tbody>
</table>

**Note to users**

This question was asked for all household members, to determine their gender. Enumerators were instructed not to assume the gender of household members by just looking at people’s names or physical appearances. In this instance, they had to ask the respondent the gender of each member of the household without any assumptions.

**Universe**

Every person who had stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

**Final code list**

1 = Male  
2 = Female

Question 1.5

</tr>
<tr>
<td>4 = White</td>
<td></td>
<td>4</td>
</tr>
<tr>
<td>5 =Other, specify in box at the bottom</td>
<td></td>
<td>5</td>
</tr>
</tbody>
</table>

**Note to users**

This question was asked to determine the population group of persons from the selected dwelling units. The respondent had to answer for each member and the enumerator was not to make any assumptions. The enumerator was also instructed not to come to any conclusions, which may be influenced by his observation or using people’s names during the interview. This question may seem very sensitive to some respondents, especially in this post-apartheid era, but it is important to find out the composition of the South African population.

**Universe**

Every person who had stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.
Final code list
1 = African/Black
2 = Coloured
3 = Indian/Asian
4 = White

Question 1.6

Marital status (Q16MARITALSTATUS) (@24 1.)

</tr>
</tbody>
</table>

Note to users
This question is about the marital status of the members of the household. Both modern and traditional marriages are considered in this question.

Universe
Every person who had stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

Final code list
1 = Married
2 = Living together like husband and wife
3 = Widow/Widower
4 = Divorced or separated

*If code 30-31, Go to Q1.9*

**Diploma or certificate should have been at least six months study duration full time (or equivalent)**

Write the appropriate code in the boxes.
**Note to users**

Enumerators were instructed that it was only those qualifications already obtained which had to be entered. That means the current level of study with which a person was still busy, was not applicable. It was very important to complete each record even if the person had not attended school. Enumerators were instructed to record diplomas and certificates that were of at least six months’ duration. If the answer to Question 1.7 is code 98 or 00–12 or 29–30, the instruction is to go to Question 1.9. If code 13–28 is selected, the instruction is to go to Question 1.8.

**Note to users**

This question should only be asked to persons who have obtained a post-school qualification (diploma, certificate or degree) – code 13–28 in Q1.7. The interest in this question is in establishing the field of study in which the qualifications have been obtained.
**Universe**
Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior to the interview.

Note to users

The question focuses on attendance of educational institutions. 'Educational institution' can include school, university of technology, university, home school, pre-school, crèche, day care, distance/correspondence education, etc. If the respondent is attending an educational institution, the survey officer has to proceed to Question 1.10. If the individual is not attending an educational institution, the enumerator should skip to Section 2.

Universe

Every person who has stayed in the households in selected dwelling units at least four nights per week in the four weeks prior the interview.

**Note to users**

This question was answered by the enumerator. It was recommended that if all the members of the household who qualified for this section were present, they should answer for themselves. It is by means of this question that the accuracy of the information received can be qualified, as it would reflect whether people answered for themselves or a proxy responded on their behalf.

**Universe**

All members of the households in selected dwelling units aged 15 years and older.

**Final code list**

1 = Yes
2 = No
9 = Unspecified
□ = Not applicable

**Note:** Questions 2.1–2.3 are not included in the data, as these questions were asked for administrative purposes and as such do not have any impact on the analysis of the data.
Question 2.4

Note to users
This question is applicable to all household members aged 15 years and older, regarding their involvement in economic activities in the seven days prior to the interview. This is part of the questionnaire where there would be a differentiation between the economically active population and those who are not economically active. The instruction to enumerators was that they should consider those activities that lasted for at least an hour within the last seven days. In order to be certain that the categories had been answered, there should be either a 'Yes' or 'No' answer to all of them. Most importantly, if there was a 'Yes' to any part of this question, there should be a skip to Section 4. If all the categories were 'No', there should be a continuation to the next question.

