INDEX

	TABLE NO.	PAGE
Foreword by the Minister for Finance and Development		vii
Introduction		ix
Extract from the Minister for Finance and Development's Budget speech 1956		xi
Introductory Notes		xvii
 LAND AND CLIMATE		
Area of Kenya Colony and Protectorate	1	1
Area of provinces and districts	2	1
Lakes, mountains and national parks	3	1
Land utilisation	4	2
Rainfall: Main stations, 1955, compared with the average	5	2
Temperature: Main stations, 1955, compared with the average	6	3
Relative humidity: Main stations, 1955, compared with the average	7	3
Sunshine: Main stations, 1955, compared with the average	8	4
 CONSTITUTION		
Legislative Council: Composition	9	5
Legislative Council: Analysis of membership (March, 1956)	10	5
 POPULATION	11	6
Population		
Population in census years	11	
Civil population estimates, 1946-55 (de facto population as at mid-year by race)	12	7
Population Census, 1948		
Civil population by sex, age, nationality, religion, industry and occupation	13	8
Population of main townships	14	9
Population density by province, district and race	15(a)	10
Distribution of population of districts by density per square mile	15(b)	11
Main tribes	16	11
Main tribes by district	17	12
Non-African Population: Average number of live births per woman ever married	18	13
African Population: Average number of live births per woman	19	13
 MIGRATION		15
Total reported immigration	20	15
Total reported emigration	21	15
Excess of immigrants over emigrants	22	15
Reported new permanent immigration	23	16
Reported change of status: Visitors who are accepted as new permanent immigrants	24	16
Reported permanent emigration	25	16
Excess of new permanent immigrants over permanent emigrants	26	17
Total new permanent immigration, of all types 1955: Analysis by race, sex and age groups	27	17
Total new permanent immigration, of all types 1955: Analysis by race, sex and main occupation	28	17
Reported permanent emigration, 1955: Analysis by race, sex and main occupation	29	18
Total new permanent immigration and permanent emigration: Analysis of European aliens by nationality	30	18
Visitors and persons in transit: Reported immigration by all routes	31	19
Visitors and persons in transit: Analysis of Europeans by reported nationality	32	19
 EXTERNAL AND INTERTERRITORIAL TRADE		
External Trade		
Volume and visible balance of external trade, 1950-1955	33	22
Domestic exports: Principal commodities by quantity and value, 1949-1955	34	22
Domestic exports: Principal commodities by percentage of total value, 1949-1955	35	23
Net imports: Total value by S.I.T.C. sections, 1951-1955	36	23
Retained imports (i.e. net imports—re-exports): Total value by S.I.T.C. sections, 1951-1955	37	23
Retained imports (i.e. net imports—re-exports): Percentage distribution by S.I.T.C. sections, 1951-1955	38	24
Domestic exports: Value by principal countries of destination, 1949-1955	39	24
Net imports: Value by principal countries of origin, 1950-1955	40	25
Domestic exports and re-exports: Value by currency group, 1950-1955	41	26
Domestic exports and re-exports: Value by sterling and non-sterling areas, 1950-1955	42	26
Net imports: Value by currency group, 1950-1955	43	26
Net imports: Value by sterling and non-sterling areas, 1950-1955	44	27

	TABLE NO.	PAGE
EXTERNAL AND INTERTERRITORIAL TRADE—(Contd.)		
Domestic exports: Value of principal commodities by principal countries of destination, 1954	45 (a)	27
Domestic exports: Value of principal commodities by principal countries of destination, 1955	45 (b)	27
Net imports: Value of S.I.T.C. sections by principal countries of origin, 1954	46 (a)	28
Net imports: Value of S.I.T.C. sections by principal countries of origin, 1955	46 (b)	28
Net imports: Principal articles by quantity and value, 1954-1955	47	29
Classification by stage of production and use: Retained imports, 1951-1955	48	30
Kenya territorial exports index: Selected commodities, 1949-1955	49	31
Kenya territorial exports index: All selected commodities combined, 1949-1955	50	31
East African exports index: All selected commodities combined, 1949-1955	51	31
East African imports index: Selected articles, 1950-1955	52	31
Interterritorial Trade		
Local produce and manufactures: Principal commodities exported to Tanganyika, 1950-1955	53	32
Local produce and manufactures: Principal commodities exported to Uganda, 1950-1955	54	32
Local produce and manufactures: Principal commodities imported from Tanganyika, 1950-1955	55	32
Local produce and manufactures: Principal commodities imported from Uganda, 1950-1955	56	33
Summary of trade in local produce and manufactures: East African territories, 1954	57 (a)	33
Summary of trade in local produce and manufactures: East African territories, 1955	57 (b)	33
TRANSPORT AND COMMUNICATIONS		
East African Railways and Harbours Administration		
Railways East Africa: Mileage of lines open for traffic	58	35
E.A. Railways & Harbours: Revenue	59	35
E.A. Railways & Harbours: Expenditure	60	36
Rail, road and water transport: Passenger, livestock and goods traffic (East Africa)	61	36
Traffic dealt with at main stations, Kenya	62	37
Railway locomotives, rolling stock and track materials: Retained imports, Kenya	63	38
Railway locomotives, rolling stock and track materials: Retained imports, total East Africa	64	38
Stocks of transport equipment held by East African Railways and Harbours (East Africa)	65	38
Shipping		
Kenya ports: Number of vessels entered	66	39
Kenya ports: Net registered tonnage entered	67	39
Kenya ports: Number of vessels entered by nationality and type of trade	68	40
Passengers and cargo handled at Mombasa	69	41
Air Transport		
Kenya main airfields by type: As at June, 1955	70	41
Progress: East African Airways Corporation (East Africa)	71	42
Commercial aircraft movements: Passengers and freight handled at main airports	72	42
Roads and Motor Vehicles		
Mileage of classified roads: As at 30th June, 1955	73	43
Licensed motor vehicles	74	44
Motor vehicles: New registration	75	45
Motor vehicles: New registration by centres	76	45
Road transport equipment: Retained imports, 1950-1955	77	46
Road transport equipment: Retained imports—value, 1950-1955	78	46
Motor cars: Net imports by country of origin, 1951-1955	79	46
Buses, trucks, lorries and other motor vehicles: Net imports by country of origin, 1951-1955	80	47
Traffic accidents, 1949-1955	81	47
East African Posts and Telecommunications Administration		
Post Office Revenue and Expenditure (East Africa)	82	48
Articles handled by post offices: Kenya	83	48
Telephone and International telegraph services: Traffic handled—Kenya	84	48
Money orders issued: East Africa	85	49
Money orders paid: East Africa	86	49
AGRICULTURE		
Non-African farms, 1954: Type of farm	87	51
Non-African farms, 1954: Size of holdings	88	51
Non-African farms, 1954: Acreages of principal crops	89	51
Non-African farms: Production of crops	90	52
Non-African farms: Livestock	91	52
Meat Production	92	53
Dairy Produce	93	53
Price to producer for crops	94	54

	TABLE NO.	PAGE
AGRICULTURE—(Contd.)		
Price to producer for first or A grade meat	95	54
Exports of agricultural produce (mainly non-African)	96	55
Exports of livestock produce	97	55
Main agricultural product of trade with Uganda	98 (a)	56
Main agricultural product of trade with Tanganyika	98 (b)	56
Exports of agricultural produce (mainly or partly African produce)	99	56
Non-African farms, 1954: Estimated capital expenditure	100	57
Non-African farms, 1954: Agricultural machinery	101	57
FORESTRY		
Annual production of timber and value of exports	102	58
MINING		
Mineral production: Quantity	103(a)	59
Mineral production: Value	103(b)	60
FUEL AND POWER		
Electricity: Installed capacity of generating systems	104	61
Electricity: Production and imports	105	61
Electricity: Sales	106	62
Output of wood for fuel	107	62
Sales of motor spirit	108	63
Power equipment: Retained imports—Quantity and value	109	63
INDUSTRY AND COMMERCE		
Companies Registered	110	65
Business Names Registered	111	65
Bankruptcies	112	66
Manufactures and repairs: Number of employers, 1955	113	66
Size distribution of firms: Industrial and commercial, 1955	114	67
Excisable commodities: Local production and imports	115	67
Value of new building completed for private ownership: In main towns	116	68
New buildings completed for private ownership: In main towns	117	68
New buildings completed for private ownership: Analysis by town, 1955	118	69
New buildings completed for local Government ownership	119	69
City Council of Nairobi: Private building plans approved	120	70
Public Works Department: Expenditure on building	121	70
East African Railways and Harbours Administration: Buildings completed in Kenya	122	71
Cement: Supply and consumption	123	71
Building materials: Quantity of retained imports	124(a)	72
Building materials: Value of retained imports	124 (b)	72
BANKING AND CURRENCY		
East African Currency Board		
Currency in circulation	125	74
Issue of currency of various denominations	126	74
Monthly note circulation	127	75
Transfers of currency within the East African currency area	128	75
Statement of securities held on 30th June, 1955	129	76
Banking		
Kenya Savings Bank	130	76
Kenya Land Bank	131	77
Commercial banks: Liabilities and assets	132	77
Commercial banks: Balance sheet	133	78
Commercial banks: Debits to current account	134	78

NOTICE

Though every care is taken in compilation, no responsibility can be assumed by the East African Statistical Department for the complete accuracy of all statistics contained in this Abstract.

Throughout the tables the following signs have been used:—"—" means NIL.

" . . " means figures not available.

" () " means estimated.

FOREWORD

It gives me great pleasure to be able to write this Foreword to the first issue of the Kenya Statistical Abstract.

Kenya cannot have too much economic and statistical information available for study by those who are interested in its growth and its future. If the development of the country in both the public and private sectors is to be guided correctly, that knowledge is needed, and by means of such publications as this the basic information will be made available to those who wish to seek it. It is not on general opinions but on quantitative knowledge, accurately assessed, that we should base our economic plans.

The Kenya Statistical Abstract will be a companion volume to the East African Quarterly Economic and Statistical Bulletin which will now change its function and attempt to deal more with current series, omitting wherever possible the annual series which will be contained in Abstracts of the various territories. I know that the Department hopes that in the years to come the information contained in this publication will improve in coverage, and will include many of those series which are at present lacking, and which are so important for our general economic and political knowledge. This Abstract will be an annual publication and I hope it will be made available as soon as possible after the close of the year to which it refers, in order that the statistical information will be as current as possible.

I wish to express my gratitude to all those business houses, farmers, and other people who have helped the East African Statistical Department by providing information, and I do hope that in the future, as the Department asks for more and more, they will be as willing to provide it. This information is required for government policy and for government purposes, and I can assure you that it would not be requested if it was not vital.

I commend this publication to all those who are interested in the economic and social life of Kenya, and I hope that those who wish to speak authoritatively on the subject will study the pages of the Abstract.

E. A. VASEY,
Minister for Finance and Development.

INTRODUCTION

The purpose of this Statistical Abstract, which will be published annually, is to assemble such series as are considered of value for the proper appreciation of economic and social policy concerning Kenya. It is possible to obtain from many sources statistical series of one sort and another, but it is a weakness that no one document provides, in a satisfactory form, the main series concerning the general activities of the Colony.

The East African Quarterly Economic and Statistical Bulletin, which has been published now for over eight years, is an attempt to collate series which are not of an annual nature. But owing to the absence of any other publication, the Bulletin does, in fact, contain many annual series and many basic statistics, such as population data, which change at infrequent intervals. It is intended that with the development of the Annual Statistical Abstract some of the series in the Quarterly Bulletin will be omitted and more current series will be included.

It was also thought that, in addition to the bleak tables of statistical material, it would be useful for those interested in studying the development of Kenya to have a number of charts which would demonstrate to the reader what had been happening in the Kenya economy.

It was further decided that a brief commentary on the growth of the economy might be useful to certain readers and this has been included as text. In the main it covers more than the last few years, and gives certain background information for the benefit of those in overseas territories who have little knowledge of Kenya. To bring into prominence the activities of 1955, permission has been given by the Minister of Finance and Development to reproduce the section of his budget speech of 26th April, 1956, which gave an economic survey of the Colony.

The compilation of the Statistical Abstract has been undertaken by the staff of the Kenya and East African Units of the Department. I wish to thank departments of Government, the commercial and industrial communities and all private individuals for their help in providing information for this publication, and the Government Printer for his patience in printing the Abstract.

Office of the Statistical Adviser,
East African Statistical Department.
November, 1956.

C. J. MARTIN,
Director.

**EXTRACT FROM THE BUDGET SPEECH OF THE MINISTER FOR FINANCE AND DEVELOPMENT,
THE HON. Mr. E. A. VASEY, C.M.G., PRESENTED TO LEGISLATIVE COUNCIL ON 26th APRIL, 1956**

1. It has been my custom at the time of the Budget statement to give the Council a review of economic conditions during the past year, using it as a guide to the possible changes and trials which may face the Colony in the future. From time to time I have in these speeches declared my belief in the future economy of Kenya and stated that I am convinced that, once the Emergency has been concluded successfully and the problems connected with it moved towards solution, the economy of Kenya will evolve at a speed which may surprise many people.

2 There are some who have challenged this view and protested that many of the economic and statistical data which have been presented for consideration do not deal with real achievement. I hope later in this speech to prove, by means of yet more examples, the fallaciousness of these arguments. It is encouraging to find that an independent body of experts have confirmed the views of myself and of my advisers on the future of Kenya. The Economist Intelligence Unit which was commissioned by the East African Railways and Harbours Administration to carry out a survey to establish the likely trends in trade and industry in British East Africa, with special reference to the future programming of the transport industry, assessed the economic growth potential of Kenya to be extremely soundly based. These experts realized, as most of us do, that Kenya is an agricultural country and they calculated that it will be from agriculture that we can expect to achieve our greatest increase in exports, while it will be from our industry that we can hope to reduce our overseas expenditure on imports.

3 To all those interested in the possible development of our economy, I would recommend a perusal of the report of the Economist Intelligence Unit and, in recommending this, would say that I am encouraged that those of us who are studying these current problems and trying to chart the future, have had our bench marks and our own forecasts confirmed.

4 The most simple and all-embracing assessment of the economic progress of any country is to be found in those social accounts which are aggregated to form the national income. In Kenya we are fortunate in having available a series of geographical income estimates which start in 1947. For to-day, I have been able to obtain the first preliminary estimate of our geographical income for the year 1955. One must realize that such an estimate is of a very approximate nature, for 1955 is but four months past and we cannot expect to be as current in our knowledge as in more developed countries. There are some who presume that it is mainly price changes which have formed the basis of our economic growth. There is no known way of converting tons of wheat and soda and adding them to the real value of services from hotels and tourism except in money terms. This method of using money terms is in force in calculating our geographical income, but to satisfy the wishes of all of us, I have arranged for these income statistics to be deflated by the best price index available, which is the cost of living index for Nairobi. I have taken only the cash section of the geographical income into account in the calculation. The results are most interesting. Based on 1948, with an index of 100, the index of the geographical income in 1954, deflated for price change, was 60 per cent above the 1948 level and our first estimate for 1955 is over 85 per cent higher than the base year. We, therefore, increased our income, after allowing for price movements, at least 85 per cent over the last seven years.

5 But, in the presentation of these figures, there is much more of value than merely a comparison with eight years ago. The increase between 1954 and 1955 has been 15 per cent, the estimate being made at constant 1948 prices. For comparison, I give the changes from 1950 to 1951, the years before the Emergency, and 1952 to 1953. Between 1950 and 1951, the increase at constant prices was 17 per cent, while between 1952 and 1953, it was a fall of 3 per cent.

6 It seems, therefore, that the trend of economic progress is again upwards following the pattern of the pre-Emergency period and we seem to have taken another step towards our goal of an increased national income through diversified industries and increased output, with the prize of success being a higher standard of living.

7 To ensure that all possible advantages are eliminated from the statistics I have presented, I have had this information re-assessed to allow for the increases in population which occur annually. Taking into account these population changes, the cash output per capita has increased in real terms from £8 in 1948 to about £13 1/2 in 1955, so that we can say that on the average the real geographical income per head has increased by over two-thirds in cash terms from 1948 to 1955.

8 The preliminary estimate for 1955 is calculated to be £150,000,000, an increase of over £23,000,000 compared with 1954. This is a considerable increase and in percentage form represents about 19 per cent or the equivalent of the average expansion from 1948 to 1951.

