zaf-statssa-lmdsa-2019-v1.1

Version

VERSION DESCRIPTION

v1.1: Edited, anonymised dataset for public distribution

PRODUCTION DATE

2021

NOTES

Version 1 of the Labour Market Dynamics in South Africa 2019 was downloaded from Statistics South Africa on the 19th of January 2021. Unfortunately, the earnings variables had all values missing.

Version 1.1 was downloaded from Statistics South Africa on the 29th of January 2021. It includes earnings data.

Overview

ABSTRACT

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (StatsSA). It collects data on the labour market activities of individuals aged 15 years or older who live in South Africa. Since 2008, StatsSA have produced an annual dataset based on the QLFS data, "Labour Market Dynamics in South Africa". The dataset is constructed using data from all four QLFS datasets in the year. The dataset also includes a number of variables (including income) that are not available in any of the QLFS datasets from 2010.

KIND OF DATA

Sample survey data

UNITS OF ANALYSIS

Individuals

Scope

NOTES

Individuals: labour market activity, labour preferences, labour market history, demographic characteristics, marital status, employment status, education, grants, tax, income.

Coverage

GEOGRAPHIC COVERAGE

The survey had national coverage.

GEOGRAPHIC UNIT

The lowest level of geographic aggregation is by Province.

UNIVERSE

The QLFS sample covers the non-institutional population except for those in workers' hostels. However, persons living in private dwelling units within institutions are enumerated. For example, within a school compound, one would enumerate the schoolmaster's house and teachers' accommodation because these are private dwellings. Students living in a dormitory on the school compound would, however, be excluded.

Version 2

Sampling

Sampling Procedure

Each year the LMDSA is created by combining the QLFS waves for that year and then including some additional variables. The QLFS master frame for this LMDSA was based on the 2011 population census by Stats SA. The sampling is stratified by province, district, and geographic type (urban, traditional, farm).

There are 3324 PSUs drawn each year, using probability proportional to size (PPS) sampling. In the second stage Dwelling Units (DUs) are systematically selected from PSUs. The 3324 PSU are split into four groups for the year, and at each quarter the DUs from the given group are replaced by substitute DUs from the same PSU or the next PSU on the list (in the same group). It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for two quarters and a new household moves in, the new household will be enumerated for two more quarters until the DU is rotated out. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (or unoccupied).

Deviations from Sample Design

Response Rate

For more information see the statistical release that accompanies the data.

Weighting

The sampling weights for the data collected from the sampled households are constructed in such a manner that the responses could be properly expanded to represent the entire civilian population of South Africa. The weights are the result of calculations involving several factors, including original selection probabilities, adjustment for non-response, and benchmarking to known population estimates from the Demography division of Stats SA. For more information see the metadata document.

It appears as though Stats SA also calculated panel weights for the households that were repeatedly sampled across quarters. These are not released with this version of the LMDSA.

Weighting adjustments were used for household non-response.

Questionnaires

Overview

Data Collection

Data Collection Dates

Start	End	Cycle
2019-01	2019-12	N/A

Data Collection Mode
