# Questionnaires

## Overview

---

The small area census method allowed for iterative revisions of the survey instruments, to explore emergent themes. This resulted in successive refinements of the questionnaires. There were five revisions of the survey in total.

## Data Collection

### Data Collection Dates

Start	End	Cycle
2010	2013	N/A

### Data Collection Mode

Face-to-face [f2f]

### Data Collection Notes

The rationale for the SLF research was the relative scarcity of detailed information on township micro-enterprises at the area level. To address the shortage of area information, SLF advanced a mixed methods approach termed 'small-area census'. First, a census of all verifiable economic activities in an area was conducted, to identify spatial distribution and patterns. Second, sector-selected respondents from all identified micro-enterprises were interviewed. Third, qualitative and participatory evidence was examined, along with the survey data to understand the social, economic and political dynamics facing micro-enterprises in the township context.

### Questionnaires

The small area census method allowed for iterative revisions of the survey instruments, to explore emergent themes. This resulted in successive refinements of the questionnaires. There were five revisions of the survey in total.