9 In agriculture, in spite of a fall in income from cereals, there has been an overall expansion of some £7,000,000 or a 13 per cent rise. Most of this has come about from an expansion in the coffee sales. I am giving a more detailed statement on agricultural production in volume terms and I shall, therefore, not give other than national income figures at the moment. The African cash income from agricultural sales, including livestock, has gone up by about £0.3 million, in spite of the reduction in incomes from the sale of maize. There was an expansion in coffee sales, in African cattle for slaughter, as well as an increased income from wattle.

10 The return to commerce in national income terms has increased by about 17 per cent, much of it being from changes in wages and salaries. There have been increased imports into the Colony and the year 1955 was a good year for many of the business houses. Our manufacturing industry has continued to grow, and later I will give details in terms of manpower and materials which shows the extent of this expansion in what may be called real terms. In value terms the accretion to the manufacturing industry is estimated to have been in the order of £3-4 million and the total contribution to the geographical income is thought to amount to £19.4 million. This means that as a proportion of the total geographical income the manufacturing industries represent some 13 per cent: in 1949 the proportion was less than 10 per cent and in 1952 it was only 10.8 per cent. There has been a steady expansion ever since 1947 and we look to the manufacturing industries to grow in size in the years to come.

11 The Government sector has shown a considerable expansion partly as a result of the increased numbers employed. I said last year that my advisers did not consider that the back payments which were provided to civil servants as a result of the acceptance of the recommendations of the Lidbury Report should enter into the geographical income for 1954. This amount was left out of the figures, although it was my opinion that there had been some anticipation of this increase and that the expectancy had entered into consumption expenditure. We have, therefore, had to include in the present geographical income figures the arrears of salary granted to members of the public service. In 1955 the Government account as a proportion of the geographical income represented 13 per cent or a total of £20 0 million.

12 The building and construction industry had a very satisfactory year with increases, both in the number of employees and work done. It is only a little while ago that we were lamenting the fall in the activities of the building industry, but the building and construction trades are now stretched almost to, if not beyond, capacity.

13 It is also my custom to give an indication of the advantages which came to the recipients of the incomes arising from these agricultural, industrial and commercial activities. In 1954 wages and salaries totalled £49.9 million or nearly 40 per cent of the geographical income. In 1955 the total was £64.0 million and the relative importance had risen to 42 per cent of the geographical income. Overall profits and surpluses rose in absolute terms by some £9.0 million. I will repeat what I have said earlier that in real terms, allowing both for changes in prices and for increases in the population, the geographical income of Kenya had risen by about 15 per cent during the year 1955. This is indeed a satisfactory expansion and cannot be considered to be purely the result of inflationary trends.

14 Agriculture is one sector of the economy which we can express in volume as well as value terms. It is possible to compare changes from year to year in terms of tons or bags of produce. The wheat production for the crop year 1955/56 was unfortunately poor. We have had serious and adverse effects on our wheat production because of weather conditions in the past, but this year the extent has been greater than for some time. As a result of the increase in acreage, it was expected that the total production of wheat would be greater than in the 1954/55 crop year, when it amounted to over 132,000 tons. The final out-turn of the present crop, it is believed will be much smaller. The shortfall, compared with last year, may be in the region of 25,000 tons and, if that is so, we shall have to import during the coming year a quantity of wheat to meet the demands of the population. These demands are, of course, increasing as the standard of living of the majority of our population improves. This is the type of problem which constantly faces agriculture and, in spite of every care and attention, weather factors will still have their outstanding effect and seriously influence and jeopardize the plans and activities of any farming community. The maize production is also likely to be lower than in the past year and total production is believed to amount to about 113,500 tons, compared with 142,000 tons in the previous crop year.

15 Our sisal production has been of roughly the same order as in 1954, there being a 2,700-ton increase which, though small, is welcome. Pyrethrum production, although not impressive in terms of tonnage, is of considerable value to us as an export crop, and the production is estimated to have increased from 2,100 tons in 1954 to 2,700 in 1955. The production of tea has shown a steady expansion over the last few years, and with improved prices, total value of output is now about 100 per cent higher than in 1951. Our volume of production is estimated to have been 8,500 tons in 1955, an increase of 9 per cent over the previous year.

16 But it is coffee, the description of which I have left until the last, which has been the most outstanding of all our agricultural products in 1955. The production this year has been the highest on record. It has topped the 23,500-ton mark and the nearest production in the past was 18,500 tons in 1941 and 18,000 tons in 1935. Out of this total, the African production amounted to 800 tons; small but increasing and encouraging to all who hope to see an expansion of the cash output of the African farmer.

17 In agriculture it has been coffee which has given us that boost which we have so much needed. The coffee market throughout the world is, unfortunately, at present in a very unstable state. There are many producers of coffee in the world, and Kenya, although important in some ways, has little influence on the total volume of production. It is the decisions of other Governments which are affecting the activities of the world coffee trade and, since these cannot be forecast with any certainty, the business men are keeping their stocks small. When one runs down stocks, immediate demands hand over the initiative to the seller who can raise the current price and gain from the availability of supplies, compared with the urgency of demand. Kenya has gained in this way from the early picking of her crop and the availability of supplies, but it is a difficult and dangerous task to try to forecast what is in store during the next year. The highest price which Kenya received for her coffee was paid in the early months of 1954 when the average price for coffee rose to over £700 per ton. During the auctions last year the export price was running at about £460. We have reason to believe, on the best evidence which is available to us, that prices will be lower during the coming year and that we shall not receive as good a return per ton as we did in 1954 or 1955. We are also told that we can hardly expect such a bumper crop two years running. It is likely then that production will be lower which means with lower prices we shall, of necessity, receive a much smaller return.

18 I have dealt with cereal production and also with the plantation crops, but what of our dairy industry which has been expanding and which, according to the Troup Committee on the best estimates available, will expand by some 70 per cent by the year 1961. During 1955 the production of wholemilk increased by 12 per cent; these figures are based on the sales to the Kenya Co-operative Creameries during the last year. Butterfat delivered to the Kenya Co-operative Creameries increased by about 11 per cent and butter manufactured increased by roughly the same amount. The dairy industry is an industry which has developed quickly and whose products are required for the well-being of the population.

19 Meat production in European areas has not expanded during 1955 compared with 1954, the total of slaughter cattle from European farmers delivered to the Kenya Meat Commission was almost unchanged. We must, of course remember the effect of the Emergency in some areas. There was also a fall away in the production by the pig industry in 1955 the number of baconers handled declined from some 39,000 to 31,000 while pigs of other types remained roughly the same in total number.

20 What of the cash crop production in African areas? We realize that many of the problems of agriculture in the African areas are connected with subsistence activities of the individual farmer to maintain his family with the basic foodstuffs of life from his own plot of land. But, in addition, there has been production of crops for sale, excluding livestock, amounting to £5.0 million during the year, compared with £5.3 million in 1954. There has been a fall in the sale of maize, particularly in the Nyanza area, for the same reasons as in the European areas. It is expected that the 1955/56 cotton crop will not be more than about 16,000 bales, which will be 20 per cent greater than in the previous season, but still below the 1952 and 1954 pickings. Wattle production has continued to increase and to bring in a higher return to the African producer.

21 The figures I have given of agricultural production have covered the whole of the Colony, but within the Colony the changes have not been uniform, it is not easy to make a quantitative appreciation of the total economic effects of the Emergency in the troubled areas.

22 There has been the effect on those European farmers in the troubled areas who, in lonely places, have had to guard their homesteads and tried to maintain their incomes, in spite of the activities of marauding gangs. Some farmers have had to leave their homesteads because of the dangers and the inability of the defence forces to protect them in their outlying farms or homes. As a result of the concentration of labour, the denial of food crops and the close herding of livestock, there has been a reduction in output in various areas. The Troup Commission on the dairy industry has shown that milk production in the areas affected by the Emergency fell slightly between 1952 and 1955, but the total production rose by 11 per cent as a result of a rise in output of 70 per cent in West Kenya. Without the Emergency dairy producers in the troubled areas may have been able to increase production at a similar rate and to have increased their incomes.

23 The Kikuyu, Embu and Meru tribes in the Central Province have suffered economically as a result of the Emergency. A rough calculation from such figures of cash crop sales as are available shows that whilst in the Gyanja Province there has been a large increase in the value of sales of maize, millets and ghee, the expansion in the Central Province has been very small between 1952 and 1954, whilst in 1953 there was a drop which was not experienced in Nyanza. It would seem that maize was required internally in the Central Province and was not available for sale and in the case of such crops as vegetables there was a considerable decline. This effect of the Emergency was, in part, a decline in production, but mostly a failure to expand at the rate we wished. In the troubled areas the rate was lower than in other parts of the Colony.

24 I wish now to describe the major changes which took place in our external trade during 1955. Both our imports and exports are vital to our well-being and are more important to our economy than possibly in many developed countries. As a ratio of the geographical income, the total value of our external trade was some 66 per cent, a high ratio, but not one out of line with that found in countries at a similar stage of growth.

25 The value of our exports shows an encouraging increase during 1955, the total of domestic produce which we sent overseas being £25.7 million, an expansion of £5.4 million over 1954. This increase was mainly due to the large coffee crop, which resulted in exports valued at £8.9 million. It is encouraging to note also that by the end of the year not all the coffee of the 1955/56 crop had been exported through Mombasa and, therefore, we should expect a good value figure from coffee to be returned in our export list in 1956. In value terms, coffee represented 35 per cent of our total domestic exports, leaving well behind those other agricultural products which enter into our export trade. Second in order of importance was tea, which now represents nearly 11 per cent of domestic exports. In 1954, tea rose to second place and, in 1955, it maintained its standing. Fourth in the list is sisal, the price of which for Grade 1 continued to fluctuate around £80 per ton. It is a pity that these 33,500 tons of sisal brought in only £2 million, but sisal represents 7.6 per cent of the total value of our exports and is an important industry. Some six export items are always jockeying for position in the export race, and each year they change places. In 1954, wattle bark and extract together were fourth, hides and skins fifth, sodium carbonate sixth, maize seventh, and pyrethrum eighth. Last year, wattle had moved to third place, ousting sisal, with 9.8 per cent, followed by sisal and then by maize, hides and skins, sodium carbonate and pyrethrum. Although these eight items represent 84.3 per cent of our total exports, we have others too. We have 38 main groups of exports and over fourteen which represent individually more than 1 per cent of total exports in 1955 or more than £250,000 each.

26 The average unit price of our exports fell during 1955. Taking the average of all the prices of agricultural produce, the index for 1955 stood at 113, compared with a base of 100 in 1950. In 1951 the comparable figure was 133, while in 1954 it was 115. We are, therefore, getting less money for a unit of exports than we did in the past, and we can only maintain or increase our total value of exports by increasing the volume, should the present trend continue. This, we have done in 1955, particularly from our coffee production. Compared with the volume index of 102 in 1954, the index stood at 131 in 1955, 1950 being taken as the yardstick.

27 Our imports continued to rise in volume and total value. Retained imports were valued at £69.2 million. I have heard a great deal from certain people in Kenya, whose criticisms are, I feel, sometimes based on political grounds rather than objective economic analysis, that the adverse balance of trade is enormous and demonstrates that Kenya is living on credit and not supporting itself. We have heard strong remarks from those whose classification could, at the best, be termed neutral. I said last year:—

28 "It is necessary to emphasize the statistical inadequacy of the information and express my belief that until we have firm figures of balance of payments statistics, we should not gaze too deeply into the balance of trade figures of individual territories, but keep in mind that it is the East African balances which are of primary importance."

The port of Mombasa is the major port of East Africa, dealing with some 70 per cent of the total volume of trade which enters East Africa. Many of these goods, which flow through the port, enter into Kenya and are used here for interterritorial purposes and on occasions are sent to other territories without alteration in the trade statistics. An examination of the trade report for 1955, an admirable document produced with great efficiency and rapidity by the East African Commissioner of Customs and Excise, gives some illuminating examples. A study of the importation of transport equipment for Railways and Harbours shows that only some £20,000 has been allocated to Uganda as comprising this equipment, and over £7 million to Kenya.

29 Now, I am making no criticism, actual or implied, either of the East African Commissioner of Customs or of the General Manager of the Railways Administration, when I bring this example to the notice of the Council. The Railways and Harbours Administration is East African and its central workshop and stores are in Kenya. It would be a headache indeed, and a lot of unnecessary work and waste of time to decide what items of rolling stock and what locomotives should be allocated to the Kenya or Uganda accounts, as these locomotives pull their loads over the stretch of track from Mombasa to Kampala. I would not wish for anyone to change the classification, and it would be of no advantage to Uganda, since these imports are on Government account and come in duty free. I am quite happy to have these imports allocated to Kenya, but I would ask that others understand that the total of Kenya's imports include many items which are of use to other territories and are even used in other territories. The removal of these figures, and others which I shall give later, from the total of our imports would reduce not only our import totals, but also improve considerably the trade balance.

30 There are many other examples which a study of the trade accounts, coupled with general economic knowledge, bring to light. I will not trouble honourable Members with many of these, but we should remember that a number of our schools, buildings of interterritorial organizations, and other things are paid for, at least in part, by other than Kenya residents. I am informed that at least 70 per cent of the aviation spirit which enters into the Kenya import list is used for refuelling aircraft of international air lines and, if a balance of payments was struck between the various territories, I do not think Kenya would come out too badly.

31 We must not forget that Nairobi is a centre of trade and tourism for the whole of East Africa. Last year there were nearly 40,000 persons who came as visitors and persons in transit. Many of these people came to Nairobi, not only to buy local produce but imported goods. In addition to these numbers who came from overseas, there were visitors from neighbouring territories who travel to shop in Nairobi. We all know of friends in those territories who regard, with a certain amount of trepidation, the visits of their wives to the capital of Kenya because of the effect on their bank account. When these ladies return, laden with their private purchases, they do not fill in any forms, nor does the shopkeeper ask for the destination of the goods. These imported items form an export trade and earn money, reducing still further our adverse balance of trade. I hope I have, by means of this simple exposition, enlightened those who desire to give comment, and I suggest that there are some who should study the economic problems a little more deeply, for there is more to the study of external trade and the balance of payments than simple arithmetic.

32 A developing country should not be ashamed of an excess of imports over exports. It is only by these means that its economy can get the stimulus for rapid growth. If, in the past, the United States of America and the great Dominions of the Commonwealth had not maintained large adverse balances with the United Kingdom, they would never have grown into important economic units in world trade. Last year I stated that:—

"Kenya is importing more than she exports, and someone else is paying for those imports. We pay partly for the excess by means of our invisible exports, but these do not finance the whole difference. The remainder is made up of capital inflow, an inflow which has been maintained since the beginning of the post-war period. In part, it is an inflow of capital as a result of moneys raised on the London market. Some of our imports are at present being financed by Her Majesty's Government from the grants and loans which have been made to us, while capital equipment is being imported by firms and organizations with headquarters overseas, part of whose investments take this form."

33 If no one from overseas was prepared to invest in this Colony, our imports would fall quickly to somewhere around the value of our exports. An examination of pre-1939 trends proves that a fall in exports was quickly followed by a decline in imports, for unfortunately in those days very little capital flowed into Kenya. We have managed to persuade the overseas investor, either by the purchase of equipment or by the employment of local inhabitants, to help in developing this Colony.

34 Of the total value of retained imports in 1955, it is estimated that 28 per cent could be classified as producers' capital goods. This is not a very enlightening title perhaps, but it includes, among other things, all the machinery for industry and for basic services, tractors for agriculture, rolling stock for railways, cables and telephone equipment for telecommunications and electric generators for power. About half of these imports were on behalf of public authorities, and about a third were purchased for private industrial concerns. About a third of the total of all retained imports was in the form of producer materials, which includes feeding stuffs, oils and petrol, as well as the multifarious items which go to form the materials for industrial production. It can be said, as a result of these analyses, that some two-thirds of our imports have very little to do with direct consumer demand.

35 £13.7 million, or 20 per cent, is estimated to have represented consumer goods. If anything, this total is an over-statement, since included in the aggregate are all private motor-cars, wireless sets, refrigerators and metal furniture and fixtures. It is impossible from the returns to allocate some of these items between hotels and private residences, or to discover whether the saloon cars were imported for business or for pleasure. The benefit of the doubt has been given to the consumer, in order that no extravagant claims are made about imports of capital goods. We can, therefore, be confident that the income earned by our domestic exports and by our invisible exports is not being spent on luxury goods. I said last year that:—

"In dealing with the items imported for direct consumption, we must remember that there are over 6,000,000 people in the Colony whose individual demands, in other needs as well as in food, have to be met and, at present met largely through imports. Cotton piece-goods of all sorts still represent the highest percentage of all consumer goods and are equivalent to some Sh. 12 per head of the African population."