Question 2.7

*Main reason absent from work (Q27RSNABSENT)*

This question was aimed at establishing the reasons why people were absent from their normal activities in the seven days prior to the interview. If more than one reason was given, only the main one was recorded. A provision was made to specify the reasons that were not on the pre-coded list. If option 01, 02 or 04 were selected, the enumerator should go to Section 4. If option 13 were selected, the enumerator should go to Question 3.1; for all other reasons the enumerator should proceed to Question 2.7a.

Question 3.15

Previous occupation (Q315PREVOCUPATION)

Note to users
This question was applicable to household members who had worked before, but were currently unemployed. It is important that the main tasks should be in English as the occupational codes are in that language only. The instruction to the enumerator was to ask the respondent the main tasks or duties done in his/her last job given in Question 3.15.a. Questions 3.15.a and 3.15.b were write-in questions. The responses were used to determine the person's last occupation. The occupation was coded to four digits on the basis of the South African Standard Classification of Occupations (SASCO) (see occupation code list).
**Universe**

All household members aged 15 years and older, who had worked before and were currently unemployed or not economically active.

*Previous industry (Q316PREVINDUSTRY) (@77 3.)*

3.16.a  What was the name of the establishment / institution / business / organisation that you worked for (the one that paid your salary)?

*For government or large organisations, give the name of the establishment and branch or division: e.g. Education Dept - Ralele Primary School; Harmony Gold Mining - Maintenance Div.*

*For individuals who worked from home and their businesses don’t have names write “Own house”*

*For individuals who worked in private household write “Private household”*

*For individuals who worked for businesses without names write “No Name”*

3.16.b  What were the main goods or services produced at your place of work or its main functions?

*Examples: Repairing cars, Selling commercial real estate, Sell food wholesale to restaurants, Retail clothing shop, Manufacture electrical appliances, Barber/restaurant, Primary Education, Delivering newspapers to homes. For domestic workers write “private household”.*
**Note to users**

This question was applicable to household members who had been employed previously, but were currently unemployed or economically inactive. It is important that the service or main goods produced at the respondent's previous work are in English as the industry codes are in this language only. Although a person may have had certain roles and responsibilities within the company she/he was working for, the enumerator was instructed to record the main goods or services produced by the company. Questions 3.16.a and 3.16.b were write-in questions. The responses were used to determine the type of industry. The industry was coded to three digits on the basis of the Standard Industrial Classification of all Economic Activities (SIC) (see industry code list).

SECTION 5

Ask for all persons aged 15 years and older.

Question 5.9

5.9 In the last week (Monday to Sunday)...

(a1) Did you do any work on your own or the household’s plot, farm, food garden, cattle post or kraal or help in growing farm produce or in looking after animals for the household’s own consumption?

Examples: ploughing, harvesting, looking after livestock.

(a2) If yes, for how many hours?

(b1) Did you fetch water or collect wood/dung for household use?

(b2) If yes, for how many hours?

(c1) Did you produce any other goods for household use?

Examples: clothing, furniture, clay pots, etc.

(c2) If yes, for how many hours?

(d1) Did you do any construction or major repair work on your own home, plot, cattle post or business or those of the household?

(d2) If yes, for how many hours?

(e1) Did you catch any fish, prawns, shells, wild animals or other food for household consumption?

(e2) If yes, for how many hours?

Note to users

This question was applicable to all household members aged 15 years and older, regarding their involvement in economic activities in the last seven days prior to the interview. This is part of the questionnaire where there would be a differentiation between the economically active population and those who are not economically active. The instruction to enumerators was that they should consider those activities that lasted for at least an hour within the seven days. In order to be certain that the categories had been answered, there should be either a ‘Yes’ or ‘No’ answer to all of them. If ‘Yes’ to any of these questions, the number of hours spent on the activity had to be indicated as well.

Question 1.4

Age (Q14AGE)

This is a derived variable indicating the age of the household member. Age of the household member was derived from Question 1.4 of the questionnaire.

This question was asked for each member of the household. The instruction was to write the age in completed years to the nearest whole numbers and not in words. Thus, if a person was two years and six months, the instruction was to write the two completed years. For children aged less than a year, the instruction was to write 000.

Universe
