### VERSION DESCRIPTION

v1.1: Edited, anonymised dataset for licensed distribution.

### NOTES

Version 1.0 of the October Household Survey 1998 dataset is the dataset received from Statistics South Africa.

This version, version 1.1, includes changes made in version 1.0. Some of the variables in version 1.0 were strings and in version 1.1 these have now been converted to numeric variables for ease of use.

## Overview

---

### ABSTRACT

The October Household Survey is an annual survey based on a probability survey of a large number of households (ranging from 16 000 in 1996 through to 30 000 in 1997 and 1998, depending on the availability of funding). It covers a range of development indicators, including unemployment rates (official and expanded), according to standard definitions of the International Labour Organisation (ILO).

### KIND OF DATA

Sample survey data [ssd]

### UNITS OF ANALYSIS

Units of analysis in the survey are households and individuals

## Scope

---

### NOTES

The scope of the OHS 1998 includes: employment, unemployment, informal sector, internal migration, services available by type of dwelling, access to health and social services, safety and well-being of household, households by average household size and type of dwelling, level of education, quality of life, health statistics, vital statistics.

# Sampling

## Sampling Procedure

---

A sample of 20 000 households was drawn in 2 000 enumerator areas (EAs) (that is 10 households per enumerator area). A two-stage sampling procedure was applied and the sample was stratified, clustered and selected to meet the requirements of probability sampling. The sample was based on the 1996 Population Census enumerator areas and the estimated number of people from the administrative records of the 1996 population Census. The sampled population excluded all prisoners in prisons, patients in hospitals, people residing in boarding houses and hotels (whether temporary or semi-permanent). The sample was explicitly stratified by province, Transitional Metropolitan Council (TMC) and District Council (DC). A square root method was used for the allocation of the sample EAs to the explicit strata.

Within each explicit stratum the EAs were stratified by simply arranging them in geographical order by magisterial district and, within the magisterial district, by EA. The allocated number of EAs was systematically selected with probability proportional to size in each stratum. The measure of size was the estimated number of people in Each EA. A systematic sample of 10 households was drawn.

## Weighting

---

The 1996 population Census was used as a basis for the weighting.

Household weights were calculated by using the reciprocal of the inclusion probabilities.

Since the sample selection was done in two stages (i.e. first stage - selection of an EA, second stage - selection of a household in the selected EA):

The inclusion probability of an EA (say  $p_1$ ):

Since this was done with probability proportional to size (size being the number of persons residing in the EA),

$$p_1 = m \cdot A_i / S_{A_i}$$

$m_i$  - number of EAs in the sample in the  $i$ -th stratum (where stratum is the District Council in a province)

$A_i$  - number of persons residing in the selected EA

$S_{A_i}$  - total number of persons in the population in the  $i$ -th stratum

The inclusion probability of the household (say  $p_2$ ):

Since ten (10) households (per EA) were selected systematically,

$$p_2 = 10/\text{number of households in the selected EA}$$

Household weight =  $(1/p_1 \cdot p_2)$ . Relative scaling was done on this weight to cater for the urban/non-urban split per province.

To calculate the person weight, the data was post-stratified by province, gender and age group (5 year age groups). The 1996 Census figures (adjusted for growth) were used as benchmarks. Relative scaling was also done on this weight to cater for the population group and urban/non-urban splits.

# Questionnaires

## Overview

---

The data files in the October Household Survey 1997 (OHS 1997) correspond to the following sections in the questionnaire:

PERSON: Data from Section 1 and Section 4

BIRTHS: Data from Section 2

CHILDREN: Data from Section 2

WORKER: Data from Section 3

MIGRANT: Data from Section 5

DEATHS: Data from Section 6

MIGRATION: Data from Section 7

DOMESTIC: Data from Section 8

HOUSE: Data from Section 9