36 The cotton piece-goods, the bicycles and the small wireless sets for the African farmer or urban employee are essential incentives. We cannot expect increased output and higher wages without an increase in imports of consumer goods. A growth of less than £1 million between 1954 and 1955 is not phenomenal.

37 I would like to end this summary of trade by commenting on a number of import items, the change in which between 1954 and 1955 has been of the order of 100 per cent. We had a considerable reduction in our importation of food, mainly due to a reduction in the importation of sugar by 85 per cent from £1,650,000 to £900,000 and in rice, which fell by 300 per cent from £800,000 to £200,000. There was a considerable increase in the importation of manufactured fertilizers, which increased by nearly 140 per cent or by some £500,000. Importation of copper producer materials rose by some £140,000 or by over 300 per cent, while agricultural machinery and implements were valued at 107 per cent higher than in 1954. Metal working machinery was 120 per cent higher in value terms, while the importation of bicycles was 100 per cent in number and value.

38 I hope, by now, I have reassured the Council that Kenya is not on the slippery slope to bankruptcy, as some people seem to wish to make the world believe. I reiterate, however, that we must do our best to increase by every possible means the volume and value of our exports, taking the initiative by venturing into new fields and discovering new markets. The latter will require the use of salesmanship, marketing and market research, but we are surrounded by many countries whose agricultural potentials are not as great as that of Kenya. Their populations are growing, their incomes are rising and, if production can be developed, I believe there are markets to absorb the produce.

39 As I have said, a developing country such as Kenya depends, in part, on its capital formation for its economic progress. There is, in some quarters, a theory that the population of a country can improve its conditions entirely by its own efforts. Where a population has such a low standard of living that savings are rarely possible, it is to outside capital resources that the Government has to turn, if it wishes to plan expansion. Kenya has been very fortunate since 1946 in finding many industrialists and organizations from the United Kingdom wishing to invest money. I speak now of the private investor who has brought in either money or machinery for use in this Colony, for many of our imports are really importations of capital.

40 Last year, in 1955, our imports of capital equipment totalled £19.6 million against £13.8 million in 1954. These figures are valued c.i.f. and an extra allowance must be made for installation and other charges. During 1955, it is estimated that construction added to the value of capital formation of the order of £12,000,000. Included in the total are the costs of water supplies, electric power schemes, dock and railway development and many other works.

41 It is most difficult for interterritorial services to provide detailed estimates for one territory and almost impossible to say how a division should be made. The best estimate we have been able to make and, if anything, it is on the conservative side, is that the grand total, for all schemes private and public, during the year amounted to about £38,000,000. This is equivalent to 25 per cent of the geographical income. In providing this estimate, I have eliminated completely rolling stock, etc., which must be considered entirely interterritorial.

42 I would like to illustrate my point by mentioning some of the development programmes which have been progressing since the beginning of the Emergency. We have had large East African Power and Lighting Company and Kenya Power Company development programmes which, from 1952 to 1957, are estimated to total nearly £16,000,000. The City Council of Nairobi's capital development programme, from 1952 to 1957, includes £3,250,000 for water development, so essential to the City. The programme of the East African Railways and Harbours Administration for the whole of East Africa, from 1954 to 1957, is placed at some £41,000,000 and a considerable proportion of the construction will take place in Kenya, since Mombasa is such an important port for the whole of East Africa. The Posts and Telecommunications Administration will be spending nearly £9,000,000, from 1954 to 1958, on capital projects. The other municipalities have also increased their capital expenditure, while the Government expenditure itself, for the planning period 1954 to 1957, is estimated to be running at over £6,200,000 per annum for the 3 1/2 years, or nearly £21,800,000 in total for the period. This accounting of development is not intended to be comprehensive.

43 There are some who say that we are trying to do too much all at once, with the result that we are causing an inflationary spiral in the Colony. We are straining the resources of the Colony too far, with the result that, in some cases, we are merely getting higher prices and less production. There is, of course, in a developing country, some truth in this remark and it is necessary to study, not only the desired capital expenditure and the amount of money which we can afford to borrow or persuade others to bring in, but also the actual amount of labour and material and the possible organization which exists to bring plans to fruition. This is a major problem in a developing territory and we, therefore, plan our own programmes, taking all these and other factors into consideration.

44 One of the problems facing most countries in the world at the present time is that of the inflationary spiral, with the value of money slowly depreciating as money is put into circulation at a more rapid rate than goods. The whole world is suffering from this inflationary spiral and Kenya, as a dependent territory, has been caught up, to some extent, in this dust-devil. It is not surprising, therefore, that the price level in this country has risen and, in an earlier debate on another subject, I stated:—

"What, therefore, I think must be the Government's policy is one of continuous watching, a flexibility, the willingness to step in if there appears to be in this country any great slide towards dangerous inflation. To recognize that a country, as small as we are, with an economy as buoyant as ours is to-day, must not be afraid of prosperity and that the Government, and the people, must be prepared to accept a small proportion of inflation as the price they pay for the rapid development which has characterized the progress of this country in the last few years."

45 I repeat that statement here to-day. In my last Budget speech, I made the remark that the increase from December, 1951, was nearly 11 per cent, while that between 1952 and 1953 was just over 3 per cent. I had previously stated that during last year the cost of living index had risen by about per cent. The increase in the cost of living index from December, 1954, to December, 1955, based on the prices current in Nairobi, was 6 per cent. In the first two months of 1956, there was another increase of 1 per cent. We, therefore, had a change of 7 per cent since December, 1954. This is a higher increase than has been experienced in Nairobi since 1952.

46 What have been the main changes which have taken place in this index from December, 1954, to December, 1955, and what has caused this upward movement of prices? Included in the cost of living index, which attempts to show the pattern of living of a lower range of European employee, there is a weighting of 13 per cent of the monthly budget for the wages of servants. Servants' wages have increased greatly during the last year, for reasons which I explained in my last Budget speech. The increase in this part of the index accounts for nearly two-fifths of the total increase of 6 per cent in the overall index. The food, drink and tobacco group has increased by 5 per cent in 1955, and the increase in the transport index was 8 per cent. Many of the other items have been fairly stable and there has been only one decline.

47 How are we progressing, compared with other parts of the world? I shall make comparisons between 1947 and the latest figures which are available to me. The Nairobi index rose by 57 per cent, while in the United Kingdom the interim retail price index rose by 54 per cent. In South Africa the increase was 46 per cent, in Northern Rhodesia, 37 per cent, and in Southern Rhodesia, 52 per cent. These indices are not strictly comparable, but are the best which are available to me for the making of comparisons. Over 1955 the Kenya index rose, as I said, by 6 per cent compared with a similar figure in the United Kingdom, a rise of 3 per cent in Southern Rhodesia and a rise of 2 per cent in South Africa.

48 I usually give at this time the change in value of our money compared with the changes in other countries. These estimates are only approximations, but the change does not seem to have been greatly different in Kenya, the United Kingdom and South Africa. If we take December, 1947 as the base of Sh. 20, by December, 1955, our currency had depreciated to about Sh. 12/50, while in South Africa the comparable figure was Sh. 13/50 and in Southern Rhodesia and the United Kingdom about Sh. 13. Over the past year, Kenya and the United Kingdom had lost roughly the same value, of the order of 80 cents, while in South Africa and Southern Rhodesia the fall is of the order of 40 cents. These estimates are based on the retail price indices, which I have quoted.

49 The East African Currency Board, at the 30th June, 1954, had currency in circulation in Kenya, Tanganyika, Uganda and Zanzibar of some £45.5 million. By June, 1955, the currency in circulation had risen to £53.7 million, an increase of £8.2 million. I said last year that since June, 1953, there had been an increase of almost 25 per cent in the currency in circulation in East Africa, and between 1954 and 1955 the increase has been 18 per cent. I would like to reiterate that this expansion can only come by the placing of the equivalent amount of money in the East African Currency Board in the United Kingdom, and to remind honourable Members that our currency here in East Africa must be backed 100 per cent by sterling. Honourable Members are always interested in the size of our sterling balances. Since East Africa is an economic unit and it is impossible to provide comprehensive estimates for individual territories, I give these for East Africa as a whole. Our current sterling balances fell from June, 1954, to June, 1955 from £205 million to £187 million. In these figures there is a pointer to the need to keep a careful watch in the future on our overseas position and not draw any more than is necessary on our overseas assets.

50

The effect of a credit squeeze in the United Kingdom must be felt here. I am assured that there is no directive overseas to the East African branches of the Banks to restrict lendings. However, the restrictions in the United Kingdom inevitably have their repercussions throughout the sterling area and the resulting pressure on the overseas Banks for advances brings into play the point beyond which they cannot go without exceeding their recognized ratio of liquidity. Banks can only lend a certain proportion of their depositors' money by way of agricultural, commercial and industrial advances. A proportion must be invested in short-dated and readily marketable Government securities and the balance, called the liquidity ratio, held in cash, money at call and Treasury Bills. As far as East Africa is concerned, the latest statistical returns show that the Banks were lending £56 million against total deposits of £90 million, which can be regarded as a high proportion and an indication that the Banks have been helpful in their general assistance towards development. We have not yet a large money market in East Africa or, indeed, a ready market for Government securities and Bills in very large amounts, so that proportion of the Bank's resources which must be kept liquid has to be invested in the United Kingdom. Money, therefore, flows between East Africa and London as the requirements of the Banks necessitate and there is broadly speaking, a seasonal movement. Provided, and I emphasize this, provided that the legitimate seasonal requirements of agriculture and industry can be met and provided that the policy is not so quickly and drastically imposed as to restrict sound development, tighter credit conditions can have a salutary effect. Greater attention will have to be paid to the collection of accounts and the reduction of stocks to reasonable levels, whilst competition instead of being in terms of the amount of credit will have to be based upon quality, price and service. I am confident that the Banks, conscious of their responsibilities in this matter, will not carry that policy to the point where, as I said, sound development will be unduly hampered.

51 In my Budget speech for 1954/55, I told honourable Members that, while we could regard agriculture as the life blood of the economy, it might well be from industry that we should find our best measure of rapid growth. Industrial production, as a percentage of our geographical income, has been constantly rising in importance since the series commenced. In 1947 it represented some 8 1/2 per cent and by 1955, this percentage had risen to about 13 per cent. The number employed in November, 1955, in manufactures and construction totalled over 80,000. Even this classification is not comprehensive, as many people employed in other industries, such as the Railways, are engaged in industrial production and maintenance. The list of our industries is becoming longer and our reliance on imports of manufactured goods of certain types will decline as output increases.

52 The East African Statistical Department has been undertaking, for the last eighteen months, an industrial census of some 1,600 firms throughout the Colony. These are of different sizes and importance and cover all types of industry including building and construction. The final figures for the first year are not yet to hand, but it has even surprised those, whose task it is to calculate our geographical income estimates, to find how many small firms exist whose total production is of significance. The consumption of electricity is a good indicator of industrial development. During the year, sales increased from over 160 million kilowatt hours to nearly 195 million and, of this latter figure, nearly 40 per cent is estimated to have been consumed by industrial concerns. A new and important industry is the production of cement and, from an infinitesimal production in 1945, our output has more than topped the 100,000-ton mark, being nearly 130,000 tons in 1955.

53 I have explained, in considerable detail, the development of agricultural production, both in the European and African areas. I have given some indication of what has happened to industry which is mainly centred in our urban areas.

Nairobi has been expanding. In 1955 the value of building plans which had been passed by the City Council was just over £8,000,000, compared with £4,500,000 in 1954. How was this grand total made up? Some 50 per cent represented domestic dwellings, flats and similar buildings, 23 per cent were commercial premises, 16 per cent were industrial buildings, factories, godowns, etc., and 11 per cent represented public and other buildings. This is a good cross section for the capital of Kenya and shows that the development is varied.

The development of Mombasa has gone forward at a considerable pace. It has developed a large water supply and water has been one limiting factor to their progress. This water supply has cost £5,000,000 and, although much of it has not been spent in the Municipality itself, the effects have been for the good of the town. Private buildings, completed in 1955, totalled £1,000,000 and some 70 per cent of these were residential. In addition, there were over £100,000 of development works carried on by the municipal authorities on behalf of the population of that area. New construction works at the port by the Railways and Harbours Administration and the construction of the cement works at Bamburi, all helped to increase the activities, prestige and prosperity of Mombasa.

The expansion of construction activities in Nakuru, the centre of the agricultural industry of Kenya, has been most encouraging. During the year the total of private buildings completed amounted to £400,000, compared with £211,000 in 1954. In addition, there have been large development plans carried out by the Municipality itself. The value of these during the year has amounted to some £300,000, while there are two or three large schemes which, from 1953 and planned to continue into 1956, amount to £600,000. Nakuru is progressing at a rapid rate and should develop in the future at a rate at least equal to that of other urban centres.

In the other municipalities of Kenya development has been continuous. One indicator of this is the building statistics of private buildings completed on behalf of firms and private individuals which totalled £340,000 in 1955.

INTRODUCTORY NOTES

LAND AND CLIMATE

The Colony and Protectorate of Kenya lies across the equator on the east coast of Africa. It is bordered by Ethiopia in the north, by the Sudan in the north-west, by Uganda in the west, and by Tanganyika in the south. It has a relatively long seaboard which is washed by the Indian Ocean.

The total area of Kenya is 225,000 square miles, including 5,000 square miles of water. It has, in fact, two water borders, since in addition to its littoral with the Indian Ocean, its boundaries between Tanganyika and Uganda run through Lake Victoria. There can be few countries of comparable size which contain such a variety of scenery, of climate, of people, and of types of economic and social development.

The seaboard of Kenya has a tropical climate and tropical vegetation. The coastal strip is narrow and inland the country rises sharply. Large plains of scrub and grass are found at a height of some 3,000 to 4,000 feet above sea level which are then followed by rolling uplands at altitudes of 5,000 to 8,000 feet, where the rainfall is sufficient to support plantation agriculture as well as mixed farming of both European and African types. There are, in addition, large areas of natural forests with streams fed from the slopes of some of the highest mountains in Africa. Through Kenya runs the unique Rift Valley, a natural fissure in the earth which stretches from Northern Syria, includes the Red Sea, and after running the length of Kenya, Tanganyika and Nyasaland finally reaches the coast in Portuguese East Africa. In Kenya the floor of the Rift Valley is at places up to 40 miles wide with walls rising several thousand feet to the surrounding hills and plateaux. In the north of Kenya is a huge desert which borders on Somalia and Ethiopia. This vast area of sand and waste stretches for 100,000 square miles, or nearly 50 per cent of the total area of the Colony and Protectorate of Kenya.

Kenya shares with her neighbours, Uganda and Tanganyika, Lake Victoria, the most largest inland lake in the world with an area of some 23,000 square miles. The lake lies at an altitude of about 3,800 feet and on it are numerous islands, some of which are scantily populated. Round the shores the land is densely populated.

The climate of Kenya is as varied as its physical structure. Rainfall and climate depend to a large extent on the height above sea level, the distance from large areas of water, and also on the distance from mountains. In spite of its equatorial position, the climatic conditions range from the dry heat of the deserts to perpetual snow on the mountain tops. Kenya's position within the tropics ensures that seasonal variations in climate are limited. In certain parts of Kenya there is a wider divergence between the day and night temperatures than between summer and winter temperatures. Most parts of Kenya enjoy two rainy seasons, one of relatively long duration and the other short. It is, however, impossible to generalise about Kenya's climate.

By studying the meteorological tables in this Abstract it is possible to obtain a picture of the types of climate found in the main towns of Kenya. But it must be remembered that towns cover only a small part of the total range of climatic conditions. In Kenya there are now 900 units reporting rainfall daily to the East African Meteorological Department, 14 full-time weather stations reporting all major aspects of weather changes, and seven part-time weather stations reporting twice daily. Weather information from Kenya is co-ordinated with similar information from the neighbouring territories and reports are broadcast at regular intervals.

The vegetation and animal life of Kenya reflect the variety of its topography and climate. At the coast are found tropical plants, and in the reefs along the coast many kinds of tropical fish. A journey from the main port of Mombasa to the capital city of Nairobi takes one through the hugh Tsavo National Park which covers 8,000 square miles and is a reserve for all kinds of wild animals from elephant and rhinoceros to giraffe, wildebeeste and zebra and down to the smallest of the deer and rodents. Plants, trees and birds are found in greater variety on the better watered foothills of the mountains than on the plains.

The total land mass of Kenya amounts to 225,000 square miles. Of this, 52,000 square miles are reserved for African occupation while alienated land, including townships and land held by or available for non-Africans, accounts for 14,000 square miles. More than half the total land area of Kenya consists of unsurveyed Crown land, mainly desert or semi-desert in the Northern Frontier District. In addition, 5,000 square miles are forest areas and 120,000 square miles are considered to be of little use economically.

THE GOVERNMENT AND THE CONSTITUTION

The recorded history of Kenya dates from very recent times. Although the coast was visited by the Portuguese as early as the fifteenth century, the hinterland was not penetrated, except by a few explorers and missionaries, until the end of the nineteenth century when the history of Kenya can really be said to begin. In 1888 a Royal Charter was granted to the Imperial British East Africa Company which thereupon took control of a wide area of what is now Kenya and Uganda with the purpose of developing the country commercially and abolishing the slave trade. Seven years later the Company was taken over by the British Government.

The first task in the opening up of the country and the abolition of the slave trade, was the building of a railway. At that time Uganda was the centre of interest and the area through which the railway passed on its way to Lake Victoria was considered of little economic value. The railway was financed by the British Government and, starting from Mombasa in 1895, it reached Kisumu just six years later. The development of government and the rise of Nairobi as the centre of government have been described adequately in many books. It must be remembered that before 1920, when the East Africa Protectorate became the Colony of Kenya, the boundaries of the East Africa Protectorate and of Uganda were very different from those existing today.

The period from 1900 saw the formation of the first towns, settlements, the first European farms and missions, and the growth of an administration which had to contend with many problems.

Throughout the whole period political control has remained with the British Crown through Parliament and the Colonial Office. But within this framework there has been gradual constitutional development, culminating in the Lyttelton Constitution of 1954, which introduced a multi-racial system of Government, with ministers drawn from all races and an official rather than an elected majority.

In the present Legislative Council there are 14 ministers, consisting of eight official, three European elected, two Asian elected, and one African nominated. The Legislative Council consists of 40 members of whom six are official, 18 nominated and 16 elected.

Local Government in the City of Nairobi and other municipalities and townships has been established for many years, but the last five years have seen notable advances in the formation and development of African District Councils and also in local county councils.

In 1948, the East Africa High Commission was formed to replace the East African Governors' Conference which first met in 1926. The East Africa High Commission consists of the Governors of Kenya, Uganda and Tanganyika and controls more than 20 departments which provide services common to the three territories. These services include the East African Railways and Harbours Administration, the East African Posts and Telecommunications Administration, both of which are self-financing, the East African Customs and Excise Department, the East African Income Tax Department, and a number of scientific, economic and advisory departments such as the East African Statistical Department, and the East African Agricultural and Forestry Research Organization. The method of financing these so-called "non-self-contained" services depends on the purpose of the department, but in all cases contributions are received from each of the East African Governments. The services of the High Commission are controlled by four principal executive officers responsible to a Central Legislative Assembly consisting of representatives from each territory together with a limited number of ex officio members.

POPULATION AND MIGRATION

The study of the growth of the African population presents considerable difficulties because of the lack of basic statistical knowledge, the absence of registration of vital occurrences and the recent elimination of major plagues and famines.

The seaboard of Kenya has long had settlements of traders from Asia, mainly from Arabia and Persia. The east coast of Africa was known for centuries before the birth of Christ and Arab sailors have long used its harbours. The Arabs predominate at the coast to this very day, while there were Indians in the East African territories prior to the arrival of British Government. But in the last 30 years migration from Asia, mainly India, has produced an Indian and Goan population which is now nearly five times the size of the Arab population and nearly three times the size of the European community.

It is usually said that the influx of the Asian population came with the building of the Uganda Railway. There were a number of Indians in Kenya before that time but a great increase came with the importation of labour for the railway administration. It is estimated that in 1946 the Indian and Goan population was 88,000 rising to 100,000 by 1948 and it is estimated that in 1955 the population was 144,000. This is a 63 per cent increase over the last nine years. A considerable proportion of this increase has been due to immigration and the rest to the natural development of the population which has a relatively high birth rate and a low death rate. The majority of the Indian population live in towns and other urban centres and are engaged in trade and commerce.

The European community has developed along two lines. The original settlers came out as pioneers to develop the Highlands, while others were recruited to form the administration and other services of Government and of commerce. Over one-third of the European population of Kenya now lives in the City of Nairobi, and there are nearly 3,000 European farmers and their families engaged in farming the Highlands. The resident European population in earlier years consisted mainly of adult males and adult females, the children usually being sent to the United Kingdom to school. This has seriously affected the development of the population pyramid, but at the present time there is an increasing proportion of European children in the Colony and the population pyramid is now approaching a more normal European pattern. In contrast, the Asian population pyramid shows that the resident Asian community has been established for a long period of time. There is a large base to the pyramid consisting of children up to the age of 15 years. There are relatively few elderly people, because until recent years elderly people tended to return to India. In the past the Asian community showed a considerable preponderance of men, although this unusual sex ratio has been reduced in the last ten years. In 1948 there were 137 Indian and Goan males to every 100 females.

The African population of Kenya consists of many tribes. The four main tribal groups account for only half the total African population. The largest tribe, the Kikuyu, inhabit the area between Mount Kenya and the Aberdare Mountains, and to the north and west of the capital of Nairobi. The second and third largest tribal groups are the Luo and the Baluhya who occupy areas to the west of Kenya on the shores of Lake Victoria. The Luo occupy the central and northern shores of Lake Victoria, and the Baluhya occupy the hinterland of North Nyanza. The fourth largest tribe is the Wakamba who occupy an area in central Kenya, to the east of Nairobi. The total number of main tribes recorded in the 1948 census in Kenya was 87 and there were 19 tribes each accounting for more than one per cent of the African population of the Colony. Most of these tribes have their own languages and social customs, but the lingua franca of East Africa is Swahili.

It is extremely difficult to estimate the population growth of the African in East Africa owing to the absence of basic data. But based on the researches carried out at the time of the 1948 census, and bringing together other surveys and studies made by anthropologists, sociologists, and demographers it is possible to make some estimates. At the present time the African population growth of Kenya is estimated to be in the order of 1 1/2 per cent per annum which will result in the population doubling itself, should that rate continue, in 46 years. It is realised that this is an average rate for the whole of the colony and that rates will differ in different tribes and geographical areas. Population growth was extremely small in the past due to the many endemic diseases and the famines which raged throughout the Colony. The increase in population growth has been relatively rapid and the development might be even faster in the future with the development of medical knowledge, hospitals and hygiene services.

The age distribution of the African population of Kenya has considerable importance in considering economic development. Forty-eight per cent of the African population of Kenya are children estimated to be under 16 years of age, 43 per cent are adult males and females up to 45 years and 9 per cent are elderly people taken to be over 45 years of age. The percentage of children reported may be slightly too high. It will be seen that there is a great preponderance of children in this population, which is an indication not so much of a high birth rate, as a high death rate in previous years. It is, therefore, necessary if children are to be taken out of the working group and placed in schools, for the adult male population to increase its output since the efforts of a few will have to be distributed in economic return among many.

Migration

Immigration statistics have played an important part in population estimates over the last ten years, and they give some indication of the age and nationality, etc., of people settling in the Colony. Farmers of British stock have ceased to be predominant among new permanent immigrants now that commercial and professional people of many nationalities are entering Kenya in large numbers to reside in the towns.

The tourist trade is of considerable importance to the country's economy. As might be expected, the Emergency was responsible for a falling off in the number of visitors to Kenya, and during 1953 and 1954 there was a drop of more than eight per cent compared with 1952. However, during 1955 tourism made a good recovery and the number of visitors rose by some 6,000 to the record figure of nearly 40,000.

EXTERNAL TRADE

The growth of trade in Kenya can be divided into four main periods, which are common to the neighbouring territories also. First came the Pioneer Stage, which saw the building of the main railway system and lasted until 1914. The early Development Period lasted from World War I to about 1930. The Period of Depression lasted from 1931 to about 1937 and finally the Second Development Period started around 1947 and has extended to the present day. Economically, Kenya is developing as quickly today as ever before in its history, in spite of minor setbacks during the Emergency.

During both the First and Second World Wars, trading was on a very restricted scale, and was limited by the shipping available, war supplies having priority. Up to 1914, ivory was the most important export.

After World War I more than 1,200 farms in Kenya were allocated to ex-servicemen. There followed an increase in the demand for European consumer and capital goods to parallel the previous demand for rice and provisions. In three years imports of agricultural implements and machinery trebled. The African also began slowly to acquire a taste for imported articles such as blankets and bicycles, while the 1920's saw the development of imports of motor vehicles and motor spirit. The emphasis on development can be seen in the statistics which show that by 1925 half the imports were of producers' materials and producers' capital goods. Of the exports during the 1920's the main items were coffee, sisal, hides and skins and maize; together in 1925 they amounted to 77 per cent of a total of £2.7 million. This period also saw the development of Kenya's only important mineral, soda, from the soda lake at Magadi.

During the 1930's tea and gold bullion also became major items of export, but coffee was paramount during this period. In 1930, for example, coffee accounted for 42 per cent of Kenya's exports.

Total exports in 1928 were valued at £3.3 million, while in 1935 they were valued at £3.0 million, or a decline of 9 per cent. The decrease in the unit price of exports was more than one-third, but this fall was offset by an increased volume of exports throughout the 1930's.

During the depression years the unit price of imports fell much less than that of exports and the result was a sharp fall in the volume of imports.

After World War II there was a period of rising prices of both imports and exports. Until 1950 many goods were in short supply throughout the world and Kenya's imports were restricted accordingly. After 1950 the demand for goods in Kenya and the other East African territories far outstripped supply with the result that the authorities had to restrict the shipping using the port of Mombasa to avoid congestion. The phasing, as it was called, has now ended with the development of new port facilities.

The heavy demand for imported goods can be attributed to several causes, particularly to capital development and the increase in living standards. The increased population, increased incomes and the inflow of capital, brought in their train greater demand for goods of all types. But in spite of the greater demand for consumer goods, 28 per cent of all imports in 1955 were for capital purposes.

Since 1946 all the basic exports of Kenya, with the exception of gold, have increased in value and value and new agricultural products such as wattle bark and pyrethrum extract have come forward in importance. In 1955 Kenya's exports were valued f.o.b. at £25 million compared with £5 million in 1945, £3 million in 1935 and £2 3/4 million in 1925. It is partly the increasing volume and value of these agricultural exports which have sustained trading in Kenya and helped to develop the Colony.

A developing Colony requires a high rate of capital imports and Kenya has achieved this. An examination of trade balances is difficult to make since many goods for East African purposes enter into the Kenya import statistics.

TRANSPORT AND COMMUNICATIONS

Railways and Harbours

Since the formation of the East Africa High Commission in 1948, the railway system in Kenya has been managed as an integral part of an East African system covering Kenya, Uganda and Tanganyika. The East African Railways and Harbours Administration also controls the harbours of Kenya and Tanganyika, and a road and inland lake system which is designed to link and extend the railway network.

For obvious geographical reasons, the railways of Kenya and Uganda have always been under a single authority, originally called the Uganda Railway Administration. The railway line started from the port of Mombasa in 1895 and reached Lake Victoria at Kisumu in 1901, a distance of 587 miles. Thereafter a number of railway extensions were built. Before 1914 the Germans constructed the railway from Tanga to Arusha in northern Tanganyika, and the Tanga line was linked to the Kenya railway system in 1924. It was not until the completion of the Nile bridge in 1931 that there was an unbroken rail connection between Kampala in Uganda and the port of Mombasa, a distance of 871 miles by rail.

In recent years the railway has been extended from Kampala to Lake George in the west of Uganda, reaching close to the border of the Belgian Congo. In Kenya, railway development since World War II has concentrated upon the improvement of existing facilities to permit a greater and heavier flow of traffic, rather than upon the construction of new lines. Since 1946, over 2,000 new goods wagons, nearly 200 new locomotives and many new passenger coaches have been placed in service. One of the questions of the future, with which the railway administration is already concerned, is the possibility of changing from steam locomotion to either electric or diesel power.

(xx)

Except for the harbour at Tanga, which serves northern Tanganyika, the whole of this single track railway system in Kenya and Uganda, with its connecting links by road and water, is served by the port of Mombasa. There are now eight deep-water berths at Mombasa, with others under construction or planned. In addition there are lighterage and oil wharves. In 1955, some 44,000 passengers landed at Mombasa, while the cargo handled exceeded 3,000,000 bill of lading tons of which two-thirds were imports and one-third exports. More than 1,000 steamships, the majority of them British, and a further thousand sailing ships use Mombasa port each year. The Arab dhows, which make use of the trade winds, have been engaged in coastal traffic with Asia for many centuries, and the dhow sailing vessel is still a familiar sight along the Kenya coast.

Airways

Air transport has developed rapidly in Kenya since World War II. The number of civil air movements at the two airports in Nairobi is more than four times as great as ten years ago. The Nairobi airport of Eastleigh is the only international airport in Kenya, and handles nearly half the air traffic. Eastleigh can accommodate all but the largest of modern jet aircraft. It will be replaced in a few years by the new Nairobi airport under construction at Embakasi, which will provide runways for every type of international aircraft as well as accommodation for the internal lines of East Africa which at present operate from Nairobi West.

Since the formation of East African Airways as a public corporation in 1946, the number of passengers and cargo carried on internal routes has increased tenfold. There are also a number of private companies operating charter and other services, and their activities have been growing.

Motor Vehicles

There are now nearly 60,000 motor vehicles registered in Kenya. In 1955, over 12,000 new registrations were made, but the total number of vehicles on the roads increased by only 7,000, indicating a high replacement rate from accidents and obsolescence. In 1954 and 1955 the supply position of motor vehicles eased, and imports increased rapidly. The increase in the number of vehicles in recent years has been mainly in motor-cars, which have nearly doubled in number in the last five years. By comparison, the number of commercial vehicles has increased much less rapidly. Today commercial vehicles represent only 20 per cent of total registrations, compared with 25 per cent five years ago.

Roads

The very rapid increase in the number of vehicles in Kenya has presented tremendous problems in the maintenance and construction of roads, most of which have yet to be solved. It is not so much a question of the quantity as the quality of roads. This is illustrated by the fact that of the 23,000 miles of roads in Kenya only some 550 miles have a tarmac or bituminous surface. However, such statistics can be misleading, since there is a great difference in traffic densities over the various sections of roadway. Only on a small proportion of the roads is the traffic sufficient to justify the highest quality construction. The Public Works Department, which is responsible for some 4,000 miles of main routes, has for many years been widening, realigning, draining and bridging the existing gravel roads. This is one of the necessary prerequisites to further improvement of the surface. Owing to the nature of the soil in many areas and the rainfall distribution, Kenya has to spend a high proportion of its limited road finances upon maintenance.

Postal Services and Telecommunications

The East African Posts and Telecommunications Administration, which is part of the East Africa High Commission, controls all postal services and telecommunications throughout Kenya, Uganda and Tanganyika.

There are nearly 200 post offices and postal agencies in Kenya, more than half of them being agency offices. In 1955 these offices dealt with nearly 73 million letters and similar articles, two out of three letters representing internal movements. Of the external mail, about three quarters of the movements were with British Commonwealth countries. Parcel traffic in Kenya amounted to over one million articles, of which half were despatched to Kenya from Great Britain. Internal traffic in parcels represented only one-third of the total.

The statistics for telegrams and telephones are not normally published for Kenya alone, but the figures for East Africa give a fair indication of the trends in Kenya. Since 1950, the number of telegrams has remained steady at about 2 1/2 million per year. Both the number of telephones in service and the number of telephone calls have increased rapidly during this period, with a very considerable increase in long distance calls. Since 1950 the number of telephones installed has more than doubled, rising from 20,000 to 48,000 by the end of 1955. During the same period the number of telephone calls per year increased from 28 million to 45 million. There is still a long waiting list for telephones and also for post box facilities at post offices.

AGRICULTURE AND FORESTRY

Agriculture

Before the advent of the European farmer, agriculture in Kenya was entirely in the hands of Africans who tried to grow enough food to support themselves and their families. They cultivated the land until it would no longer support crops and then moved elsewhere to clear new land for cultivation. So long as land was plentiful and the population small in number, this system of shifting cultivation was adequate, but with the growth in population serious limitations were imposed on the extent to which it could continue in its original form. Certain tribes, such as the Luo and the Kikuyu, combine cultivation with the grazing of cattle on the surrounding land; others, the Masai and the Nandi for example, are predominantly pastoralists who lead a nomadic life driving their cattle over large areas of scrub and grassland.

With the opening up of the Highlands to European farming, and the development of other agricultural areas a new pattern of agriculture began to emerge. The building of the railway at the end of last century was followed by the arrival of the European farmer who sought an outlet for his products in the markets of the world. The development of these overseas markets led in turn to the opening up of new agricultural areas, the improvement of communications and the establishment of commercial centres which in turn gave rise to an increase in local demand.

Although African agriculture has continued on a mainly subsistence basis, it has to some extent been drawn into the cash economy, and in certain areas the production of cotton and wattle has been developed for overseas markets. The African also produces hides and skins for export, together with a very small amount of coffee, the acreage of which is being gradually extended. For the home market he produces cattle, maize, ghee, vegetables and other products. Although the total estimated value of African cash sales is only one third of the sales from non-African farms, the entry of the African farmer into the market economy is gaining momentum and is likely to be accelerated further by the implementation of the Swynnerton Plan which envisages the investment of some £5 million in the improvement of African agriculture over the next few years. Many of the African areas have extremely fertile soil and enjoy climatic conditions suitable for plantation crops as well as for cereal crops and cattle.

For the most part, the non-African farms are owned by Europeans and cover a total area of about 7 million acres. There are some 3,000 farms, of which 1,000 are smaller than 500 acres each and of these about 400 can really be considered small-holdings rather than farms. Of the 2,000 large farms and plantations, more than two-thirds are mixed farms, the most usual size being between 500 and 1,000 acres. The 700 farms which are larger than 2,000 acres are in general either estates growing crops such as tea, wattle or sisal, or ranches situated in the low rainfall area.

Although some of the farming areas were occupied by early pioneers before World War I, it was during the 1920's that much of this land was occupied and developed for farming. The early farmers were faced with the problems of uncleared land and forest, and had to find out by costly experiment what crops and what animals would thrive in each area. The absence of an adequate labour supply added to their difficulties. Much capital had to be sunk into the preparation of the land and into capital assets such as buildings, fencing and wiring, and over the years a great deal of this was lost.

The depression of the 1930's hit Kenya farmers in the same way as it did those in other countries. Many managed to survive and, in spite of the drastic reduction in world prices, succeeded in maintaining the value of Kenya's exports through an increased volume of production. During World War II the need to provide food for the Allied forces based in Kenya and for Italian prisoners of war, forced farmers to grow a greater quantity and variety of crops. This development has continued during the period of rapid expansion since the war.

About one million acres are now used for growing crops of which one half is devoted to cereals and one-third to plantation crops. But by far the greatest part of the farming area, amounting to between 4 1/2 and 5 million acres out of a total of 7 million acres, is used for grazing; less than half this land has been fenced and watered. The large area devoted to grazing is an indication in part of the limitations imposed by lack of rainfall on the production of crops. At the beginning of 1955 there were nearly 700,000 cattle, approximately half of which were dairy cattle, more than 300,000 sheep and 200,000 poultry on non-African farms. These figures exclude all animals belonging to the African population resident on European farms.

The level of capital expenditure by Kenya farmers gives some indication of the efforts being made by the farmers to achieve the objective of high quality mixed farming and to ensure that they will be in a position to meet future demands for agricultural produce both from overseas and from within Kenya. Capital expenditure during 1954 amounted to £4 million of which nearly £2 1/2 million was spent on buildings and other permanent improvements such as dams, roads, and fencing, and the remainder on machinery.

Today the plantations provide the most valuable export crops, in particular coffee, tea and sisal. In 1955 the total acreage of plantations under these crops amounted to 270,000 acres, while their export value was £13.6 million. Coffee, tea, sisal, wattle, hides and skins and pyrethrum are the principal exports, and there are a further 14 groups of agricultural items which, although not important individually, each contribute more than one per cent of the total value of exports.

Forestry

It is not always realised that the forest estate of Kenya covers only three per cent of its total land surface. This figure is just over a third of what is usually accepted as being sufficient to maintain perpetual stream-flow and to ensure optimum land utilisation. Thus although the indigenous forests hold great potential wealth, the value of timber exported annually is little over million. The Forest Department ensures that sufficient acreages of trees are planted to replace what is cut for export or local consumption.

During the Emergency, field work, such as cutting firebreaks, was severely curtailed and large areas of valuable timber were destroyed by fire as a result of bombing or Mau Mau arson.

Of the 150,000 acres of forest plantations about one-fifth has been planted with indigenous trees, one-fifth with firewood, and the remainder almost entirely with exotic softwoods (e.g. cypress). Podo and cedar, both indigenous softwoods, are the principal timbers exported.

MINING

Kenya is poor in natural mineral wealth. For a short period during the 1930's valuable quantities of gold were produced, but production was never on a large scale. The value of production has halved since World War II. The only mineral now produced on a large scale is soda ash, which is worked in a low-lying part of the Rift Valley, at Magadi. During the past twenty years, following the building of a branch railway, the production of soda ash has increased steadily. In 1955 production was valued at £1.3 million, nearly all of it for export.

Much of Kenya has still to be surveyed geologically, and there is always the possibility of fresh discoveries being made. A mining company is at present investigating the mineral resources of Mrima Hill on the coast near the Tanganyika border, where it is thought that the deposits of niobium and other rare earths are considerable. The company is studying whether the extraction of these deposits is likely to be a commercial proposition.

FUEL AND POWER

With no oil or coal deposits of her own, Kenya's power requirements are met by electricity and imported oil fuel, which have now replaced wood as the main source of power.

Since World War II the demand for electricity has increased phenomenally, and consumption in 1955 was five times greater than in 1946. During this period installed capacity increased fourfold. In the early post-war years, the increased demand was met

mainly by the use of oil fuel to provide thermal electricity. During the past five years, however, the hydro-electric capacity has increased fourfold and now meets some 90 per cent of Nairobi's requirements. Nairobi's demand for electricity accounts for two-thirds of the total demand of the towns of Kenya.

Hydro-electricity for use in Mombasa is imported from Tanganyika. It is anticipated that by 1958 hydro-power from the Owen Falls Dam in Uganda will be supplementing supplies in Western Kenya.

Imports of aviation and motor spirit have trebled since World War II, to keep pace with the increasing number of vehicles on the road, and the expansion of air travel.

INDUSTRY AND COMMERCE

Apart from the processing of local agricultural products and some small factories engaged in light repairs and manufacture, there were few manufacturing industries in Kenya before 1939.

World War II gave an impetus to secondary manufacturing based on local raw materials. Since 1946 the expanding economy and markets of Kenya and the neighbouring territories have encouraged the further development of secondary industries, and many are now based upon imported materials as well as upon local materials. All the larger towns in Kenya now provide industrial areas for the erection of factories. Electrical power is mainly used, supplemented in some cases by oil fuels. Unless oil or base metal deposits are discovered it is not likely that heavy industry will develop in Kenya. But the development of secondary industry since 1945 has been extremely rapid, and shows every sign of continuing.

Some 3,000 companies are now registered in Kenya. About ten per cent are public companies, the rest being private companies. In addition, over 400 foreign companies have offices registered in Kenya, while a total of over 13,000 business names are registered. The number of companies registered in Kenya has trebled since 1946, and the number of business names has doubled over the same period.

The size of these firms varies considerably. Since 1945 the main development has been an increase in the number of larger firms. By 1955 there were over 150 manufacturing firms in Kenya each reporting the employment of more than 50 people. Some of them employ several hundred people, but as yet there are few private firms employing over 1,000 workers. In addition to the manufacturing firms there were about 150 firms in the building and quarrying industries employing more than 50 persons. The growth of these larger units has not been at the expense of the smaller firm, which still predominates in such industries as clothing, footwear and furniture.

In commerce, the small trader continues to dominate the scene. There are probably 15,000 retail outlets in Kenya, of which only one-fifth reported having employees in 1955. The remainder are run on a family basis, mainly owned by Asians, but with an increasing number of African proprietors entering the industry. The development of business services since 1945 has been rapid, parallel to the growth in industry and trade.

Between 1947 and 1954 the net output of the manufacturing and repair industries of Kenya increased from £4.5 million to £16.0 million. Preliminary estimates show a net output of about £19.4 million in 1955. This is an increase of 330 per cent in eight years, or an average rate of increase of over 40 per cent annually. This rate of growth is high compared with many other countries. These estimates include the value of wages and profits, but exclude the value of materials and other costs which can be attributed to another industry. The value of turnover, if given, would be much higher than the net output figures quoted.

The rate of growth in trading enterprises is not as spectacular as in secondary manufacturing and repairs, but is nevertheless impressive. Comparing 1947 and preliminary estimates for 1955, there was an increase in net output of 160 per cent in the eight years. The estimated value of net output was £8.7 million in 1947 and £22.6 million in 1955. These figures cover commerce, banking and insurance.

CURRENCY AND BANKING

Currency

The currency in circulation in Kenya is the East African shilling which is issued together with other denominations by the East African Currency Board in London. The Currency Board works on similar principles to other colonial currency boards in that it issues East African currency in East Africa against sterling in the United Kingdom. There is, therefore, a rigid and automatic relationship between sterling and the East African shilling, and in fact the currency system of the East African territories is a sterling standard.

The history of the East African Currency Board has been somewhat chequered, and before World War II it was in severe financial straits. As a result of changes in the currency systems, the withdrawal of the rupee and the introduction of the shilling in 1922, a considerable loss was incurred by the East African Currency Board. Currency in circulation remained at a very low level in the inter-war years, reaching its lowest point in 1932 when it was about £31½ million. During World War II and after, there has been a continual expansion in the currency in circulation. During the war the Currency Board issued currency to occupied territories and East African currency has also been in circulation in Aden, since 1951, and in British Somaliland since 1949. Estimates can be made of the amounts circulating in East African territories, including Zanzibar, and the amounts circulating in Aden, British Somaliland and other countries. From 1946 to 1955 the currency circulating in East Africa increased from £21 million to about £54 million.

The tremendous increase in currency, at an average rate of over 15 percent per annum since the war, has been met with more than proportionate increases in the reserves of the Currency Board. At the present time the currency of the East African Currency Board is backed by more than 100 per cent in sterling. The reserves are mostly held in gilt-edged Government stock.

It is almost impossible to make any estimate of the currency circulating in any individual territory on the East African mainland. The currency is issued in one territory but it moves freely, without legal restrictions, between all the mainland territories. Full details of the method of working of the Currency Board are given in the reports of the East African Currency Board.

Banking Facilities

There has been a considerable increase in the banking facilities available in Kenya since World War II. At the present time there are six banks in operation in Kenya. The number of branches in Kenya of these banks amounted to 48 in 1955, and the number of agencies to ten. Although banking statistics are given separately for each East African territory, in fact the banking system works on an East African basis. The demand deposits with banks in Kenya increased from £201/2 million in 1946 to £52 million at the end of 1955. There has been an almost continuous increase in both deposits and also in loans and advances. The amounts owing from banks abroad have fluctuated over the years, since this is the amount which is held by local banks abroad as assets against deposits.

Territorial Savings Banks

The territorial savings banks are controlled by each territory but the East African Posts and Telecommunications Administration acts as their agent and controls the banking facilities. The amount of money deposited in the savings accounts of the Kenya private banks has increased rapidly to over £3 million, while deposits in territorial savings banks, which are used to a great extent by Africans, has shown an increase from £5 million in 1946 to £10 million at the end of 1955. In recent years the increases have been at a slower rate and the territorial savings banks have lost some of their attraction with the increase in the bank rate and the higher rates offered for money deposited with other organizations.

PUBLIC FINANCE

The growth of Kenya's budget from 1921 to the present day has been considerable, even allowing for the change in the value of money. From 1921 until the beginning of the war, revenue and expenditure fluctuated around £21/2 million per annum. Since that date it has increased regularly until, by 1956, the estimates had reached the sum of £41 million. From 1938 to 1956 revenue increased elevenfold.

In the pre-war years the Colony was in its pioneering stage, and during the depression, especially, there was little money available for anything more than the maintenance of the essentials of Government. Revenue and expenditure were extremely closely linked to the basic economy of the country which was agriculture, and which was not prosperous.

An analysis of Kenya Government expenditure over the last ten years shows that it is made up of three main groups: current expenditure on basic services, non-recurrent expenditure on development, and, since 1952, expenditure on the Emergency.

The aim of the Government's financial policy has been a continuous improvement in, and expansion of, the basic services provided by the Government. In spite of the heavy drains of Emergency expenditure in recent years, this aim has been achieved, due in part to the generous financial assistance provided by Her Majesty's Government. Government expenditure on social services has been devoted mainly to education and health; on economic services to agriculture and roads; on law and order mainly to police and prison establishments.

Expenditure on these basic services has to take into account, and include annually, the recurrent costs of maintaining other services originally provided under the development (capital) budget. Development expenditure can be seen to have increased year by year under the impetus of Central Government development planning to the point where expenditure in 1954/55 was some four times more than it was in 1947.

Emergency expenditure, which began in the last quarter of 1952, reached a peak of nearly £16 million in the 1954/55 financial year, becoming a substantial drain on the Colony's financial resources. Such expenditure was met not only by generous financial assistance from Her Majesty's Government, but also by using up all the cash balances carefully accrued by the Kenya Government in the years 1946 to 1951, and by substantial increases in the rates of taxation imposed in the Colony.

The overall effect of the Emergency was to increase the annual rate of Government expenditure from some £20 million to £40 million per annum within two-and-a-half years. This, as stated above, not only exhausted the Kenya Government's reserves, but could not have been met without financial assistance from Her Majesty's Government which became necessary in the first half of 1954. In the following year the British Government contributed £9 million towards the Kenya Government's expenditure of £39 million, and £10 million in the year 1955/56 towards expenditure of some £41 million.

The two main items of revenue in Kenya are customs and excise duties, and income tax receipts. In 1946 customs and excise duties amounted to some £3 million compared with £1 million from income tax receipts. By 1954/55 the revenue of the former had increased to £101/2 million and the income tax receipts to £8 million. A fundamental change had therefore taken place since 1946. While income tax represented 24 percent of the revenue from these two taxes in 1946, it represented 43 percent in 1954/55. This change was in part due to the collection of arrears of income tax.

The general pattern of expenditure was seriously altered by the Emergency. One notable achievement was that, throughout the Emergency, expenditure on basic services continued to expand. Superimposed on normal Government expenditure of this essential type was the special Emergency expenditure on police, prisons, defence and closer African administration. At the height of the Emergency this type of expenditure reached an annual rate of £16 million compared with basic service expenditure of some £20 million. It is planned that Emergency expenditure will be reduced to £8 million in the year 1956/57.

In 1946 the Kenya Government embarked on a development plan to cover the years 1946 to 1956, envisaging the expenditure of £39 million. Experience has shown that a ten-year planning period is too long to carry out planning successfully. A revised plan was drawn up for the three years of 1954 to 1957 envisaging a capital expenditure of £24 million. Of the £29 million spent by 1953, £7 million was spent on agriculture, £21/2 million on water works, £5 million on transport, £51/2 million on education and £1 million on health services.

In the current plan a further £4 million will be spent on agriculture, over £11/2 million on water works, £4 million on transport and communications, 11/2 million on housing of all types, £31/2 million on education and £1 million on health services. In view of the shorter planning period Government capital expenditure will be running at a considerably higher rate in the second plan.

In addition to expenditure by the Central Government authority there is expenditure by Local Government Authorities and Municipalities. In addition to these there is also expenditure by the East Africa High Commission, some of the services of which are stationed in Kenya. Two of the largest of these departments, the East African Railways and Harbours Administration and the East African Posts and Telecommunications Administration are self-financing, but their budgets are submitted to Central Legislative Assembly. The finance of the non-self-contained services, as they are called, is provided by contributions from the East African Governments and other authorities, the contributions not being equal for all departments. The total expenditure of the East Africa High Commission on non-self-contained services in 1949 was £1.2 million and in 1955/56 it was estimated to be £4.9 million. The contributions from Kenya during that period had increased from £0.3 million to £1.3 million.

GEOGRAPHICAL INCOME

Geographical income measures the value of production and services, and is equivalent to the total of incomes received by those in employment and by self-employed persons together with business profits and certain other items. Excluded are all payments made by one business unit to another, whether for the purchase of goods or of services. New capital expenditure is included under the general heading of profits, but the income is calculated net of depreciation. Geographical income differs from national income in that no account is made of the flow of income into and out of the country. Before national income calculations can be made for Kenya it will be necessary to complete a full study of East Africa's balance of payments, which is a difficult undertaking.

The first firm estimate of Kenya's geographical income was made for the year 1947. The cash income of Kenya in that year was under £38 million. By 1954 the cash income was estimated at just under £100 million. This represents an increase of 165 per cent in seven years. There are few countries which can show as high a rate of economic expansion. The percentage increase in Kenya's cash income each year is shown below:—

1948 + 18%	1952 + 3%
1949 + 21%	1953 + 2%
1950 + 19%	1954 + 17%
1951 + 27%	1955 + 23%

When the estimated value of subsistence agriculture is added to the cash economy the record is still most impressive, although subsistence agriculture has increased in value much more slowly, its recorded increase being due to population growth and price increases alone. The total income increased from £53 million in 1947 to nearly £127 million in 1954. In the 1956 Budget speech it was announced that preliminary calculations for 1955 showed Kenya's income to be about £150 million, of which the cash element was over £120 million.

After allowing for the increases in population and in prices, the real income per head has increased substantially in the post war period. Price change is difficult to assess precisely, but using the Nairobi cost-of-living index as a measure it is seen that about one-third of the increase in cash incomes has been due to price changes. Thus, allowing for price changes, the average rate of increase in cash incomes is reduced from 15 per cent (geometric) to about ten per cent each year. Making further allowances for population increase, the real income per person (as opposed to money income) would appear to have increased by about eight per cent per year.

The rate of expansion has not been regular. During 1952 and 1953, when the economic effects of the Emergency were at their most severe, the real income per head dropped by some ten per cent in two years. Since 1953 this fall has been made good and the increase accelerated.

During the years 1947 to 1954 there were four movements of particular interest. Firstly there was a slight decrease in the contribution of agriculture to Kenya's income. This was due mainly to a decline in subsistence agriculture, since agricultural production for the market increased in importance relative to other activities.

Secondly, the manufacturing industries accounted for a steadily growing proportion of Kenya's annual income. Throughout the worst of the Emergency period the increase in manufacturing was sustained.

Thirdly, the proportion of Kenya's income which was taken for the public services increased rapidly after 1953. Previously the public service share of the geographical income has been declining. This was a direct effect of the Emergency.

Fourthly, a greater proportion of the total income was being paid in the form of salaries and wages. This was not so during the period of the Korean war when exceptionally high prices were being paid for agricultural products on the world market. But the long term trend has been towards employed persons receiving a higher proportion of the total income. In particular, African employees have been receiving an increasing share of the real income of Kenya. This is clear from the increase in average wages discussed in the section on employment.

EMPLOYMENT AND WAGES

Of the total European population of men, women and children, four out of ten are in employment, and a further one out of ten is self-employed. In the case of the Asian community, two out of ten are in employment and more than one out of ten is self-employed. These differences are explained by two facts; firstly, few Asian women have entered employment to date, although the number is increasing secondly, the proportion of children to adults is much greater in the Asian community than in the European. Only one out of ten Africans is in paid employment. It is not possible to give any meaningful statistics about self-employed Africans, because so many families are peasant farmers who with their wives and children are engaged in subsistence farming with a small cash element.

Africans constitute over 90 per cent of the total employed population, which is in keeping with general population totals. Of the 550,000 Africans reported in employment in 1955, about 250,000 were employed in agriculture, about 150,000 in other private employment, and about 150,000 in the public services, which include local Government. Since 1946 the number of Africans in paid employment has increased overall by more than 50 per cent, with a higher rate of increase recorded in the towns. During the last six years employment of Africans in manufacturing and repair industries has nearly doubled. The public services also increased very rapidly during 1954 and 1955.

Although the absolute number of Europeans and Asians in employment is small compared with the Africans, their number has increased rapidly since 1946. The number of Europeans in employment increased by two-and-a-half-times, and the number of Asians doubled. Of the employed Europeans an almost equal number are in the public services and in private employment in industry and commerce, while many fewer are engaged in agriculture. Most of the Europeans engaged in agriculture are self-employed rather than employees. One third of the Asians in employment are in the public services; of the remainder, the majority are in industry and commerce, with commerce predominating. Few Asians are engaged in agriculture.

Whereas only 30 per cent of African employees were working in the nine main townships of Kenya in 1955, 70 per cent of the European employees and 80 per cent of Asian employees were reported from townships. The higher rate of increase in town employment since World War II has created housing problems for local authorities. In general, most local authorities have to plan for nearly a ten per cent increase in African housing each year merely to maintain the position against increasing employment, and without making good any previous deficiencies.

Since 1946 wages and salaries have increased rapidly. Between 1946 and 1955 average European wages increased by 50 to 90 per cent and during the same period Asian wages increased by 110 to 140 per cent, and African wages by about 220 per cent.

The minimum wages payable to African employees in towns are subject to control, in accordance with a minimum wage formula based on the essential basic needs of an urban African. It is stated Government policy to raise this minimum standard by two-thirds, for adult workers, over a period of five years from 1955.

The annual wage bill in Kenya has grown since 1946 and has had a very marked effect upon the purchasing power of the community as a whole. The growth is due to an increase in average wages and an increase in numbers employed. In 1955 the reported wage bill amounted to £67 million, of which nearly £45 million was paid in the nine main towns of Kenya. In order to assist market research workers, separate statistics are given for each town in Table 164. It is to be remembered that the incomes of self-employed people and of companies are excluded from these totals.

It will be seen that 25 per cent of the purchasing power of employees is in Nairobi alone, and seven per cent in Mombasa.

PUBLIC HEALTH

Since 1900 there has been a gradual expansion in medical facilities, with a very rapid increase since 1946. For perhaps a generation the majority of Africans were extremely cautious in accepting European medical treatment, preferring to keep to their tribal customs, and their acceptance is by no means complete today.

During the 1930's the African attitude to European medicine began to change. After the war, the return of large numbers of soldiers who had learnt to trust modern medicine, together with the effectiveness of new drugs and the greater availability of medical services helped to accelerate the change of attitude. And today, in spite of the continued expansion of medical services, the demand has become such that facilities are inadequate.

By 1955 there were 8,000 hospital beds in Kenya available to Africans. These beds were mainly provided by the Medical Department of the Kenya Government, but some 14 per cent of the total were provided by missions. However, medical facilities are mainly required in the form of out-patient treatment; for every hospital case, ten patients receive treatment at dispensaries. Until 1955 all medical services in Government institutions were provided without charge to Africans. At the end of 1955 a fee of one shilling was introduced for out-patients at Government dispensaries in Nairobi, with provision for free treatment in cases of need. At a later stage hospital fees for African will be introduced, but these will be designed to cover only a small proportion of the cost, and will be waived if the patient cannot afford the fee.

In recent years the European community has taken over from the Government the financial and management responsibilities for European hospitals. The capital and recurrent charges are the responsibility of the European community, but Government has agreed to pay pound for pound up to certain specified limits. The running costs of these hospitals are met by fees charged and by donations. A compulsory scheme has been established which reimburses most of the hospital fees to individual patients. With assistance from the Government, a Fund has been built up, since 1947, through an annual and graduated tax on the incomes of Europeans, collected for the Fund by the income tax authorities. Of the 500 hospital beds for Europeans, 90 per cent are now under private control.

The Asian community has fewer hospital beds than the Europeans. In 1955, two-thirds of these beds were provided by the Government. Plans are being made to start an Asian Hospital Fund similar to the European Fund, and to build two large Asian hospitals. These hospitals will be financed by the communities with assistance from the Government.

At present, the Medical Department is giving priority to improving medical training in Kenya. Before 1920 few Africans had received even cursory medical training. By 1930, the first formal training had begun, with insistence on primary education for students and the ability to speak English—necessary for purposes of instruction. Most of the Africans trained were men, the women being held back by tribal prejudices. Only in 1955 was the first nurses' training school opened in Nairobi for African and Asian female trainees. Previously a number of small training schools were in operation throughout Kenya but for men only. These schemes are to be amalgamated in Nairobi, and plans have been approved for building a training centre at a cost of £150,000. During 1955 there were over 300 students training as hospital assistants, compounders, laboratory assistants, nurses, health inspectors and assistants, midwives and health visitors.

The statistical table giving the number of doctors and dentists in Kenya (Table 165) must be read with caution. Because there is a single fee for registration, and no annual licence, the register may include a number of doctors who do not practice or who have left the country. Thus in 1953, the number of doctors in Kenya appears to have fallen from 700 to 480, and dentists from 60 to 30. This was due entirely to the removal from the register of a number of names.

The statistics of diseases and deaths reported in Government hospitals must also be read with caution. The bare statistics imply that relatively little progress is being made. In fact, the increased availability of services is maintaining the figures and obscuring the real progress which is taking place. Apart from increased services, the population is increasing and transport facilities have improved. Since 1946 the number of mortalities per 1,000 in-patients has apparently increased. The reason appears to be that improved transport now permits an increasing number of very serious cases to enter the hospitals, which previously would never have reached a hospital.

The statistics of diseases indicate that parasitic diseases are a major problem, although in the towns increased sanitation has already reduced the number of cases of this type, in spite of a rapidly increasing town population. In rural areas, health education has begun to make progress during the last five years. Among the respiratory diseases pneumonia and tuberculosis are the main problems. Discussions are taking place with the World Health Organization who are to assist the Medical Department in carrying out a comprehensive campaign against tuberculosis throughout Kenya. There is a comparative absence of rheumatic conditions. With the diseases of new growth, the Africans show a quite different cancer pattern from European countries. Cancer of the stomach and breast appear to be rare, while cancer of the liver and gullet seem more common, but the absence of diagnosis at death means that comprehensive figures are not available and existing ones may be misleading.

In Nairobi and Mombasa, public health is in the hands of the local councils. They control sanitation, water supplies, food inspection including meat slaughter, and health standards of housing. It is anticipated that as the county council system develops, these authorities will gradually take over responsibilities for public health in other areas. A chain of health centres are planned, to raise the present figure of 20 up to 250.

EDUCATION

The development of education is made difficult by lack of finance and of skilled personnel and the large numbers who must be catered for. There is compulsory education for European children of Kenya residents between seven and fifteen years of age. In addition, the schools at present provide facilities for European children from Uganda and Tanganyika, and also for the children of members of H.M. Forces in East Africa. In 1955 there were 57 European schools in Kenya catering for over 9,000 students, more than one-third of whom were receiving secondary education. Two-thirds of the students were at Government schools and nearly half the studentsevere boarders, which gives some indication of the problem of distance. In primary schools, the average number of pupils per teacher was 22, and in secondary schools 14.

Government expenditure in 1955 on European education amounted to £750,000 of which £330,000 was received in fees and other revenue. £100,000 was spent on school buildings in 1955.

It is compulsory for Asian boys in townships to attend school from seven to fifteen years of age. Because most of the Asian population live in urban areas, many of the Asian children attend day schools. But plans have been approved for the establishment of boarding hostels at selected secondary schools. In 1955 there were 130 Asian schools catering for more than 36,000 students, of whom 15 per cent were being taught at secondary level. Nearly twice as many boys as girls were receiving secondary education during that year. More than half the students were at Government schools, and most of the others were educated at Government-aided schools. This is particularly true of Asian primary school girls. Whereas there are 24 private and unaided European schools, there are only ten Asian schools of this type, catering for only three per cent of Asian pupils. In Asian primary schools the average number of pupils per teacher was 30, and in secondary schools it was 15. The educational system is identical with that followed in European schools.

Government expenditure on Asian education in 1955 was £750,000 of which £120,000 was collected in fees. Expenditure on buildings was £400,000. 1955 was a year of considerable progress and saw the provision of a new secondary school for 560 pupils, and the start of extensions to the teacher training colleges.

Arab education, which is mainly centred in Mombasa, is provided separately, but education for Arab children is not compulsory. There are now nine primary schools for Arabs and one secondary school. Although the proportion of girls at these schools is still only a quarter of the total of 2,200 pupils, the number is increasing. The Government spent £50,000 on Arab education in 1955.

There is no compulsory education for Africans, which is now organized into three stages of schooling, primary, intermediate, and secondary, each stage being of four years' duration. In 1955 there were 3,442 African schools with over 395,000 students attending. About one per cent of African pupils were receiving secondary education, compared with 12 per cent at the intermediate stage, and 87 per cent at the primary stage. About one-quarter of the African pupils were girls. The average number of pupils per teacher was 39 at the primary and intermediate stages and nine at the secondary stage.

Of the 3,400 primary and secondary schools for Africans, only 17 are Government schools, 270 are under local Government control and 2,340 are managed by missions with financial aid from Government sources. The central Government contributed more than £1 ^ million towards African education in 1955, while African District Councils contributed over £300,000. Fees amounted to £380,000, all of which was credited to the revenue of the appropriate authorities. Over £300,000 was spent on building African schools in 1955.

There were 43 teacher training establishments in Kenya, including mission centres, with 2,450 African teachers under training. The three trade and technical schools for Africans had 900 pupils in 1955. A fourth school of this type is nearing completion at the Coast. About half the students were under training as masons or carpenters.

About 200 Africans from Kenya were students at Makerere College, Uganda, and a further 110 were at universities overseas during 1955.

JUSTICE, PRISONS AND POLICE

Justice

The Supreme Court of Kenya was established in 1921 with full jurisdiction in all civil and criminal matters. The Supreme Court sits in Nairobi and Mombasa continuously throughout the year. Circuit sessions are held every three months at Kisumu, Eldoret, Nakuru, Nyeri and other places as required. When Europeans are being tried for serious criminal offences the Supreme Court sits with the aid of a jury of 12 which has similar powers and duties as a jury in England. For lesser offences the number of the jury is reduced to five. When trying non-Europeans the Court sits with assessors who give their opinion on the guilt or innocence of the accused after the judge has summed up. The judge is not bound by the opinion of the assessors, and finally he delivers judgment.

The subordinate courts consist of three classes of magistrates' courts and Muslim subordinate courts. First class courts are held ex officio by provincial commissioners and resident magistrates. Second class courts are held ex officio by district commissioners, and third class courts by district officers. The Governor may make additional appointments, and all appointments are published in the Kenya Gazette. The Muslim subordinate courts are confined to areas where the local population is predominantly Muslim.

There are 141 African courts in the African Land Units and in the larger towns. The courts exercise jurisdiction over Africans only, and consist of a bench of elders appointed by the provincial commissioner. In civil matters the courts administer Native Customary Law, and they also have certain criminal jurisdiction. Fines up to Sh. 500 and imprisonment up to six months may be imposed, although there are some African courts with more extensive powers.

During the past ten years the number of civil cases filed for hearing in the resident magistrates' courts has risen from less than 4,000 to over 16,000 per year, and in the Supreme Court from less than 1,000 to over 3,000. Criminal cases in the resident magistrates' courts trebled during the ten years, and in 1955 amounted to over 63,000 cases. The probation service dealt with more than 2,300 orders in 1955, of which more than a third were juvenile cases. The probation system has claimed a success rate of 50 per cent during the last ten years, and has recently been transferred from the Judicial Department to the Ministry of Community Development.

Prisons

Between 1952 and 1955 the staff of the Prisons Department increased by 740 per cent, i.e. an increase of eight-and-a-half times within three years. The increase was made up as follows:

	1952	1955
Europeans	42	422
Asians	28	95
Africans	1,406	11,850

During the same three years there was the following increase in the prison population:—

	1952	1955
Persons committed to prison or prison camps during the year	20,626	30,803
Persons committed to detention camps (ordinary) during the year	23,201	30,247
Average daily population in prisons and prison camps	9,954	27,134
Average daily population in detention camps (ordinary)	2,475	4,247

At the end of 1955 there were 46 prisons, 20 prison camps, 62 detention camps (ordinary) and 49 detention camps (Emergency). Statistics are not available for persons detained in the Emergency detention camps, which are not included in the figures above. During 1955 the number of persons detained under Emergency regulations decreased, and by the end of 1955 several large camps had been closed.

Persons detained in the detention camps, mainly for minor offences such as tax evasion and trespassing, were employed on public health work and construction. One of the main tasks on which they are engaged is work on the runways for Nairobi's new airport at Embakasi. On an average working day some 3,000 prisoners are employed on this project.

Police

The Kenya Police Force was being expanded even before the Emergency, particularly in 1949 and 1950. Nevertheless it was still considered inadequate to deal with the increasing amount of crime among urban Africans, particularly in Nairobi. The rise in crime was partly due to the fact that during the war many Africans left their reserves for the first time to serve in the army. On demobilization, relatively few were content to return to the reserves and preferred to live in the towns, even if they did not have work or any apparent income. It was several years after the war before industrial development in the towns expanded sufficiently to provide jobs for all who wished to work in the towns.

The expansion of the Police Force before and after the beginning of the Emergency is shown in the following figures which give the strength of the police in round numbers.

	Europeans	Asians	Africans
1946	170	55	4,600
1952	370	95	7,200
1953	1,000	120	9,800
1955	1,500	120	11,300

Full-time reservists are included in the above figures, but not part-time police.

The Police Reserve increased from 3,500 in 1951 to 9,400 in 1955 of whom 1,200 were on a full-time basis. By the end of 1955 large numbers of the police reserve were already being released from active police duties, which was a measure of the success achieved in bringing the Emergency under control. This was in marked contrast to the position two years earlier when not only was the demand for policemen greater than the supply, but many other aspects of police work were stretched to the limit.

CONSTITUTION

LEGISLATIVE COUNCIL: COMPOSITION

Table 9

The Governor (President).
The Speaker (Vice-President).
8 Ex-Officio Members.
18 Nominated Members.
21 Elected Members.
7 Representative Members.

Ministers are appointed by Royal Warrant.

Ex-Officio Members are persons holding Public Office.

Nominated Members are appointed by Instrument by the Governor. Elected Members qualify and arc elected in accordance with the Laws of Kenya. Representative Members arc persons not holding public office appointed by Instrument by the Governor.

POPULATION

Notes and Definitions

Population statistics for the 1948 census relate to the de facto civil population only. Wives and families of members of the armed forces are included, and in previous censuses it is believed that this same breakdown was followed. The non-native population count was made on the night of the 25th of February, 1948, but the African population was enumerated on 23rd August, 1948. For areas in the Northern Frontier Province, Samburu District and the East Suk Area of Baringo District, estimates have been made in lieu of a census enumeration.

Estimates of the population for years following 1948 were made as follows: The results of the 1948 census were used as a base. A natural increase of 1 per cent for Europeans, 2 1/2 per cent for Asians and 1 1/2 per cent for Africans per annum was added to the census totals. Estimated immigration and emigration for each of the non-native races were then computed and used to adjust the base figures, allowance being made for under-enumeration of emigrants. Persons who entered as visitors and later became permanent residents were included. The number of unknown factors involved made these estimates subject to some error, but it is believed that they furnish a reasonable indication of the change in population in the years since the 1948 census.

*The statistics of the population residing within township boundaries arc based on those census schedules showing residence in towns. As boundaries arc not always known by householders it is possible, especially in the ease of the African population, that the statistics are not entirely consistent.

MIGRATION

Notes and Definitions

Immigration statistics are collected under an Immigration Ordinance and emigration statistics are collected under the Statistics Act, 1949. Every person entering the territory is obliged by law to complete a form except, since August, 1948, visitors to East Africa passing through the E.A. High Commission Territories and between these territories and Zanzibar. These visitors are required to complete a form only on their first entry into one of the E.A. High Commission Territories or Zanzibar. There are immigration officers at seaports and main airports, but there is no strict land frontier control. Statistics of migration by sea and air are relatively accurate but those of land migration are liable to considerable error.

The categories for migrants used in the compilation of migration statistics are not legally defined. In general the attempt has been made in practice to define visitors so as to satisfy the requirements of the International Tourist Travel Association and "permanent" migrants for the purposes of population studies. Since entry permits and passes are issued with a different purpose, there are cases where it is slightly doubtful into which category a migrant should be placed. The number of such cases is, relatively, very small, however.

OLD RESIDENTS:

Persons returning to the territory are classified as old residents if—

- (a) they have a Certificate of Permanent Residence; or
- (b) they have a valid Re-entry Pass; or
- (c) if they have been resident in the territory (other than as a visitor or person in transit as defined below) and have been absent for a period of less than one year.

NEW PERMANENT IMMIGRANTS:

Persons entering the territory are classified as new permanent immigrants if they are not old residents as defined above and—

- (a) they have an Entry Permit. (This allows them to become residents of the territory); or
- (b) they have a Dependant's Pass; or
- (c) they have a Temporary Employment Pass; or
- (d) they have a Pupil's Pass; or
- (e) they enter the territory as visitors and later obtain permits to become residents.

PERSONS IN TRANSIT:

Persons entering or leaving the territory are classified as this if they have an In Transit Pass. These passes are issued when persons are passing through the territory to a destination outside it and are valid for a period of up to one month. This pass is not required for anyone who does not stay overnight in the territory, or crews of aircraft and ships. These are not recorded in the migration statistics.

VISITORS:

Persons classified thus are those who have—

- (a) a Visitor's Pass; or
- (b) a Special Pass.

Visitors Passes are valid for up to six months and allow the visitor to pursue temporarily his business or profession as well as covering holiday visits. Special Passes are valid for up to two months and cover a number of short emergency visits as well as cases where further investigation has to be made before another pass is issued. Certain people who enter as visitors later obtain permits which allow them to become residents. These are then required to fill in a further immigration schedule and statistics of the change overs to new permanent immigrants are produced.

A permanent emigrant is defined as a person who has resided in the territory concerned (other than as a visitor or person in transit) and who on departure states that he is leaving permanently.

Indigenous Africans are not obliged to fill in migration forms, so the short-distance movement of natives to and from neighbouring territories is not covered by the statistics. Thus the number of Africans covered is very small, and refers largely to sea and air travellers from further afield.

Owing to the introduction of new migration schedules it was difficult to provide statistics of visitors and total migrants for Kenya for 1950 onwards in a form strictly comparable with those for previous years. The relatively small numbers of visitors to East Africa who entered Kenya from one of the other East Africa High Commission Territories or Zanzibar are included in the statistics for the years before 1949, but not subsequently.

EXTERNAL AND INTERTERRITORIAL TRADE

Historical Note

1. In the valuation of East African trade it must always be remembered that valuation is at the point of entry or exit. When looking at East Africa as a whole, this makes no difference, but when studying the trading position of each territory, it results in Uganda's exports being over-valued and her imports under-valued; the same applies to a considerable volume of trade conducted by the northern provinces of Tanganyika, which almost exclusively make use of the port of Mombasa. The result is an inflation of the balance of trade, the figures in Annual Trade Reports for many years being biased in Uganda's and Tanganyika's favour. An accurate statistical picture, were such an exercise worth doing, would show a different story. It should also be noted that into Kenya's statistics of external trade are added many of the imports used on an East African basis, whether by public utilities, headquarters of industrial and commercial concerns, hotels, or other organisations.

2. Prior to 1949, when the customs of Kenya, Uganda and Tanganyika were unified, Annual Trade Reports were prepared for Kenya and Uganda as a single unit and Tanganyika as a separate unit. Trading between the two separate units was treated on the basis of foreign trade.

3. From 1949, all trade was valued at the point of entry into or exit from East Africa and credited to the territory to or from which the goods were consigned.

4. From 1950 onwards, imports have been recorded on a "Net Imports" basis, which allows for adjustments of transfers of imported goods from one East African territory to another, so that the final territory of destination is shown as the importing territory. Furthermore, the transfer of local produce and manufactures between the three territories has been excluded from the external trade statistics from that year.

5. Because of the difficulties in presenting a comparable series, it was decided to produce summaries of net imports and re-exports from 1950 and domestic exports from 1949 only for this publication. Earlier data is available, however, and can be obtained on request from the E.A. Statistical Department.

Notes and Definitions

1. **Net Imports.**—Imports received direct from countries outside East Africa, plus imported goods transferred from Uganda/Tanganyika, minus imported goods transferred to Uganda/Tanganyika. This basis produces negative quantities and values in certain instances (see note 17 below).

2. **Re-exports.**—**Imported** goods subsequently re-exported without change of form to countries outside the East African territories or re-exported as aircraft and ship's stores.

3. **Domestic Exports.**—Kenya produce and manufactures exported to countries outside the East African territories or as aircraft and ships' stores.

4. **Retained Imports**—Net imports, minus re-exports.

5. **Transfers.**—**Goods** originating from outside the East African territories which are consigned from one East African territory to another. These transactions are not included in re-exports, but, as stated in the historical note (4) above, result in the presentation of imports on a "Net Imports" basis.

6. **Interterritorial Trade.**—The exchange of local produce and manufactures between the three East African territories only. The details for this type of trading can be regarded as approximate only, due to the long lines of communication and the small number of customs posts. Included in the value of goods entering this trade is the customs duty on excisable commodities and imports duty on imported raw materials used in locally manufactured products. The value is thus overstated for many items and particularly shows a false value in Uganda's favour in respect of transfers of locally manufactured cigarettes.

7. **Values.**—

(a) *Imports:* Imports are valued at the point of entry into Kenya. The value includes cost, insurance, freight and any commission except buying commission up to five per cent and excludes customs duty and any landing charges payable within Kenya.

(b) *Re-exports and Domestic Exports:* Valued free on board ship or aircraft. The amount of any Kenya levy, cess or export tax to which goods are liable is included in the value.

8. **Specie and Currency Notes.**—Included at their intrinsic value as base metals and paper respectively.

9. **Gold Bullion and Unrefined.**—Gold bars, unworked and partly worked gold and gold ore. Import and export values of gold are included in the external trade statistics.

10. **Country of Origin.**—The country in which the goods were grown or produced; in the case of manufactured goods, the country in which the manufacturing process was substantially completed. When the country of origin cannot be determined, the goods are shown as originating in the country from which they were consigned.

11. **Country of Destination.**—The country of final destination as far as can be ascertained at the time of export. If, however, the country of final destination is unknown, the country to which immediately exported is used.

12. **British Countries.**—All the countries of the Commonwealth including Protectorates, Mandated Territories and Condominions.

13. **Sterling Countries.**—All British countries and Burma, Eire, Iceland, Libya, Iraq and Jordan, but excluding Canada and Newfoundland and the Anglo-Egyptian Sudan (now the Sudanese Republic).

14. **Government Imports and Exports.**—Imports and exports made direct by Kenya Government Departments, East Africa High Commission Departments (including the Railways and Harbours and Posts and Telecommunications Administrations), the Colonial Development Corporation and Foreign Consular Services, when shown as destined for or originating from Kenya are included in all the tables in this publication. Details are separately recorded under each article of imports in the Annual Trade Reports. Naval, Military and N.A.A.F.I. (E.F.I.) imported stores (except goods imported by N.A.A.F.I. (E.F.I.) on which duty is collected) are excluded.

15. **Aircraft and Ships' Stores.**—Shown as a separate item in domestic exports and re-exports. Details are recorded under each commodity of exports in the Annual Trade Reports.

16. **Parcel Post Imports.** -Prior to 1st August, 1952, goods imported by parcel post and valued over £50 were shown under the respective articles of imports; those valued under £50 were allocated to a special parcel post category. Since 1st August, 1952, all imports by parcel post have fallen under the special category as they are not analysed by article. The quantity and value of specific articles of imports is therefore understated to the extent of trading by means of parcel post; this must particularly apply to cotton and silk piece goods. The value of overseas parcel post entries into Kenya for the years 1950-1955 was as under:—

1950: £0.4 million, representing 1.1 % of total net imports.

1951: £0.6 million, " 1.2%

1952: £2.4 million, " 4.1%

1953: £4.0 million, " 7.8%

1954: £5.4 million, " 8.9%

1955: £6.6 million, " 9.2%

17. **Negative Quantities and Values—Net Imports.** —Are caused by the transfer, from one territory to another, of goods imported in a previous year or at a higher value than when originally imported.

18. **External Trade Indices.**—Notes on the method of compilation of the External Trade Indices are given in an introductory article in the March, 1954, issue of the "Quarterly Economic and Statistical Bulletin," published by the E.A. Statistical Department. Further information will be given on request.

19. **Introduction to East Africa of the "Standard International Trade Classification".**—With effect from 1st January, 1954, the new "Official Import and Export List" of the E.A. Customs and Excise Department, which is based on the "Standard International Trade Classification" approved by the United Nations and amended slightly to cater for specific East African needs, took the place of the local trade classifications previously in use. Comparisons in respect of certain individual articles for the years 1954/1955 and earlier years are therefore not always possible. Assistance in overcoming any difficulties experienced can be obtained from the E.A. Statistical Department.

20. **Rounding of £'000.**—In many instances throughout the trade tables, individual figures will not add to totals because of rounding to £'000.

21. More detailed definitions and notes relative to East African trade are to be found in the Annual Trade Reports of Kenya, Uganda and Tanganyika, published by the East African Customs and Excise Department.

*Includes certain materials for the production of food and also unmanufactured tobacco.

†Includes feeding stuffs for animals; oilseeds and nuts; processed oils and fats; all aviation and motor spirit; all fuel oils, lubricating oils and greases.

‡Excludes private motor cars, motor cycles, cycles and domestic appliances, furniture and fixtures, all of which are shown under "Consumers' goods."

§Includes private motor cars, motor cycles, cycles and tyres and tubes for same; domestic appliances including refrigerators, wireless sets, sewing machines, wood and metal furniture and fixtures and other household utensils; all cotton and other piece goods; blankets; all articles of clothing and footwear.

¶Includes all parcel post goods (which are not classified by articles); livestock not for food; gold and silver.

¶Includes buses, trucks, lorries, trailers and other road motor vehicles (complete) (except private); aircraft; typewriters, accounting, book-keeping, calculating and other office machines (complete); safes and strong room fittings.

**Includes prefabricated buildings and their assembled parts; sanitary, plumbing, heating and lighting fixtures and fittings; scientific, medical, optical, measuring and controlling instruments and apparatus.

It has not been possible to define all classes of producers' capital goods applicable to the East African Railways & Harbours and Posts & Telecommunications Administrations, and, therefore, the figures must be accepted as a rough estimate only.

‡‡Other "Government" relates to the three territorial governments and the non-self-contained departments of the East Africa High Commission.

*In tables 50 and 51, the 1949 index numbers have been recalculated to include the revised list of export commodities used from 1951 onwards.
With the introduction to East Africa of the Standard International Trade Classification (as from 1st January, 1954), it has not been possible to continue to include the complete list of import articles used for the 1950-1953 calculations owing to changed classifications. As an indication, the following is the percentage value of total imports used in the calculations of this index:

1951-81%; 1952-79%; 1953-77%; 1954-66%; 1955 -64%.

‡In tables 49-52 inclusive, "Price" means "Unit Value."

TRANSPORT AND COMMUNICATIONS

Notes and Definitions

1. East African Railways and Harbours.—General statistics relative to Kenya, Uganda and Tanganyika on a territorial basis are available up to 1950 only, for, as from 1st January, 1951, the Administration adopted the principle of operating the system on an East African basis.

2. Shipping.—

- (a) Details of entry only have been given in this publication.
- (b) Statistics relate to both steam and sailing ships engaged in international or coastwise trade, arriving either with cargo or in ballast. A tug with lighters in tow is counted as a single steamship with a tonnage equal to the combined tonnage of the tug plus the lighters. Naval craft are not included.
- (c) Returns are received from the following Kenya ports, each call at a port being counted separately:—
Mombasa: Malindi: Lamu: Kipini: Kilifi: Funzi and Shimoni.

3. Air Traffic.—

- (a) From 1952, statistics include all commercial aircraft using Eastleigh and Nairobi West Airports.
- (b) R.A.F., Military, Police, training, testing and private aircraft movements are not recorded.
- (c) Total number of passengers handled is the number embarking and disembarking, including transit passengers twice.
- (d) Passengers in transit are those continuing their journey in the same aircraft.
- (e) Passengers landing or embarking are mainly those completing or commencing their journey, but the statistics do include a small number changing aircraft or staying over for a few days.
- (f) Freight handled is the weight of freight and mail unloaded from or loaded into aircraft. It does not include aircraft fuel or stores or goods remaining in the aircraft.
- (g) Movements: Each touch-down and take-off is counted as a separate movement.

4. Roads.—

No early data has been quoted because owing to the lack of information recorded, comparisons of current data with earlier published figures would only be misleading.

5. Motor and Other Road Vehicles.—

(a) Detailed analyses of motor and other road vehicles by type, make, horse power, cubic capacity, carrying capacity and method of propulsion are available in the Kenya Inland Revenue Department's published quarterly and annual statistics from 1950 onwards.

(b) For Kenya, all Government owned vehicles are included, but military owned vehicles are excluded from the statistics.

6. **Posts and Telecommunications.**—Since the introduction in 1949 of a unified East African service, only certain statistical series relative to the separate territories have been retained and, as far as possible, details relative to Kenya only have been shown in this publication. Other data has had to be shown on an East African basis.

7. In certain of the tables published under the heading of "Transport and Communications", individual figures will not necessarily add to totals because of rounding.

AGRICULTURE

Notes and Definitions

The quantities of agricultural production and exports have been translated from bags, centals, etc., into tons to facilitate comparisons. -For the same reason price units have been made uniform in each table.

Data on non-African agriculture are relatively accurate and comprehensive. For the main crops statistics of production are available, compiled from statutory returns completed by farmers or from deliveries to the various controlling Boards. Prices for some farm produce are guaranteed by Government and for others there is an average payout to producers based on the total receipts of the relevant Board or Control

There are no statistics of total production of African grown crops but for some of these, e.g. cotton and coffee, sales give a good approximation to this. Considerable quantities of basic food crops, grown mainly for subsistence purpose, are also produced for sale either in local markets or to produce merchants, e.g. maize, pulses, groundnuts, potatoes, etc. In Kenya the marketing of most of the main crops is organised and statistics of the quantities sold are available.

Exports

Prior to the amalgamation of the Customs Departments of the three East African territories, goods which were sent abroad by one territory via another territory were shown at their amounts and values as exported to the "in transit" territory. This applied in particular to goods from Tanganyika which were sent abroad via Kenya or Uganda. From 1949 onwards, however, all exports abroad were recorded at the port of loading in East Africa. It was necessary therefore to make the exports for the period 1938-1948 comparable with those for the year 1949 and onwards. This has been achieved by studying from the Annual Trade Reports the Kenya and Uganda imports and re-exports of Tanganyika produce and allocating the commodities, whenever possible, to the producing territory as they left East Africa. A similar procedure has been adopted for Kenya and Uganda produce imported into and re-exported from Tanganyika Territory. In certain cases, approximations have had to be made but in all instances the maximum error which will be caused by this is small. The export tables exclude interterritorial transfers which, for some produce, are large.

FORESTRY

Notes and Definitions

The tables cover licensed timber cutting (excluding fuel) from forest reserves and public lands. Timber cut from private land is not incouded since reliable statistics are not available. This is only a small proportion of total production, and a very small amount of timber which is issued free is omitted from the totals. The factor 1.27 is used for converting production in hoppus cubic feet to round timber true value.

Exports retained in the other High Commission territories are excluded from the export tables. "Timber" is defined as logs, rough hewn or not, or sawn lengthwise or squared. Firewood, poles and railway sleepers are excluded.

ANNUAL PRODUCTION OF TIMBER AND VALUE OF EXPORTS												Thousand cu. ft.	
YEAR	SOFT WOOD						HARD WOOD				Total	Value of Exports

Note.—Production in round timber true volume.

MINING

Notes and Definitions

Kenya statistics of mineral production are compiled from returns made by mining concerns. For salt and lime commercial output only is covered, but considerable quantities of these items which are mined and used on farms, etc., are not recorded. The values given for gold, lime, kyanite and diatomite are the gross amounts realised by the producers.

§Carbonic acid gas.

FUEL AND POWER

Electricity.—For the period prior to the second quarter of 1948, sales of the East African Power and Lighting Company are given. This company held, until then, a monopoly for the public sale of electricity, but as from that quarter a small amount has been sold by the Kenya Government in the Nyeri area. Electric power has been exported by land line from Tanganyika to Kenya since 1949, and is included in the sales at Mombasa.

Firewood.—These statistics are for licensed firewood cutting, i.e., sales and free issues from forest reserves and public lands. A large quantity of fuel collected by Africans for their own use is unrecorded. The factor 0.75 is used for converting stacked cubic feet to solid cubic feet.

INDUSTRY AND COMMERCE

Notes and Definitions

Company Statistics

The value of subscribed capital of companies registered is not, at present, available and therefore no indication of the volume of investments can be given. The nominal capital gives no guide to this since businesses being converted into limited liability companies and others where the capital is only partially subscribed are included. The nominal capital of foreign companies is not shown as it is the total registered capital of the companies in all countries and therefore does not give any indication of the amount of capital invested in Kenya.

Bankruptcy statistics do not include companies winding up.

Building

Statistics of private building are compiled from returns received from owners of new buildings and extensions completed in the following towns:

Nairobi. Mombasa. Kisumu. Nakuru. Eldoret. Kitale.

Building outside the city or municipal boundaries is not included.

The term "extensions" includes all alterations and additions to buildings. Extensions are included with the new buildings statistics prior to 1950, but from 1950 onwards they are excluded and their estimated total cost only is shown separately.

Commencing in 1953 buildings which are partly residential and partly non-residential have been allocated under the "number of buildings" according to their main purpose. Previously such buildings were classified as non-residential. Floor area has been divided between residential and non-residential throughout.

A block of flats is counted as a single building.

Floor area is defined as plinth area together with the floor area of any external ancillaries such as garages, servants' quarters, store rooms, lavatories, etc.

() For the purpose of this table, all branch establishments in Kenya have been amalgamated with the head office, and the total number of employees (of all races) obtained in this way is the basis for classification by size.

(b) Only firms reporting employees are included in the table. Self employed persons are excluded.

AREAS OF AGRICULTURE AND INDUSTRY

BANKING AND CURRENCY

Notes and Definitions.

Commercial Banking.—The different categories of deposits are defined as follows:

Demand: subject to transfer or cashing by cheque.

Time: usually not subject to transfer by cheque and lodged for a definite period subject to notice of withdrawal.

Saving: lodged for no fixed period of time, and not subject to transfer by cheque.

The Kenya Land Bank was established in 1931. Its main function is to provide financial assistance against security to farmers on long term for purchasing land, discharging existing mortgages, making permanent improvements, buying livestock, seed or agricultural equipment, or on short term for meeting the cost of farming operations or minor improvements. Long term loans may be up to a maximum of £5,000 or up to 60 per cent of the value of the land and are repayable in not more than 30 years.

Under the heading "Loans Reverted to Land Bank on Foreclosure" (Table 131) positive amounts represent farm properties taken over by the Land Bank, and negative amounts arise from the sale under agreement, of these properties. A farm property taken over diminishes the balance of loans outstanding, and a farm property sold under agreement increases it.

Currency.—East African Currency circulates in Kenya, Tanganyika, Uganda, Zanzibar, British Somaliland and the Aden Protectorate. The standard coin is one Shilling E.A.= 100 cents. This is exchanged in London at the rate of 20— E.A. for £1 sterling subject to a maximum premium of 1/2 per cent on transfers. Currency notes are used for denominations of 5/- and over, silver or cupro-nickel for 1/- and 50 cents pieces and copper for lower denominations. The currency is supervised by the East African Currency Board established in London. The shilling currency was introduced in Kenya, Tanganyika and Uganda in 1922, in Zanzibar in 1935, in Somalia, Eritrea, British Somaliland and Ethiopia at various dates subsequent to August, 1941 and was withdrawn from Ethiopia, Eritrea and Somalia during 1949 and 1950. In October, 1951 it was made legal tender in the Aden Protectorate.

PUBLIC FINANCE

Notes and Definitions

"Current" Revenue and Expenditure, means Revenue and Expenditure excluding Development Fund Revenue and Expenditure.

Public Finance Statistics

The form in which Government accounts are kept and published is determined by the administrative structure and by the requirements of financial control. For some purposes this form does not present the clearest picture and it is convenient to re-arrange the accounts on a "functional" basis. That is, to arrange them in such a way that the service or section of the economy upon which money is spent, and the way in which the Government gets its money, can be clearly seen. The problem is put very clearly in Annexure II to the Uganda Protectorate Estimates for 1953:

"The present form of the Protectorate Estimates has been devised so as to facilitate the control of expenditure rather than so as to exhibit expenditure under subject headings. It thus happens that expenditure on a single subject may appear in the Estimates under several different heads of accounts. For example, the figure appearing against the head 'Education' in the 1953 Estimates is £1,552,841. But to obtain the full expenditure on educational activities it is necessary to add to this figure £213,705 from 'Subventions' (grants to Makerere College and other educational institutions), £696,088 from 'Public Works Extraordinary' (school buildings), £10,500 from 'Miscellaneous Services' (Special Scholarship Fund, etc.) and £130,000 from 'Colonial Development and Welfare Schemes,' giving a total expenditure on education of £2,603,134."

The accounts given here are arranged on a functional classification.

Kenya Government Current Expenditure (Table 137), Emergency Expenditure

This item does not represent the whole of the budgetary cost of the Emergency. The sums quoted under this head are those paid into the Emergency Expenditure Fund. This Fund is under the direct control of the Treasury and was set up so that urgent expenditure on the Emergency could be made speedily, and at the same time controlled. There is other expenditure attributable to the Emergency, provision for which is made through the estimates in the usual way.

Grants and Loans from the United Kingdom Government in connection with the Emergency

To help pay for the Emergency, the Government of Kenya had received, as at 30th June, 1956, the undermentioned grants and loans from the Government of the United Kingdom:

U.K. Financial Year	£ million
1954/55	Grant 8
	Loan 3
	Total 11
1955/56	Grant 10
	Loan 4
	Total 14
1956/57	Grant 4
	Loan 2
	Total 6

Kenya had taken up these grants and loans as follows:

Kenya Financial Year	£ million
1/2 1954	Grant 2
1954 55	Grant 6
	Loan 3
1955/56	Grant 10
	Total 21

The Kenya Development Fund

It is possible to describe the Development Account as the Capital Account of the Colony, but to do so would not be quite correct, for the Development Account includes items not of a capital nature and the Colony Account contains items which are of that nature. The distinction between the Development and the Colony Accounts is not related to any separation of capital and current transactions but in general to whether a particular project was included in the Development Plan. The expenditure of the Colony Account and of the Development Account must be taken together in order to see the full extent of Government spending, care being taken to see that transfers from the Colony Account to the Development Account are not counted twice.

In any year Development Fund Revenue and Expenditure do not balance; sometimes one is greater and sometimes the other. In considering the revenue and expenditure of the Development Fund it is more appropriate to consider cumulative tables. But even totals cumulative to a particular point in time do not necessarily balance. The difference, whether positive or negative, is carried by the Colony and is reflected in the Colony's Assets and Liabilities. For instance, to June, 1954, the cumulative revenue total is £36,623,526 and the cumulative expenditure total is £31,867,864. The excess of revenue over expenditure £4,755,662, is held by the Colony and appears as a liability in the Colony Statement of Assets and Liabilities as at 30th June, 1954. Where Estimated Expenditure exceeds Estimated Revenue the deficit will be met by raising loans.

Customs and Excise Revenue

As from the 1st January, 1954, the classification of the East African trade statistics was changed from the old basis to the Standard International Trade Classification. The statistics of customs and excise revenue are therefore tabulated in two parts: up to and including 1953 in Table 140, and 1953 and after in Table 141.

GEOGRAPHICAL INCOME AND NET PRODUCT, 1947-1954

NAIROBI

COST OF LIVING INDEX (EXCLUDING RENT)
(Base Aug. 1939- 100)

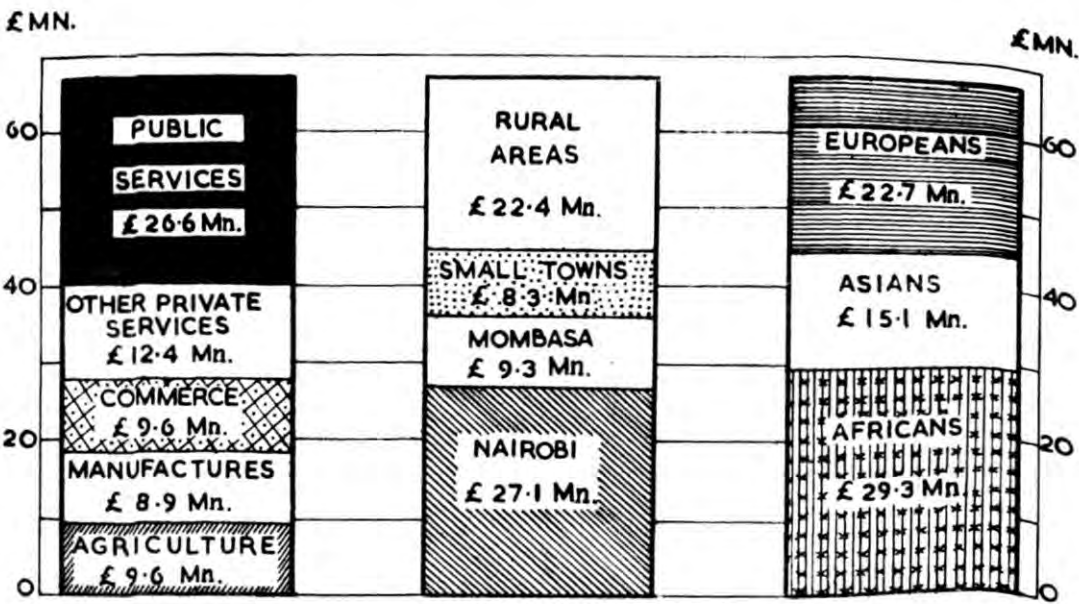

WAGES

INDEX OF AVERAGE WAGES, 1946—55
(Private Industry and Commerce)
(1946=100)

DIVISION OF KENYA'S WAGE BILL, 1955

RETAIL PRICES AND COST OF LIVING

Notes and Definitions

The Nairobi cost of living index (excluding rent) measures, with a base August, 1939, the cost of maintaining a standard of living prevailing among European Government servants with a basic salary of less than £500 per annum in 1947. The weights used were based on a survey carried out at that time.

Prices are collected from 84 representative dealers for 180 articles.

The weights used for this index are as follows:

	Weight		Weight
(1) Food, Drink and Tobacco	43	(5) Papers and Periodicals	1
(2) Household	11	(6) Wages	13
(3) Pharmaceutical Products	3	(7) Transport	11
(4) Clothing and Footwear	10	(8) Amusements	3
		(9) Miscellaneous	5

The weights adopted in the food, drink and tobacco group are set out below. The items in the food, drink and tobacco group number 42.

	Weight		Weight
(1) Groceries	24	(5) Fruits	7
(2) Meat and Fish	18	(6) Vegetables	6
(3) Dairy Produce	14	(7) Beverages and Tobacco	25
(4) Bakery	6		

The wage adjustment index is a recalculation of cost of living index as shown in Table 151, excluding all increases in duties on alcohol and tobacco since August, 1939. As the alcoholic beverages and tobacco group has a weight of ten in the cost of living index the removal of increases due to duty changes has a considerable effect on the movement of this index.

EMPLOYMENT AND EARNINGS

Source

The Annual Enumeration of Employees, carried out by the East African Statistical Department in co-operation with the Labour Department, Kenya. This enumeration has taken place on the 30th November each year, and excludes military personnel.

Definitions

- (a) *Public Services* include Kenya Government, High Commission (Kenya only), E.A. Railways and Harbours (Kenya only), E.A. Posts and Telegraphs (Kenya only), Defence (civilians only), Local Governments and African District Councils.
- (b) Private employers engaged in several activities were asked to state their main activity, and this was the basis of industrial classification. Agricultural and domestic employers are included under the general heading of "Private Employment."
- (c) In Private Employment:
 - "*Manufactures and Repairs*" includes power and light services.
 - "*Commerce*" includes legal and business services.
 - "*Other Services*" includes domestic service, education, medical and health, religious, community and personal services.
- (d) Over time the coverage has improved, especially since 1954, and therefore the figures are not always strictly comparable.
- (e) *Employment Figures* include all apprentices and part time workers, but exclude directors and partners without basic salary.
- (f) *Earnings or Wages* cover all cash payments, including basic salary, cost of living allowances, profit bonus, together with the value of rations and free board, and an estimate of the employer's contribution towards housing. Non-cash benefits such as retirement benefits and passage assistance are excluded.
- (g) The *Annual Wage Bill* is an estimate from monthly data (November). The reported earnings for the month are multiplied by twelve.

EMERGENCY

A State of Emergency, to deal with the Mau Mau uprisings by the Kikuyu tribe, was declared on October 20th, 1952. Only about one fifth of the total African population of Kenya was affected and the terrorists were mainly confined to the Central Province and the eastern half of the Rift Valley Province, where the Kikuyu are mostly found. But the impact on the economy of Kenya was widespread, as can be seen by comparing figures for pre-Emergency and Emergency years in almost all the tables of this Abstract. By 1955 the rebellion was being brought well under control.

EMERGENCY REVENUE AND EXPENDITURE

Table 185 £

YEAR	Revenue	Expenditure
1952		750,000
1953	—	3,000,000
Jan.-June 1954	2,000,000	8,500,000
1954/55	9,000,000	16,000,000
1955/56	10,000,000	14,000,000
1956/57	6,000,000	8,000,000
TOTAL	27,000,000	50,250,000

Source: Kenya Colony Estimates and Accounts.

Up to 1955/56 Revenue figures are U.K. Grants and Loans as taken by the Kenya Government. The 1956/57 figure is a budgetary one. Kenya Government may not take £1 million. See also notes to Public Finance Section, page 79.

In addition some 50 men were called up and directed to remain in their civil employment and 45 redirected back to it.
In addition to the 972 men called up at the beginning of 1955, some 350 men were serving temporarily with the security forces as volunteers.
